

This illustration shows the ordinary woman's shoe with the extra high and narrow heel now so popular, showing how the weight is thrown on a twisted ankle, and the center of gravity falling in front of the heel, over the hollow of the foot, straining the foot and in time breaks down the arch. The diagram of the sole shows how the foot must twist in getting into the shoe.

# TREADEASY

## THE GREAT HEALTH SHOE FOR WOMEN

They have full rubber heels; not just a life such as your cobbler puts on, but a full heel made from live rubber—springy and resilient. Treadeasy shoes have the regular leather insole, the same as any other shoe, but between this insole and the outsole, is inserted a soft filling or cushion of cork, which gives under the pressure of the foot allowing the insole to adjust itself to the exact shape of the bottom of the foot, giving a soft, even pressure on every part of the sole, and preventing undue pressure on any part, which is the cause of corns and hard callouses. Cork, being an absolute non-conductor of both heat and cold, the feet are kept as an even and natural temperature at all times and neither perspire in summer or are cold in winter.

This illustration shows how the Treadeasy shoe made on the Treadeasy hygienic last, straightens and supports the ankle, and how the heel, being large and properly placed, brings the weight of the body squarely over the heel where Nature intended, giving you better balance and preventing the twisting strain on the ankle and arch of the foot. The sole shows how the last is made straight from heel to toe, the same as the natural foot.

The potato digging season is at hand and some men are wondering what to do with their potatoes. The last crop report for the United States shows that the potato crop in general will yield about the same this year as last. One reason for this has been the great loss of potatoes in many potato growing districts due to wet weather.

A condition has existed here for some time that has placed the potato growers at the mercy of the potato buyers. The large loss of potatoes due to dry rot in storage has caused the potatoes to be generally placed on the market at digging time. This has resulted in the generally low price of potatoes at this season.

Some hints on storage of Potatoes. The cellar should be thoroughly cleaned out by removing all dust, rubbish, trash, etc., and properly disinfected. Formaldehyde solution applied on the floors, and walls, or formaldehyde gas are efficient and non-poisonous disinfectants.

The next thing, proper ventilation should be supplied. This is about the most neglected of all things in our potato cellars. Without ventilation potatoes heat and bring about a condition favorable to storage diseases. This may be provided for by building bins 8 feet wide with hollow wall partition, made by nailing narrow boards 1 1/2 inches apart on each side of the upright, or by placing ventilating tubes a foot square, 8 inches apart each way, constructed by using narrow strips, and placing them 1 1/2 inches apart.

In digging, as much care as possible should be exercised to prevent bruising and cutting the potatoes. This offers a fine means for disease to enter the potato. Potatoes should be allowed to dry enough in the field so that most of the external moisture and dirt will come off. Potatoes should be run over slat chute 8 feet to 10 feet long, so that dirt and very small potatoes will not go into the cellar. This will prevent large quantities of dirt from going into the cellar and also gives more free circulation of air. Potatoes should be placed each day in a layer on top of those of the day previous, rather than to pile the potatoes the height of the cellar at one end, and proceed to the other in the same manner.

Potatoes in storage to prevent development of storage diseases, sprouting and keeping the potatoes in good condition should be kept cool. It is desirable to keep the potatoes at a temperature of 35 degrees, and not lower than 32 degrees. All potato cellars should be provided with a reliable thermometer.

Loss in storage last winter in Box Butte county ran as high as 75 to 83 per cent due to the dry rot. The following method of treatment by which the loss due to dry rot is largely prevented is recommended by the Department of Agricultural Botany:

**Formalin Solution**  
The tubers are placed in sacks and dipped for two hours in a solution of one pint of formalin to thirty gallons of water. The potatoes should then be thoroughly dried before being placed in storage. This method requires considerable extra work if the potatoes are not sacked as they are picked in the field.

**Formaldehyde Fumigation**  
This must be done in a cellar or other room which can be rendered practically airtight. The potatoes should be placed in sacks or crates, and these so arranged as to permit of free circulation of the gas. If left on the floor the potatoes should not be over one foot deep. Sprinkle the floor, but not the tubers, with water just before fumigating. Use 3 pints of formalin and 23 ounces potassium permanganate to each 1,000 cubic feet of space in the cellar. Place the potassium permanganate in a large shallow pan, in the center of the cellar, and pour in the formalin. Stir a few times and quickly leave the cellar and close the door. After 24 hours the doors may be opened to allow the gas to escape before entering the cellar.

**PRECAUTIONS:** 1. Place the pan so that the solution does not boil over on to the potatoes.  
2. All undesirable potatoes as to shape, and external appearance of disease should be discarded and not used to take up room in the cellar.

Hopeing that you may be able to use this information, I am  
Yours very truly,  
F. M. SEIDELL,  
County Agricultural Agent,  
U. S. Dept. of Agriculture.

## What Will YOU Do At 50?

Have you ever thought what will become of you when your earning capacity is waning?

At 50 will you still be working for a low wage or enjoying a good income?

That depends upon what you are doing NOW to secure the training that will steadily advance you in position and salary during the coming years. Only training will put you in the income class.

To learn how you can receive this training without giving up your present occupation, let the International Correspondence Schools advise you. All you have to do is to mark the coupon as directed and mail it today. There is no charge for this advice. No matter who you are or what your present occupation is, the I. C. S. has a way of helping you. It is an institution of experts—experts in helping poorly paid men succeed. Only your spare time in your own home is required. You do not lose an hour of work or a dollar of pay. This coupon is the greatest opportunity in the world for you to secure a happy, prosperous, and successful life, for it is an opportunity offered by an institution backed with a capital of six million dollars, whose sole business for 22 years has been to provide ambitious men and women with salary raising training.

