Here is the New Self Starting Typewriter

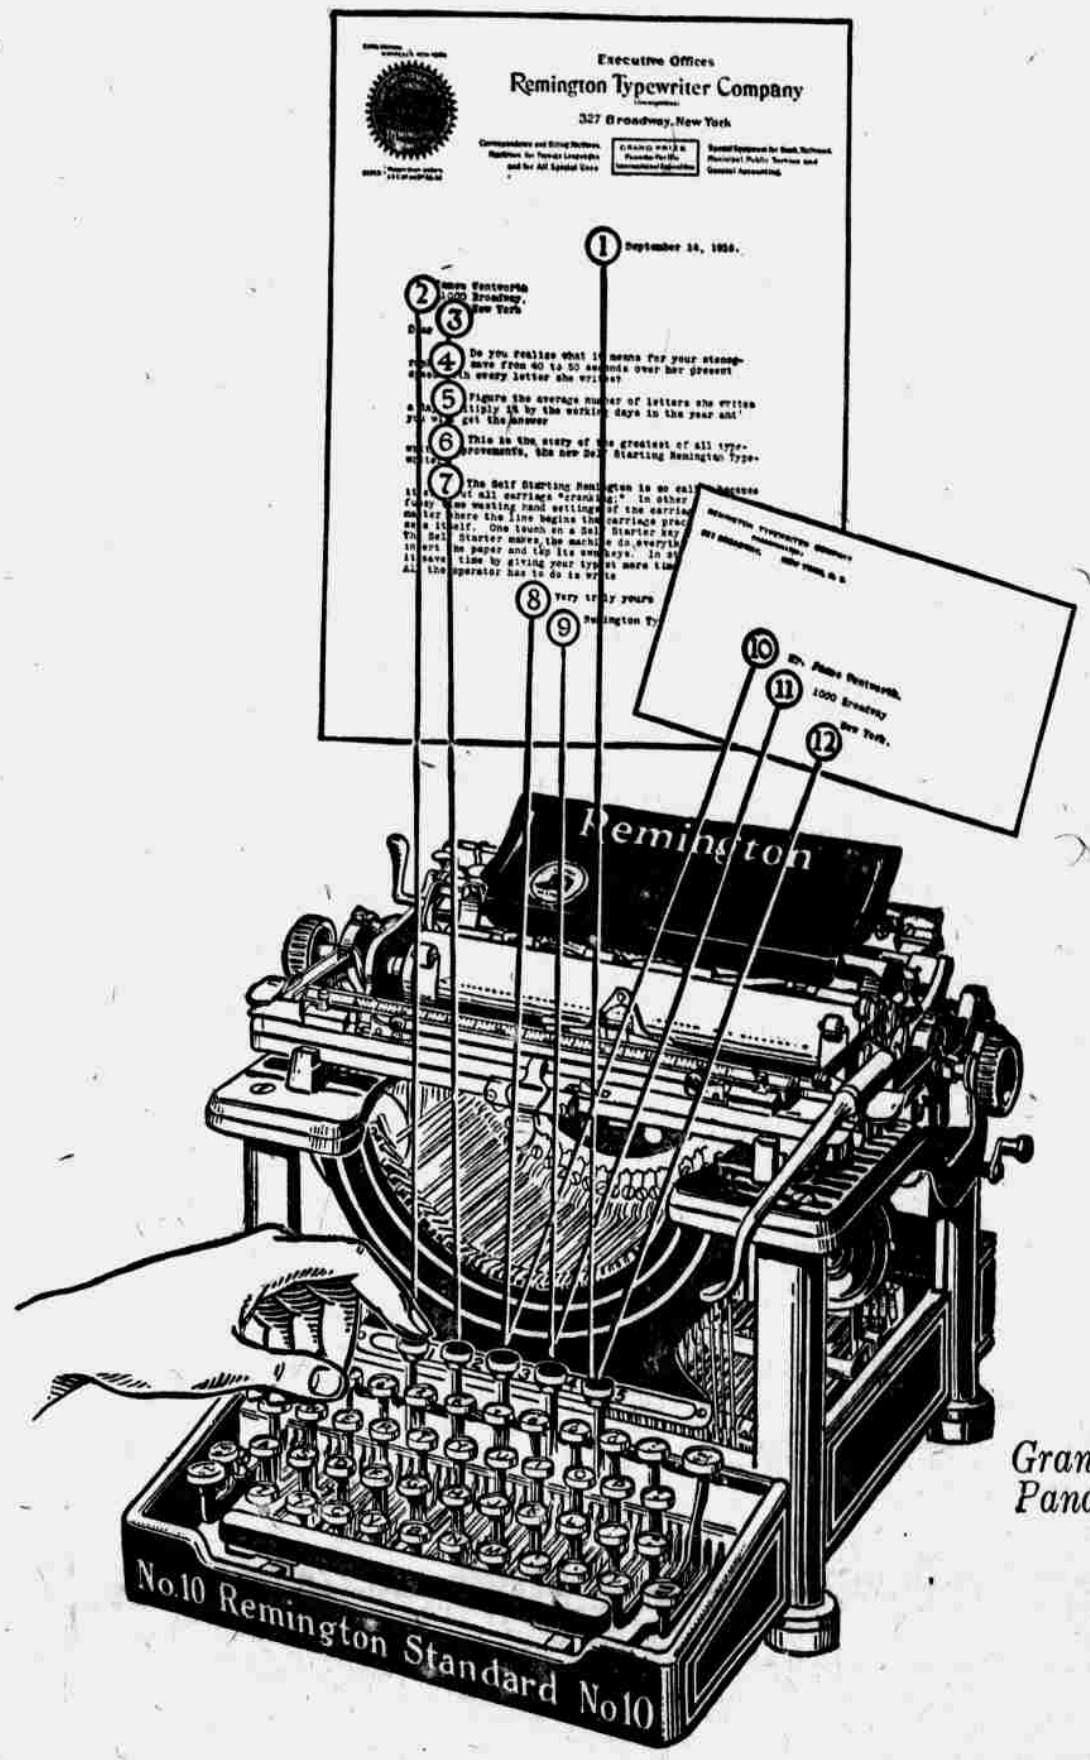
A new era in typewriter construction. Protected by Remington patents. A built-in part of the machine. No added cost.

It saves 15% to 25% on ordinary correspondence.

Its time-saving is automatic on every business letter.

The machine does things your typist is doing now.

It will pay you to look into it.



12 Flying Starts

Until the invention of the Self Starter there were, on an average, 12 "slow-down" places in every letter with envelope.

The Remington Self Starter turns these "slow downs" into flying starts. Saves several seconds' time several times per letter. This time-saving soon pays for the machine.

Also, it standardizes the appearance of your correspondence. Gives every letter shipshape, businesslike uniformity.

See what it will accomplish on your own work.
