

NEBRASKA WORKERS READY FOR CAMPAIGN

Organization Is Full of "Pop" and Eager to Put State Over the Top in Victory Loan

Nebraska has decided to put its Victory Liberty Loan over the top.

Those who are familiar with Nebraska's war work record will realize from this that Nebraska will succeed. There existed a few weeks ago, even in the organization, a little doubt as to whether Nebraska would respond to the "post-war" call as well as it had done during the war. But when the district chairmen and the county chairmen reflected that it is really not a "post-war" call until the war is over, and that the war isn't over until it is paid for, that made it look different, and Nebraska will put her share of the Victory Loan over.

At a meeting of state, district and county chairmen held in Omaha, Tuesday, March 11, reports from these chairmen made it apparent that the attitude of the public is rapidly recovering from the setback it suffered just after the signing of the armistice. At that time the reaction was apparent all over the country and people had little time for anything but business. To them the war was over. But with the coming home of the boys from France has arisen the old patriotism that made the nation respond to the calls of the Government. This same patriotism is going to see to it that the peace which we fought for and which we won is going to be paid for, say the Nebraskans—and Nebraska is only typical of the United States.

State Chairman T. C. Byrne of Omaha says the Tenth District can count on Nebraska and his county and district chairmen to back him up in the assertion.

The Nebraska chairmen listened to an interesting account of the war from Dr. C. E. Henry, of Omaha, who was in command of a hospital unit in France and who has just returned to his practice. Doctor Henry has a son still in the balloon service.

John H. Glazier of Kansas City, one of several speakers who will tour the district in the interests of the Victory Liberty Loan, made a splendid address Tuesday afternoon at the Omaha Chamber of Commerce.

NEBRASKA WOMEN PLAN FOR VICTORY LOAN WORK

Co-operation and intensive organization were the key notes of the meeting of district and county chairmen of Nebraska, who met in Omaha, March 5 and 6. One hundred women responded to the call of the state president, Mrs. A. G. Peterson, to meet and form plans for the Victory Loan campaign.

At the time of calling the conference, Mrs. Peterson had all but two counties of her state organized and intact, and all the chairmen were present.

Mrs. George W. Fuller, of Kansas City, director of Woman's Section Tenth Federal Reserve District, attended the conference, lending much inspiration and giving expert advice on many problems. She emphasized the importance of service and convinced all workers that the Victory Loan is essential.

While realizing fully the difficulties to be encountered in raising the Victory Loan, there was an atmosphere

of optimism, sincerity and determination on the part of the workers, which will put Nebraska over the top. Much stress is to be laid on the educational campaign and on publicity, as well as personal work, in the coming campaign.

GERMAN CANNON MELTED INTO VICTORY MEDALS

Official announcement is made by the United States Marine Corps Recruiting Headquarters, Ninth and Main streets, Kansas City, Mo., that German cannon captured by the doughboys and leathernecks at Chateau Thierry are being melted up by the United States Treasury Department and made into medals to be awarded workers in the forthcoming Victory Loan campaign. Every city, town and hamlet in the country will receive its quota of these souvenir medals, which will have a replica of the United States Treasury building on one side, and appropriate inscription on the other, with space for the holder's name to be engraved thereon.

The second division, United States Army, which captured these cannon, was composed of regular army regiments, and United States Marines. The division is commanded by General John A. Le Jeune of the United States Marine Corps. The division lost 24,385 officers and men wounded

or killed. This is ten per cent of the total casualties of the entire American Expeditionary Force. The second division captured 12,026 prisoners, or one-fourth of the total of the A. E. F., and 343 cannon, one-quarter of the total cannon captured by the A. E. F.

POTATO SPECIALIST HERE APRIL 14TH AND 15TH

H. O. Werner of the University of Nebraska and one of the best posted men in the state on potato improvement work, will spend two days in Box Butte county, April 14 and 15, in the interest of the potato industry of this county.

Mr. Werner was formerly with the North Dakota Agricultural College where he spent the greater part of his time doing experimental work in the potato fields of that state, and because of his knowledge and experience along this line he has been secured by the University of Nebraska to carry on similar work among the potato growers of western Nebraska.

Mr. Werner carries with him some sixty slides with which he will illustrate the various lines of his work. Among the more important subjects that he will discuss while in the county are: Selecting better seed potatoes; improving the quality of Nebraska potatoes; potato diseases and how to control them; the value of Nebraska potatoes for seed stock and

the demand for high grade seed stock.

Two meetings will be held in the county, one in the court house at Alliance, at 8 p. m., April 14, and another in Schindler's hall at Hemingford, at 8 p. m., April 15. Every potato grower in Box Butte county should plan to attend one of these meetings.

GEORGE NEUSWANGER,
County Agricultural Agent.

The Cushman Light Weight Gas Engine is an all-purpose engine and is especially adapted to farm use. We will be glad to show you what it will do. Several of them are now in use in this section of the county and all are giving good satisfaction.—The Dierks Lumber Company. 78651f

Farmers and Land Owners!

