GOOD SHORT STORIES

~~~~~~

Before dinner, at the house of a rich banker, in Florence, Colonel (afterward the Earl of) Dundas had said some sharp things about the crudities of Americans. Notwithstanding this rudeness, it fell to his lot to take Mme. Bonaparte (Betsy Patterson) in to table. He impertmently asked Mme Bonaparte If she had read Basil Hall's book on America, in which he pronounced all Americans vulgarians "Yes, Colonel Dundas," she answered, "but it did not surprise me in the least. If my compatriots were descended from the Italians or Spanish, any display of low breeding might asionish me, but being the direct descendants of Englishmen, it is natural enough that they should be vulgarians."

Commercial travelers find most of the natural curiosities along the lines of travel. This is a story told by one after a trip through Southern Canada. Being impatient to get out of a sleepy little town I ascertained the time of the outgoing train and hurried down to the station. After a while an object slowly emerged from the distance and slunk up alongside. I boarded the solitary coach, and after a tedious wait the engine began to gasp feebly, the old coach creaked a little, but the train did not move. I was about to get out to see what was the matter when the forward door of the coach was suddenly flung open and a head popped in. 'Hey, you,' said the engineer, leering at me, 'climb off till I git a start, will

On the first night of the representa-

tion of one of Jerrold's pieces, a successful adapter from the French ral-Hed him on his nervousness. "I," said the adapter, "never feel nervous on the first night of my pleces." "Ah, any boy," Jerrold replied, "you are always certain of success. Your pieces have all been tried before." He was seriously disappointed with a certain book written by one of his friends. This friend heard that Jerrold had expressed his disappointment, and questioned him: "I hear you said was the worst book I ever wrote." "No. I didn't," came the answer; "I said it was the worst book anybody ever wrote." Of a mistaken philanthropist, Jerrold said he was "so benevolent, so merciful a man-he would have held an umbrella over a duck in a shower

A certain lady in Parls gives periodical dinners, at which assemble most of the best-known wits and literati of the day. The rule of the mansion is that while one person discourses, no interruption whatever can be permitted. It is said that M. Renan once attended one of these dinners, and, being in excellent vein, talked without a break during the whole repast. Toward the end of the dinner, a guest was heard to commence a sentence; but he was instantly silenced by the hostess. After they had left the table, however, she at once informed tinguished individual that, as M. Renan had now finished his conversation. she would gladly hear what he had to say. The guest enodestly declined; the hostess insisted. "I am certain it was something of consequence," she said. "Alas, madame," he answered, "It was, indeed; but now it is too late! I should have liked a little more of that iced pudding."

## AUTO RACING BY COWBOYS.

#### Unwritten Rules Which Are Rigidly Enforced in Western Texas.

There are certain unwritten rules that must be rigidly observed by automobilists in the ranch region of western Texas, a Brady (Tex.) dispatch to the New York Sun says. The joy rider soon comes to grief in this part of the country.

The automobile is in general use in the range territory, but the cowboys in muddy weather. do not permit any undue libertles to be taken in running the machines. The shooting up of automobiles by cowboys is a common practice. This enethed of bringing an automobile to a stop is not used unless the cowboy thinks that he has not been treated with proper consideration.

few days ago. Dick Davis started from here on a thirty-mile trip to his ranch in Concho County. He was driving his automobile himself and had no passenger. He was in a hurry to reach the ranch and did not observe the rules of the road as laid down in this part of the country.

An instance occurred near Brady a

He was spinning along at a high speed when he came upon a drove of mules in charge of a man on horseback, who carried a rifle in a scabbard. Instead of bringing the automobile to a stop when he came upon the mules Mr. Davis sped right past them, causing a stampede. A moment later three qack reports of a rifle were heard and the automobile's two rear tires

"The bullets knocked the machine completely out of commission," Mr. Davis said in telling of the affair. The man with the mules got his stray animals together and continued with them right down the road. I knew that he was right, so I didn't try to round him up."

