SAW CRIME IN DREAM.

Girl Curiously Forewarned of the Murder of Her Own Chum. Less than half an hour before Miss Josephine Rummelhart, of this city, was attacked and murdered by an unknown colored man, her intimate friend and roommate, Miss Mary Liphardt, foresaw the tragedy in a dream, says an Omeha correspondent of the Washlugton Post

Springing from her bed about 10:30 o'clock on the night of the murder, her face as pale as death, a look of terror in her wide-open eyes, Miss Liphardt cried:

"Josephine Rummelhart is being murdered! Help! Help! Ob, can no one save her?"

Several women, attracted by her cries, ran to Miss Liphardt's room, finding her excitedly pacing the floor, wringing her hands and declaring that ber friend and roommate had been

"I saw a colored man knock her down, drag ber into an alley, and there cut her throat," she cried. "Oh, it is awful, awful, awful!"

"You have been dreaming, Mary," said one of her friends. "Miss Rum melhart has gone out to spend the evening with Miss Anderson, but she is all right and will return to her room 800D.

"Yes; I have been dreaming," said Miss Liphardt, "but the dream was so vivid and I saw it-all so plainly that It seems true to me yet." The young woman was persuaded to

return to her bed on the assurance that Miss Rummelhart would soon return to her room, and by and by she fell asleep. When she awoke in the morning she instantly recalled her dream of the

night before, and, glancing at Miss Rummelhart's bed across the room from her own, she was startled to see that it had not been occupied.

and picked up the morning paper. The first words that caught her eye were those in a "scare head" telling of the cold-blooded murder of Miss Rumraelbart the night before.

The murder had been committed less than half an hour after Miss Liphardt had awaken the household by springing from her bed crying that her friend by George, I'd-er-er. Curious kind of and roommate was being murdered. Only two blocks from the boarding house and seven blocks from the heart of the business district of Omaha the young woman, on her way home from blood disorders; who want new, rich the house of a neighbor, had been knecked down by a negro, dragged, bleeding and unconscious, to a dark spot in the rear of one of the houses in the neighborhood. The negro cut her throat with a razor and then made his

> Two young men, W. B. Hugues and Pau! Lowe, lodging in the house in the rear of which Miss Rummelhart was left by her slayer, attracted by the dy ng woman's moans, discovered her a few minutes after the negro fled. They promptly notified the police of the discovery and the young woman was taken to a hospital, where she died a few hours later without regaining con-

> A curious case of mistaken identity occurred the morning after the murder. Hundreds of people went to the morgue to see the body of the murdered woman. Among those who went there was Charles Ward, a veteran street-car conductor of the city. The moment Ward glanced at the face of the dead woman he grew deadly pale, staggered back as if he had been shot and cried that the body was that of his daughter.

plained that as yet the home cistern Miss Wilkes Ward. Bowed with grief Ward set out for would hold all of ours .- Wisconsin his home to break the dreadful news to his wife. On opening the door to his house the first person to greet him was the daughter whom he had believed to be dead. She had gone to the theater with a young woman friend the night berore and, missing the last car for her home, had spent the night with her friend, arriving home a few minutes before her father arrived there to break to his wife the news of her death.

LIKED BUCKWHEAT CAKES.

Azecdote of Matthew Arnold's First Encounter with Them. Tradition associating great men with

griddle cakes is rare, says the Philadelphia Bulletin. An anecdote told of Matthew Arnold and some American buckwheats possesses the piquancy of Total\$1 00 All for 12c postpaid in order to introthat old tale of King Alfred and the peasant woman's burned cakes.

It was at breakfast at the home of Dr. Edward H. Magill, then president of Swarthmore College, that the greatest critical mind of his age was confronted with the vital problem of whether he liked this distinctive Amerlean vland.

