The Man Who Walks By You -

When a man walks by you on the way home to-night with a light, youthful step—don't envy him. Just make up your mind to come down here tomorrow and get the same shoes he wears—the famous Dr. A. Reed Cushion Shoes. Then, you can skip along yourself like a twelve year old.

Reed shoes are the easiest shoes on earth. Nothing else like them—if you have to walk much. No tired, aching feet, then. For the soft cushion insulates support the arches of your feet, distribute your weight evenly—and make walking a delight.

We'd just like to have you try on one pair and see how comfortably they fit the first time. That's convincing enough for everybody. And if you're "finicky" on style or leather—we've a wide variety of both to show you. Come in tomorrow.

Public Sale!

Having bought a small place in the hills, I have decided to sell at public auction on the Britton & Parker ranch, 13 miles north and 1½ miles east of Alliance, at 10 o'clock a. m.

Thursday, October 21

MACHINERY

- 1 Grain Binder
- 1 Corn Binder
- 2 two-row Lister Cultivators
- 1 Double Cultivator
- 2 Listers
- 1 Potato Digger
- 1 Gang Plow
- 1 Potato Planter
- 1 18-foot Harrow
- 1 Roller

32 HEAD OF CATTLE

- 30 Head of Bull Calves—High Grade Herefords
- 1 Registered 2-year-old Bull
- 1 Grade 2-year-old Bull

25 HEAD OF HORSES

I will place on sale twenty-five head of horses, consisting of the following:

- 2 3-year-olds
- 2 2-year-old Black Geldings
- 2 2-year-old Bay Geldings
- 2 2-year-old Sorrel Geldings
- 2 2-year-old Brown Mares
- 1 2-year-old Bay Mare
- 1 2-year-old Sorrel Mare
- 1 9-year-old Sorrel Mare with Colt
- 1 7-year-old Mare with Colt
- 10 yearling Colts (Mares and Geldings)
- 1 10-year-old Clydesdale Imported Stallion, wt. 1,800 lbs.

PIGS

- 1 Duroc Jersey Boar Pig

WATERING MILK FOR SWINE

Skim milk alone is poor food and often results in digestive troubles—Alfalfa is best.

It would make anybody pretty hot to know that the milk he is buying is watered. Nevertheless, the addition of water to milk fed to the hogs is often advisable. Where milk is fed exclusively, or in large amounts, as is customary in most dairies, digestive troubles often result among the swine. Milk as an exclusive diet is a harmful, wasteful and unwise proposition, but even when some other things are given with the addition of about one-third water is usually beneficial.

Several of the best hog men add this amount of water and let the milk stand in a barrel in as cool a place as possible during warm weather until the mixture begins to sour and then feed it. The advantage comes partly in diluting the feed so that when a hog has a stomachful there will not be the amount of food in it that there would be if pure skim milk were given. It also gives the weaker pigs a better chance at the food.

It is a good plan to have some corrective, like charcoal, wood ashes, etc., mixtures often recommended, before the hogs all the time, but this is especially necessary when much milk is given.

As a matter of fact, skim milk alone is a poor business. Hogs are in demand, and a dairyman could raise twice as many, and better ones, too, if he fed some alfalfa with the milk, and each pig would cost him less when ready for the packer.

Alfalfa is best for hogs cut when about two-thirds as far along as that cut for cows. It is more tender and digestible, and as it is cut three times for hogs to twice for cows, as much can be secured per acre. The alfalfa should be cured, but not dead dry. A very tasty food is made by putting about four pounds of salt with each ton of this, and the hogs will go to it quicker than they will to green alfalfa. On a 20-cow dairy about twice the hogs can be turned off per year by such feeding of one acre of alfalfa, as would be turned off if only skim milk were fed, which is good business.

MULE MOST VALUABLE ASSET

Animals Are Easy to Raise and No Better Way of Making Money Than by Breeding Them.

Down South I used to hear them say "two sets of mules will last a farmer a whole lifetime." Southern farmers recognize the value of the mule as a farm animal and would rather have a team of mules than a team of horses.

Mules are easy to raise, and I don't know of an easier way of making money than in raising and selling them, says a Missouri writer in the Farm Progress. Any kind of a mule team that is fairly sound is marketable right now and as a rule the price goes up along toward planting time in the spring.

I sometimes break a team of mules to work when they are two years and six months old. They sell well from that time on till they are from eight to ten years old. Sucking mules are always eagerly sought by buyers and feeders and it is a fact that a mule is about the easiest thing about the

Span of Farm Mules.

farm to sell. They grow up to working size quickly and the farmer hardly notices the feed it takes to raise them.

I have found that a mule is a good animal as long as he keeps his teeth. When advanced age helps to destroy their teeth, their usefulness is pretty well at an end, but they will outlast most horses. The mule that weighs a scant 1,000 pounds will do fully as much work, live on far less rations and last years longer at hard work than a good 1,200-pound horse.

Silage.