A man from Ohlo opened a real estate office at Sweetwater recently and bought a big automobile in which to convey customers over the country. He had an experience on his first trip that taught him a lesson.

He had four Missouri land prospectors in his automobile and was on the way to look at some land about forty. miles south of Swestwater. In order to make a short cut to the property he | Zeke or L" was crossing a big pasture. In the distance could be seen large numbers of cattle which were being driven by

4015 DOS K. round up, did you?" inquired the real estate dealer.

There was a chorus of answers in the nemative.

"Well, that's what's going on over

direction of the gathering herd of cattle and soon attracted the attention of the cowboys. They gesticulated at the auto, but the signs were not understood by those at whom they were directed. The cattle were beginning to snort and were on the verge of a stampede when two of the cowboys pulled their six shocters and began to fire at the automobile. The bullets whizzed around the wheels.

"Here!" yelled one of the land prospectors to the real estate dealer, "get us out of here quick!"

The real estate caan wanted to get away from the scene as badly as his companions and he lost no time in turning the automobile around and spinning away as fast as the machine could go.

Many of the ranch bronchos are not sed to automobiles, and when one of these animals is being ridden by a owboy and comes upon an automobile in the road the chauffeur who knows the customs of the region stops and keeps the machine quiet until the horse and rider have gone by and are a safe distance on the other side.

#### 20000000000000 THE UPSTART.

becereever

As a medical missionary, stationed or sixteen years in northwestern inlia, near the Afghanistan frontier, Dr. f. L. Penuell had his share of peril and adventure, which he has recently recounted in a volume entitled, Among the Wild Tribes of the Afhan Border."

As a medical man, Dr. Pennell had his ups and downs with the native doctors, who sweat their patients and burn sores with lighted oil, but have no faith in Western treatment. They also bleed and purge; but gradually the new-fangled treatment was accepted, and grateful converts were made at the Bannu dispensary.

As a missionary, Dr. Pennell had to contend with the mollahs, who are argumentative and great browbeaters; and very often, he confesses, he got the worst of it by verdict of the ragged crowd that hemmed in the theologians.

With a certain mollah, who regarded the Christian medicine-man as a rival, Dr. Pennell had an amusing enounter.

"Do you know," asked the mollah, what becomes of the sun when it sets

every day?" The doctor gave the native circle the

clentific explanation. "Rubbish!" exclaimed the mollah. We all know that the fires of hell are under the earth, and that the sun passes down every night, and therefore comes up blazing hot in the morn-

All Dr. Pennell's accounts of natural phenomena were ridiculed by the mollah. Then, turning to his people, he said, with contempt in his face and

"It is evident that I shall have to teach him everything from the beginning."

#### LAST OF THE STAGE COACHES.

One Used for Carrying Passenger in Early Days of Texas.

After standing in the alley west of Patterson's livery stable since 1873 the Some of the Great Achievements on stage coach Sam Houston was torn to pieces recently and the timber cast in a waste heap, says the Austin greatest railroad reconstructionists Statesman, The Sam Houston was this country has known. When he the victim of city legislation, it hav- took over the Union, Central and ing been ordered moved from the al- Southern Pacific he foresaw that the iey, but being in such a dilapidated entire lines would have to be rebuilt condition it could not be moved. The He put his whole energy into the task coach was torn to pieces and another of expending many millions of dollars relic of the early Texas days has pass- for that purpose; some say \$20,000, ed into history.

If the old stage coach could talk it curves; tunneled mountains at their could tell of some hair-raising events bases, where the roads formerly went that would probably make the "blood over them; put steel viaducts and and thunder" stories look like 30 cents Mex. It made its first run between Austin and Brenham in the year 1841. when Texas was filled with Indians steel rails. and bad men. Six and eight mules were driven to the old coach, six being driven in good weather and eight

In its day the Sam Houston was the scene of many a fight and holdup. The wood was marked in numerous places by bullet holes, which were all that remained in history of many of the fights in which the coach was the center of battle. Guards were always carried along with the coach in the early days to prevent Indian attacks and hold-ups by bad men who wanted to rob the mall.