"Culture," Dr. Arnold was remarking, "is indicated by our ability to conceal the first sentiment with which an

object inspires us." State of Ohlo, City of Poleco, Lacating, Sancting, Sanct At this point he was interrupted by the entrance of a maid, who placed before the author and his wife a plate of buckwheat cakes. Mr. Arnold and his wife eyed them in the distrustful manenr of some ancient Roman, fresh from his banquets of lampreys and flamingoes' tongues, confronted for the first time with the unsophisticated fare of the Gauls. It was plain they had never seen them and never wished to see them again.

> "Take one, my dear," he said, turning to his wife, as he at last decided to try one; "they're really not so masty as they look."

"Thee was saying, was thee not, Mr. Arnold," Dr. Magill said slyly, "something about the degree of culture being indicated by the ability----

But here Mr. Arnold saw the point,

How Lizards Fool Hawks. The peculiar brittleness of their talis is sometimes an advantage to certain lizards. Perching head downward on a rock, the diamond-tailed gecko, for example, is often selzed by a hawa, when the tall sasps off, and the animal calmly wriggles away to grow another.

When it has been thoroughly demonstrated that a thing burts, various men appear who offer to do it without pain, but they cannot.

And a woman's face may be her hus-

band's misfortune.

Fine, well-rotted manure will give rich ness and humus. If the sand pit b bandy the farmer can haul a few loads when not busy and scatter that over a portion of the garden if it needs warming up. By all means keep the soil in fine tilth, so the wheel hoe will work easily. Poultry and sheet manure are good for the garden. Coarse manure or weed stalks half plowed under are an abomination and cause much loss of time and crops.

A small amount of sulphur fed to the poultry during the winter will keep the

Keeping the skin of the work horses clean enables them to sweat freely, and this is essential for their health,

The mare that is suckling a colt is doing a double duty and should not barley chop, about four pounds per be required to perform as much hard labor as the other borses.

Bulldogs and six shooters are on about a par when it comes to finding a place for them in the home. Both are nastly, ugly propositions and as a general thing prove to be "loaded." A great deal of hay is sent to mar-

ket that is full of weeds. Such hay

brings the lowest price, and also indicates that the farmers who ship it are not only carcless, but also ignorant of the true methods of farming. The wood lot, whether of artificial or natural planting, is best handled

by a careful and judicious thinning, which thus gives the remaining trees Dressing hastily she went downstairs more room for growth as well as an increased supply of light and moisture. Were it not for the operation of a

law of natural selection and an elimination of the fruit of weaker vitality, apple trees would be broken to the ground could they furnish nourishment sufficient to bring all the fruit that sets to maturity.

Where the garden is plowed without being manured and not rich enough to produce a good crop of vegetables next season it is best to cover the plowed ground with a coat of manure in the fall and work it in with disk and cultivator in the spring.

Statistics say that in the State of Indiana the percentage of loss annually from disease in swine herds is twice as great as in other classes of farm animals. The records further show that these losses reach an average figure of \$2,500,000, while the total in one single year was estimated to have been near-Je \$5,000,000.

Discussing the German method of planting potatoes, with ample distance and with eyes under, so that the stems may grow widely apart, a foreign grower asserts that it not only saves the seeds, but produces more and better crops. Often a dozen tubers are used where only one would be enough, bu It is difficult to make some new gardeners believe it.

that have been grown on river or creek bottom land. The great depth and richness of soil there always produce coarse growth of wood and long etc., I disprove the color idea entirely taproots, which must be cut off in re- as having anything to do in indicating planting. The tree never fully recovers from the effects of this. This is especially true of trees intended for planting on high land.

Too much wood is usually left to grapevines. The old vines need to be pulled from the trellis and all of the old vines trimmed away except three or four shoots eighteen inches to two feet long, owing to the age and strength of the shoot.

Where it is possible to do so there is no way of keeping the growth of grass down along the tree rows in the orchard that excels a heavy mulching with coarse manure or straight oat straw. This mulch will not only serve to check and practically prevent the growth of the grass, but will keep the ground in a moist condition favorable to the growth of the trees. While mice and rabbits might find a harbor in the straw during the winter months, damage from them can be guarded against by wrapping the trees with wire screen or wooden shields.