Don't neglect practical opportunities for promotion. Mark and mail the coupon NOW.

## Telephone Rate Problems

To give good service it is essential that our telephone plant should be well constructed, kept in good repair and efficiently operated, and that extensions and improvements should be made from time to time to take care of new patrons.

Our telephone rates are as low as possible and yet pay living wages to our employees, pay our taxes and other expenses, and finally earn for our present stockholders enough interest on their investment so we will be able to get new money for extensions and improvements.

## Telephone Costs Going Up

For some time the price of telephone equipment has been increasing, and in some localities there has been a feeling that we should pay higher wages or allow shorter working hours.

These conditions have made it a serious problem for this company to get enough money at the present rates to pay expenses and earn a fair rate of interest for the men and women who have their money invested in the property.

NEBRASKA TELEPHONE COMPANY

## THE "PRUDENT" YOUNG MAN LEARN ALSO TO PUT HIS MONEY IN THE BANK AND KEEP IT THERE

A FINANCIAL education is one sort of an education every man can have. He can teach himself to SAVE and prosper. The first lesson is—START a bank account; the second lesson is—keep on increasing the balance to your credit. This is easy if you will only ACT. If you have got only ONE DOLLAR in your pocket just try putting it in our bank and see how good it makes you feel.

Make OUR bank YOUR bank.

## SILLO AND DAIRY TRAIN IS COMING

VIII Be Here Saturday Night, October 9, and Demonstration to Be Sunday Afternoon

### SPECIAL TALKS AT SCHOOLS

The special silo and dairy train, which is being operated jointly by the International Harvester Company and the Burlington railroad, will pull to Alliance Saturday night, October 9, and will remain here until the following Monday morning, at 10 o'clock. This was agreed upon Wednesday noon when a number of the business men met at the city hall to discuss the matter with C. B. Lamson, representing the International Harvester Company, and H. W. Campbell, industrial agent for the Burlington railroad, who had come here to make the necessary arrangements.

This train will be made up at Thermopolis, Wyo., and one car will be occupied with an exhibit from the Wyoming state agricultural college. There will not only be grains of all kinds, but on the train will be carried types of the best dairy cow and the best cow. The purpose of this train is not to boost any country or section of the country, Mr. Lamson explained in the course of his talk, but it is simply a collective exhibit of the best products raised in this part of the country, and its purpose is to benefit the farmers and stockraisers and to give them the proper incentive to raise better crops and stock so they may get the maximum of volume from their labor and their products.

On the train will be models of different silos, and sufficient silage with which to make proper demonstrations. It is probable also that a Home Economics coach will be run for the benefit of the women folk.

The list of speakers is comprised of the leading agricultural men of the west and middle west. A great lot of descriptive literature will be carried, and there will be many charts to illustrate the points. This train will be one of the most complete in every detail that has ever made a trip in the interests of agriculture, and will be an education in itself.

The purpose and plan were ably outlined by Mr. Lamson Wednesday noon, and he presented samples of the numerous booklets which will be distributed on each day. The list of speakers was named, and in it there were many names familiar to Box Butte county people. Mr. Campbell also gave a short talk, telling of several almost phenomenal cases that had resulted from the visit of an agricultural train in Colorado. County Agent Seidell promised his hearty cooperation in the work, and considerable advertising matter will go out from his office.

The complete demonstration will be given Sunday afternoon. This is being done so all farmers can be present. The train will be thrown open to visitors, and each department will be presided over by a competent demonstrator who will explain the work thoroughly to all who attend. The train will be taken up by the farmers who will give some good, sound, interesting agricultural talks

regarding all departments of farming, stockraising and dairying. It is probable that in the evening they will go to the opera house or picture show where talks will be made and illustrated with slides.

Realizing that the children are the coming farmers, the demonstrators will pay special attention to them, and Monday morning from 8 to 10, special talks will be made at the different schools. The train will be left open all day Sunday for the benefit of those who will not be able to attend the demonstration. In the afternoon, and the school children are invited to inspect the exhibits at any time during that day.

W. E. Spencer is chairman of the committee, and is now busy preparing the program and advertising matter. The full program for the stop will be announced next week. In the meantime, every farmer, and others, as well, should arrange to be here Sunday afternoon.

**How's This**  
We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. Cheney & Co., Toledo, O. We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by his firm.

National Bank of Commerce, Toledo, O. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c per bottle. Sold by all druggists. Take Hall's Family Pills for constipation.

Mr. and Mrs. Harry DuBuque returned last Saturday from an extended automobile trip over Colorado, Nebraska and South Dakota. Harry says the trip would have been a very enjoyable one had it not been for the terrible condition of the roads, but he said he had to "fight mud" all over South Dakota and in part of Nebraska. The appearance of the automobile bore out his statement very forcibly.

## "TIZ" GLADDENS SORE, TIRED FEET

"TIZ" makes sore, burning, tired feet fairly dance with delight. Away go the aches and pains, the corns, callouses, blisters and bunions.

"TIZ" draws out the acids and poisons that puff up your feet. No matter how hard you work, how long you dance, how far you walk, or how long you remain on your feet, "TIZ" brings a restful foot comfort. "TIZ" is wonderful for tired, aching, swollen, smarting feet. Your feet just tingle for joy; shoes never hurt or seem tight.

Get a 25 cent box of "TIZ" now from any druggist or department store. End foot torture forever—wear smaller shoes, keep your feet fresh, sweet and happy.