Some time ago a movement was started to have the Sam Houston preserved as a bistoric relic of early Texas days, but the move failed to bear fruit and now it is too late.

The Sam Houston made its last run or small mountains, torn down by from San Antonio to Austin in 1873. It was abandoned and had to get out of the way, for the railroad took its place, and now it had to be taken out of the alley because it was deemed unsightly and in the way.

## Self-Condemned.

The story below, found in the El mira Advertiser, is a homely illustration of the power of suggestion. An lowa farmer employed a boy to guard his strawberry patch from birds. The berries-fancy fruit as big an ponches -kept disappearing, and the man began to suspect the boy of eating them. So one morning he visited the patch, and looking it over, said: "I know you don't touch these ber-

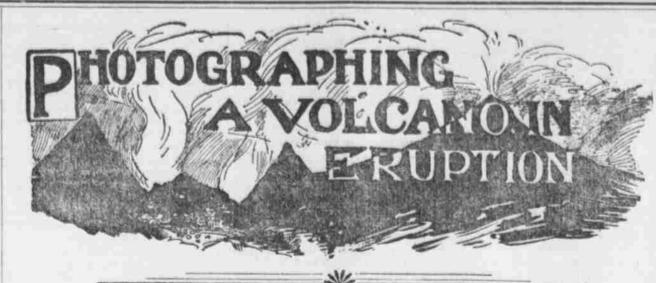

ries, my lad, but Zeks says you do. To day I'll test you just to convince Zeke that he's wrong." He took out a small lump of chalk

and pretended to chalk the boy's lips; but really it was only his finger that he rubbed over them. "Now," said he, "when I come down

And with apparent carelessness he tossed the chalk on the ground.

load an diransport the rocks. On his return some hours later it was plain who was right. The hoy's tute the approach to the west end of witness-box in patient despair. Then, "None of you men ever saw a cattle lips were chalked with a thick, white, the treatle. The top of the cut-off is on the authority of a writer in the

A Fall of the Right Kind. the quaint philosopher. "Even the beams. The structure is gradeless, and you mean by that just how you are The automobile was headed in the | fellow who fell into a fortune,"

ESDAY, July 1, 1899, reports reached Honolulu, Hawaiian Islands, that the volcano of Makuaweowee, situated at the summit of Mauna Loa, 13,675 feet high, on the Island of Hawail, had burst forth with all the fury of years gone by. I left with the intention of reaching the scene of ac-

tion, writes Frank Davey, by the most difficult route of all-right over the great mountain from the Kona side. The obstacles to be overcome may perhaps be imagined when I state that Mauna Loa is a volcanic mountain, nearly 14,000 feet high.

It was with great difficulty that I managed to get horses and mules from the natives, who knew the cond tio, of the country, for the animals inevitably get badly knocked about, their legs being terribly cut by the lava. A number of gentlemen arrived and expressed their desire to join me in the expedition. The first part of the journey was one of the most delightful rides I ever had. We rode for hours through magnificent tropical growths. There were giant ferns, some of which must have been thirty or forty feet high and three feet in diameter, groves of guavas, coco-nuts and other fruits, miles of wild mint and bright-colored flowers, and orchids of most delicate shapes. At dusk we reached the edge of the timber line, in a drenching

We resumed our journey at daybreak, over the most terrible country that can be imagined. We reached the summit just as it was getting dark. Near the center of the mountain top an area of about four square miles sinks to a depth of 1,000 feet. This is the great crater

We found that the worst outbreak was about 5,000 feet further down the mountain side. Walking across the congcaled masses or lava, one began to think that at any moment one was liable to drop through to the most horrible of deaths. Underneath one was a bottomless abyss of mud, sulphur and rock; and to contemplate being cast into that fearsome-looking take of fire and brimstone was not at all comfortable. Presently we reached a cone where the lava had piled up to the height of about 100 feet, then, bursting out at the side, disappeared into the ground, to reappear about a quar ter of a mile farther down and repeat its action. These cones averaged 200 feet in height, and we passed five "dead" ones. A sixth was still smoking, but was not active. No. 7 was belching forth huge volumes of steam and suiphur, Boulders that must have weighed a ton were being hurled high into the air as if shot from a cannon. Others followed to meet those coming

scattering molten matter on all sides. This flowed down the incline in cascades like water, showing red, yellow, blue and all the colors of the rainbow. It is impossible to describe the grandeur of the effect, and a knowledge of the force that was causing the display made one feel very small indeed. Some of the

down, and as they met they burst like explosive shells,

were belched forth were at a white heat. They went so high that they had time to cool and return to the vortex black.