Irrigating Sweet Corn. One farmer in Winchester, Mass., who grows ten acres of sweet corn plants his corn five feet apart. He irrigates the corn with water pumped by one of those pumps which deliver 120,him not over \$5 a day to supply the water to the corn.

His corn rows are about 600 to 700 feet long, and the water will run from one end of the piece to the other without going out of sight. As soon as his corn is picked, about the 25th or the 28th of July, he sells the whole thing to milkmen in the neighborhood, plows the ground and plants it to celery five feet apart, and he irrigates for the celery in the same way.

How to Treat Garden Soil. There is no other plece of ground that has to grow such a variety of crops as the garden patch. It is hard to find a small plot that will be ideal for all plants. There are plants like the tomato, melon and bean that would likewise be benefited by such a soil. There are others, such as late cabbage, parsnips, beets and other slow-growing plants, that would be better on a heavy soil with a north slope. As a light soil is more apt to dry

out in midsummer, it is advisable to have water handy, to turn on if necessary or to give constant cultivation to form a dust mulch in case the land is to be occupied in midsummer. By planting to have the extra early truck to the handler: the animal is liked, on the sandy south slope it will be gone and more especially if it is accompanin time to put melons, early sweet corn | ted by a symmetrical form. Long pracand similar crops on the same ground. tice is required to appreciate a fine

The garden soll should be rich. touch.

How to Feed a Dairy Cow.

A practical dairyman writes the Jersey Bulletin on feeding his cows. He says: "Our herd numbers in all fifteen head. Our cows are grained the year 'round, have the run of pasture in summer, and are well housed in winter. Our summer ration for a dairy cow is diem. In winter we use shredded fodder for roughage; grain ration, eight pounds per day per cow of a mixture of cornmeal, barley meal, mixed in the required proportions to produce a feed which would analyze one part of pro tein to six of carbohydrates. Our cows are not allowed to stand alongside a straw stack for shelter when the thermometer shows something less than zero, but are kept in the stable, and even watered there."

Growing Apples on Rough Land. The owner of a hillside in Pennsyl vania who found his land too rough to cultivate at a profit writes that he has found a way out by planting fruit trees. He thinks the loose stones are no injury to the trees, but on the contrary rather a benefit, as they serve as a mulch to belp obtain moisture. He plants his apple trees thirty-six feet apart, thirtythree trees to the acre, the distance being great enough because the trees do not grow quit so fast as in tillage land. His pear trees he plants fortyeight to the acre, thirty feet apart, and his peaches nineteen feet apart, 134 to the acre. He reckons on 200 bushels an acre from his apples or pears, and 300 baskets of peaches. The land is not cultivated at all, but the trees were mulched and fertilized when young and protected from borers and mice. The soil is fairly good, but is supplied with plant food enough to keep the trees in vigorous growth. In this way the hillsides are profitably used, and the best part of the farm given to general crops and dairy farming. The trees are headed low, since cultivation is not required, and the fruit is easy to pick, while spraying can be done with slight inconvenience.

Denounces Cross-Breeding. At a recent live stock meeting in Topeka, in the cross-breeding of the Shorthorn cows with a Hereford bull, Col. J. W. Robison denounced it as a step backward. He said:

"Take the best Shorthorn bull in America and the best cow of any other breed and cross them and you have in their produce destroyed the quality and value of both breeds. You have introduced the system of scrub breed-A Western orchardist says: It is not ing, and you cannot correct or undo in a wise policy to buy trees for planting a lifetime what you were able to accomplish in one illy-advised cross.

> "As to the color in certain breeds, Shorthorn cattle, Percheron horses, quality in the animal. In horses the demand is for black color west of the Missouri river and gray back east in Illinois, Ohio and Pennsylvania. One is as good as the other color, only a matter of fancy. We must raise purebred stock on our high-priced land. The scrub animal will not pay, and the cross breed is nothing but a scrub when viewed from a breeding standpoint.