The Englishman raises roots and beats us at producing mutton. We can't raise roots profitably. But we have fed enough silage to know that it can be fed safely and with profit. We have learned that it should be perfectly cured and that it should be made from corn that is well matured. No other farm animal makes better use of succulence than the sheep. Try silage for the sheep, feeding with caution at first if it has never been used before.

BOYS ARE IN COUNTY JAIL

Broke into Newberry's Ware House and Took Cartridges to the Amount of \$42

CAUGHT DISPOSING OF SHELLS

George Manewal and Wm. Dunbar, two Alliance young men about 17 years old, are in the county jail charged with breaking into the Newberry Hardware Company's ware house near the Burlington tracks Monday night and removing three cases of cartridges, the amount of which was \$42. The boys were apprehended when they sold some of the shells, and their arrest followed. They were immediately lodged in the county jail, and their preliminary hearing will be held before County Judge Berry tomorrow morning at 9 o'clock. It is probable that they will plead guilty at that time and throw themselves on the leniency of the court. As the amount of the theft makes it grand larceny, and with the breaking into the store room as a separate offense, the case looks anything but hopeful for these young men.

A GIANT LABORATORY

New Edison Factory Is a Wonderful Place—Edison Week to Be Celebrated Here Next Week

October 21 will be celebrated by the Edison electric dealers as Edison Day. All of next week will be celebrated by the phonograph jobbers and dealers of the United States and Canada as Edison Week. Geo. D. Darling, proprietor of the Edison Shop in Alliance, has arranged for a number of demonstrations of Edison's new invention and also entered an Edison diamond disc phonograph window display in the International Window Display contest which is being conducted by the Edison Jobbers' Association.

Thomas A. Edison's extensive knowledge of chemistry has always been one of his greatest resources. Five years ago when he set himself to the task of producing an instrument that would re-create sound so perfectly that the re-creation could not be detected from the original, he invoked chemistry in the final perfection of his new invention. To be sure, his vast knowledge of acoustics played an important part in the work but the marvelous perfection of result was due largely to the chemistry that produced the materials used in the Diamond Disc record and the diaphragm of the Diamond Reproducer.

Strangely enough, the big fire that devastated his Grange factory in December last proved an aid. In rebuilding and reconstructing, Edison turned his phonograph record plant into a vast laboratory and has so standardized and perfected laboratory processes that he is now producing the Edison Diamond Disc in unlimited quantities. The significance of this has not been lost upon the merchants who sell this new product, and they refer to these new records as the Laboratory Re-creation of music.

At San Francisco on October 21, Miss Christine Miller, the celebrated contralto, will appear before the ex-

position officials and invited guests for the purpose of demonstrating whether the new Edison re-creation of music is equal to the original. She will sing in comparison with several Edison records of her own voice.

Will Attend Macabee Rally

Eleven Alliance ladies, members of the Lady Macabee order, went to Hyannis today to attend the rally of that order, which is being held today and Friday. A large class will be initiated this evening. Those who made up the party from here are Mesdames Ben Mullane, F. E. Allen, W. J. Hamilton, R. E. Driscoll, T. Warner, Clyde Miller, Feter Young, J. M. Schirk, F. W. Hargarten, J. W. Reed, and Mrs. L. J. Sisco, of Ellsworth.

Believes in Printer's Ink

The Golden Rule store is represented in this issue of the Herald with a fine half-page ad, setting forth many reasonable bargains. Mr. Barnett, the manager, believes there is nothing like printer's ink for getting the business.

BROTHS TO START A MEAL

Preparations Are Valuable Chiefly for the Stimulating Effect They Have

Broths are not particularly valuable from a nutritive standpoint, but they have a decided stimulating effect. In this way the extractives from the meat, contained in the broth, stimulate the gastric juice in the stomach and prepare it for the food which follows.

On the contrary the cheaper, inferior parts of meat yield more nutriment. The chief object in making broth is, of course, to obtain the largest possible amount of nutriment, and this is best accomplished by observing the following rules:

Cut meat in small pieces. Soak it in cold water before heating. Make a careful selection and proportion of meat, bone and water. Usually one pint of water to one pound of meat. Judicious seasoning. Long, slow cooking. Simmer (not boil) in a steam-tight kettle. Make the day before using, so that fat may be removed more easily.

Various nourishments may be added to broth—rice, barley, vermicelli, noodles and the white or whole of eggs, etc. Cream soups have a greater food value.

Just one caution—when I advise broth before meats I mean not a soup plateful, but a small cupful to start the gastric juices.—Kansas City Star.

Prevents Lumpiness.

Possibly those who have kept house for a long time know, but there are many others who have difficulty in making custards, cornstarch puddings and gravies smooth if there are eggs in them.

A simple way is to remove the milk, sugar and other ingredients, supposing it is cornstarch pudding one is making, from the stove to cool enough to stop the boiling.

Dip a few spoonfuls of the hot milk into the bowl in which there are the well beaten eggs, stirring as each spoonful is added.

This heats them gradually, not allowing them to cook before they are thoroughly mixed with the milk.

Then they may be added to the larger quantity on the stove, stirred in quickly and the pudding placed over the fire to finish cooking.

Fall and Winter