The wind changed, and to our consternation we saw a cloud of sulphur blowing right across our path. These masses of vapor are so impregnated with sulphur and polsonous gases that it is impossible for any living thing to exist among them, and to get caught in their midst means death. Alarmed, we started to go around on the other side, but found the lava was too hot. We kept on until the lava began to move under our feet, and then made a number of attempts to pass that dend ly barrier of vapor, but were forced to return each time, nearly suffocated. Just at this critical moment I happened to turn round and saw an arch, as it were, in the swiphur smoke, where the wind was blowing it up from the ground. We had scarcely got through that arch

of clear air when down came the cloud again. Once past the danger point, we crawled along at our best pace. It was now night, and the only light we had was the lurid glare from the volcano. If it had not been for this we should undoubtedly have perished of cold and thirst, as we should have been compelled to stop walking. As it was, we dared not halt for any length of time, or we should not have had warmth enough to keen the blood circulating. All that night we crawled over the terrible lava. We fell down at intervals of about twenty feet, often breaking through the black crust, semetimes up to our waists, cutting ourselves on the sharp projection until our hands and legs were worfully lacerated. Almost as soon as we fell we dropped asleep; then, as we got colder, we would wake up and force ourselves on again for a few dozen yards or so, only to fall asleep, wake and struggle up once

At last it began to get light, but still we had come across no water, and that in our canteens had long since been exhausted. We hunted the depths and crevices of the lava, sometimes going down ten or fifteen feet, looking for water, only to be disappointed again

and again. Suddenly I saw a break in the lava nearly full of beautiful water. I leaned over the side, holding the canteen for a companion to fill. He went down a few feet, and then stopped. I motioned to him to fill the bottle, croaking, "Water." He did not look around, but mumbled, "I see no water," as if in a dream. Picking up a piece of lava, I tossed it down and cried, hoarsely, "There is the water!" But to my astonishment the pebble went down, down, out of sight, with no sound of a splash, into a fathomless abyas. The crevice was so deep that we could not see the bottom, and the shock of the discovery made me faint.

After a time we scrambled on again until we came upon a guide sitting upon the edge of a high crack, eating frozen snow; and tearing it with his teeth. We followed his example, not without pain, but the snow tasted good. The journey home was, comparatively speaking, easy, but the memory of that night amidst elected masses were as large as a horse, and when they the lava will last me to my dying day,

THE FIRST DAY AT SCHOOL.

I am 6 years old. It is my first day in school. It is all so strange, I guess I want to go home right off. The boys all stare and stare. The gicla all smile and smile. The room is so big. There is such a lot of books and desks and chairs. There is such a big crowd. They say I will not be let go home for two hours. I know my A B C. Ma taught me. But there is a great big lot in all them books, and I have got to learn it all. Then they will teach me out of some more big books, years and years, and when I am as big as Ma, I will be done with school. Oh! the world is so big! It takes so long to grow up- I am such a wee thing in this big crowd of boys and girls I feel lost. I want my Ma. I want to go home. Now, I guess I will cry.-Detroit Times.