"In Shorthorn cattle the color will not materially affect the quality of the animal, because all colors-red, white, roan, red and white or spotted-prevail, and the matter of color in this breed of cattle is a fad or fancy. Any one of these colors, or all of them, may come from the same parents."

Judging Live Stock.

In the fat stock shows, and also it the large stock yards, experts can quickly select the best animals for the butcher, and, according to the ability of the judge, he should be assisted to select an animal by the sense of feeling, and, in judging cattle, the touch, as well as the eye, is, therefore, brought into requisition. Except in regard to certain points of conformation and color, some experts are by no means sure that "touch" is not the most important qualification. The skin and the fiesh 000 galllons a day. He says it cost can only be fully examined by touch or handling in ascertaining if the bones are well covered with flesh, and also If the latter is soft to the touch and ample in quantity on the examined points. The squeeze of the palm of the hand is not so delicate as the touch of the tips of the fingers; the former ascertains the quantity, the latter judges the quality. The touch may be hard or mellow, thin or harsh, good or bad, as it is frequently termed. A slow feeder is said to be marked by having a thickset, hard, short hair, which constitutes a bad touch; a thiu, meager, papery skin, covered with thin, silky hair, though opposite of the one just mentioned, does not constitute a good touch, but is indicative of weakness of constitution, though probably of good breeding qualities, A good touch will be found in a thick, loose skin, on a layer of soft fat, yielding to the least pressure, spring back toward the fingers like a piece of soft, thick chamois leather, and covered with thick, soft, glossy hair, which looks rich and beautiful and seems warm and comfortable to the animal. A curly pile of soft hair indicates a vigorous constitution and also a propensity to fatten. The sensation of a fine touch is very grafffying

TIRED AND SICK YET MUST WORK

"Man may work from sun to sun "Man may work from sun to sun but woman's work is never done,"
In order to keep the home nest and pretty, the children well dressed and tidy, women overdo and often suffer in silence, drifting along from bad to worse, knowing well that they ought to have help to overcome the pains and aches which daily make life a burden.

It is to these women that Lydia

make life a burden.

It is to these women that Lydis
E. Pinkham's Vegetable Compound,
made from native roots and herbs,
comes as a blessing. When the spirits are depressed, the head and back
aches, there are dragging-down pains, nervousness, sleeplessness, and
reluctance to go anywhere, these are only symptoms which unless
heeded, are soon followed by the worst forms of Female Complaints.

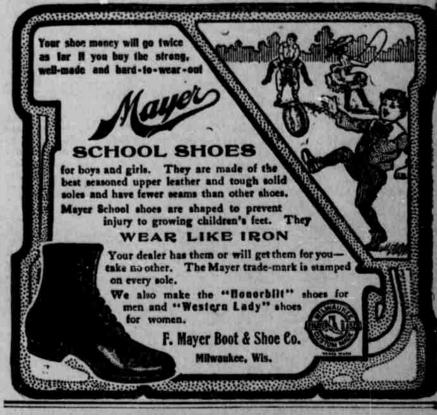

Lydia E. Pinkham's Vegetable Compound keeps the feminine organism in a strong and healthy condition. It cares Inflammation. Uterration, displacements, and organic troubles. In preparing for child-birth and to carry women safely through the Change of Life it is most efficient

Mrs. Augustus Lyon, of East Earl, Pa., writes:— Dear Mrs. Pinkham:—"For a long time I suffered from female troubles and had all kinds of aches and pains in the lower part of back and sides, I could not sleep and had no appetite. Since taking Lydia E. Pinkham's Vegetable Compound and following the advice which you gave me I feel like a new woman and I cannot praise your medicine too highly."

Mrs. Pinkham's Invitation to Women

Women suffering from any form of female weakness are invited to write Mrs Pinkham, at Lynn, Mass Out of her vast volume of experience she probably has the very knowledge that will help your case. Her advice is free and always helpful.
