MRS. GOLDE NOT IMPRESSED Agent's Talk of the Efficiency of "Touch" Merely Amused Old

Man's Darling. Laurence A. Tanzer of the Citizens'

union, was condemning in Albany certain features of the proposed New York charter. "I don't want to see the city in the

power of the bosses," he said. "1 don't want to see the city placed in the position of old Gobsa Golde.

"Gobse Golde, you know, married in his old age a beautiful young actressa very regrettable thing.

"The fair young Mrs. Gobsa Golde was examining the royal suite in a 30story hotel of cream-colored stone one day, and the hotel manager was pointing out the suite's manifold conveni-

''You touch a button,' he said, 'and this onxy bath fills automatically. You touch a button, and the temperature of each room rises or falls. You touch a button, and a motor car is at the door. You touch a button-

"But Mrs. Gobsa Golde, nodding mischievously toward her aged husband, said:

'Oh, I have no use for your silly tittle buttons. I only need to touch my husband, and diamond necklaces, yachts, ropes of pearls--anything I want-appear."

#### Explained.

An old lady, the customer of an Irish farmer, was rather dissatisfied with the watery appearance of her morning's cream and finally she complained very bitterly to him.

"Be alsy, mum," said Pat. "You see, the weather of late has been so terrific hot that it has scorched all the grass off the pasture land, and Oi have been compelled to feed the pore bastes on water lilles!"-Ideas.

#### Doubtless.

"She left me for some motive or another."

"Probably another." - Lippincott's Magazine.

The moment a man begins to love his enemies he has the devil's hate.

A BRAIN WORKER. Must Have the Kind of Food That Nourishes Brain.

"I am a literary man whose nervous energy is a great part of my stock in trade, and ordinarily I have little patience with breakfast foods and the extravagant claims made of them. But I cannot withhold my acknowledgment of the debt that I owe to Grate-Nuts food.

"I discovered long ago that the very bulkiness of the ordinary diet was not calculated to give one a clear head, the power of sustained, accurate thinking. I always felt heavy and sluggish in mind as well as body after eating the ordinary meal, which diverted the blood from the brain to the digestive apparatus.

"I tried foods easy of digestion, but found them usually deficient in nutriment. I experimented with many breakfast foods and they, too, proved unsatisfactory, till I reached Grape-Nuts. And then the problem was solved.

"Grape-Nuts agreed with me per fectly from the beginning, satisfying my hunger and supplying the nutriment that so many other prepared foods lack.

"I had not been using it very long before I found that I was turning out an unusual quantity and quality of work. Continued use has demonstrate ed to my entire satisfaction that Grape-Nuts food contains the elements needed by the brain and nervous system of the hard working public writer." Name given by Postum Co., Battle Creek, Mich.

"There's a reason," and it is explained in the little book, "The Road to Wellville," in pkgs.

#### TALK ON CAPILLARITY

Moisture Steadily Transferred From One Particle to Another.

When Surface of Soil Is Left Undis turked Tubes Come Close Together, Allowing Water to Pasa From One to Another.

Now capillarity is a big word, and t means something pertaining to a halr. Now halr has very little to do with the soil and yet "capillarity of the soil" is a common term. Very fine tubes are called capillary, or hair like tubes, and the word capillary is often applied wrongly because we tertisement will be have no better word to express the accepted from each cutmeaning. For instance, take two tomer as 10 coupens. sheets of glass and place them in a an of water, and the water will flow up between them far above the 'eve! in the pan, and if the glass is not too long, it will run over the top, ary attraction. Place a piece of woolon rag in a pan of water and leave JUST MAKING OUT A CASE Why Rent a Farm water will run up the cloth and over Uncle Jeth Had Deep Reason for Ocbe rim of the pan. This, too, is called apillary attraction, yet in neither are are their any hairs or hair like Now, in the soil we often peak of the less of moisture by capilarity or capillary attraction, and of capillary tubes through which the waubes and no continuous passage beween the lower moisture in the soil so invariably that it seems to me the and the surface. But there is a constant flow of water through the soil, and this moisture is being steadily transformed from one particle to another. Now when the surface of the soil is left undisturbed these particles come very close together, and the closer they lie together the more easily the water passes from one to the other. So if grunted. the ground is left it compacts, that is, the soil particles come closer together; this forms a very close connection between the surface and the lower layers, and between these closely compacted particles there are minute spaces through which the water raises with comparative rapidity, this comes to the surface and is evaporated by the sun, so that it is lost to the soll and we say the ground is dry. In speaking of this process it is often said that the moisture escapes through capillary tubes, although as you see, there are no tubes at all, only a close connection between the minute soil particles, which is just as bad, for it affords a

To prevent the escape of this moisture too rapidly, some people apply what is known as a mulch to the soil, or to such parts as they wish to protect. This is some kind of covering, straw or other, which will shade the ground and prevent the evaporation of the water by the sun. This, of course, does not prevent the moisture to the surface. To cheek this loss and prevent too much of the water from escaping, we resort to what is called "cultivation." That is we keep the surface always broken up; keep stirring the top soil, so that the connection between the soil particles is broken up and prevented from being continuous. This forms what is called a dust mulch, or a dust covering, and if this is kept from compacting, it prevents the formation of continuous passages for the water which is kept in the soil, until it flows past the trees and plants whose roots take it up and use it for building up their tissues and making fruit and grain. It does not take long for the particles to settle close together again, so that they require frequent stirring up. You will under stand from this the philosophy of cultivation, or the frequent stirring of the soil, and why it is necessary.

continuous passage for the water to

come up to the surface and be lost.

#### DURUM OR MACARONI WHEAT

In Dry Northwest It Has Met With Considerable Favor-It Resists Drought Splendidly.

Durum wheat is generally grown as a spring wheat. In the dry northwest it has met with considerable favor. It generally out-yields spring wheat and resists drougth splendidly. The great est objection to growing macaroni wheat in this country has been the lack of market, the millers at first discriminating against it. Analyses indicate that Durum wheat has a high value for feeding purposes, being conf siderably richer in protein than or dinary wheat, says the Wallaces Farmer. It is so hard, though, that is must be ground before being fed. W6 have reason to suspect that a larger amount of feeding nutrients can be obtained from an acre of Durum wheat in a dry season than from any other spring grain unless it be bariey of

Durum wheat does not stool quite as much as ordinary spring wheat and consequently should be sown a little thicker. A bushel and a haif to two bushels to the acre is about right,

Clean Milk Pails.

When pails are left around with milk clinging to them the bacteria grow and multiply at a tremendous rate.

In order to have wooden utensiis endure service better and keep pure longer, wash them in cold water be fore they are scalded.