The "FORDSON" TRACTOR is the result of extensive trials and experiments conducted by Mr. Henry Ford, covering a period of many years. Before placing the tractor on the market, every detail has been thoroughly tried out under actual farming conditions in various parts of this country and abroad.

Experience has pointed to the small, light tractor as being the one machine which will fill all varying conditions satisfactorily.

In developing the "FORDSON" Tractor, the aim has been to produce a small tractor which will be low in first cost, reliable, and above all—efficient.

Being small, light and economical, the "FORDSON" Tractor is adapted for use on small farms as well as on the largest. It will pull all farm implements and do the work generally done by horses on the farm. In addition, by its belt pulley the tractor will drive farm machinery such as a thresher, ensilage cutter, etc., making the "FORDSON" a truly universal tractor.

In design and construction the "FORDSON" takes a long step in approaching the ideal tractor. The simplicity of its operation and construction will at once appeal to the farmer.

Special devices were perfected to keep out dust and dirt. All moving parts are enclosed and thoroughly lubricated. The number of lubricating points requiring attention are very few and easily gotten at.

The motor, transmission and rear axle are assembled together, forming one rigid unit, which, combined with the three-point suspension, relieves these parts of all strain.

The absence of any frame gives accessibility to all parts for making adjustments or repairs, and allows the tractor to be taken apart in a few minutes.

The motor is of substantial design and is capable of delivering its full power continuously. It embodies features which have been used with success in other fields for many years.

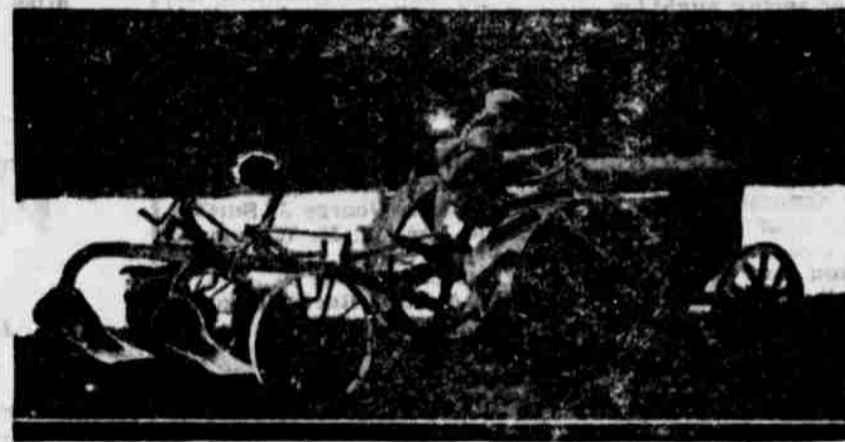

PERFORMANCE

The tractor is designed as a two-plow machine and will pull two 14-inch plows in the stiffest soil. It will maintain a drawbar pull of 1800 pounds at plowing speed. In low gear a drawbar pull of 2500 pounds is obtained.

The fuel consumption varies with conditions; two and one-half gallons of kerosene per acre being a fair average. The amount of ground plowed also depends on conditions; eight acres in ten hours would strike an average.

When used at stationary work and running at full power, at 1000 R. P. M., the fuel consumption does not exceed two and three-fourths gallons per hour.

The total weight of tractor is 2700 pounds, with water and fuel tanks filled. * Overall length is 102 inches, height 55 inches and width 62 inches.

There won't be enough Fordson Tractors to go 'round!

THE demand for the Fordson tractor is so great that it will be a long time probably before everyone will be able to get one. Therefore, if you are looking for a tractor and wish a Fordson you should see us at once.

The Fordson has more than fulfilled expectations. With its economy—efficiency—durability—it is ideal for the average farm.

Burns kerosene—has special air washer—and all moving parts are enclosed—there is practically nothing to cause trouble.

Use it with the Oliver No. 7 Plow

Here are some of the big Oliver features: The combined rolling coulter and jointer buries all stalks, weeds and trash at the bottom of the furrow; and the stop device maintains an even depth of furrow. The best plow for your Fordson—that's the Oliver.

Come in and let us show them to you.

Conditions Still Abnormal in the Telephone Business

During the war we were affected by the unusual prices and often by the scarcity of the goods we needed.

As we all know, in the year and a half the war lasted, prices rose rapidly and are still very high.

And while prices kept going up, because of war conditions it became more and more difficult to obtain materials and capable employees.

The telephone companies, like most other industries, were hit hard by increased expenses and by the scarcity of labor and equipment.

And things are not yet back on a normal basis and probably will not be for some time.

While we hope it will not be long before our former employees are out of the army and on the job again; and we expect soon to be able to get promptly all the equipment we need—

Still, the high price of materials and the generally high operating expenses are problems that we shall no doubt have to meet for several years.
