It is a large brick structure and is most beautifully situated for an institution of this character.

Crop Conditions.
The past week has been cold with excess of cloudiness, but with less than normal rain fall. The daily mean temperature has averaged 4 degrees below normal.

The rainfall at a few places in central and southern counties exceeding an inch, but generally it was less than half an inch.
The first days of the week were cloudy, with light rain; these were followed by partly cloudy, then by clear days the last part of the week. Conditions have materially improved with the light rainfall, but the low lands continue too wet for the best growth of small grain, as well as for planting or cultivating corn. Small grain, generally shows the effects of continued wet weather; the growth has been very rank, and rust is beginning to appear on the winter wheat in a number of places in the eastern counties. However, as a whole, wheat, oats, and rye continue in a very promising condition. The wet condition of the soil has retarded corn planting, but some progress was made generally on the uplands on and after Friday, also the cultivation of early planted corn. The corn fields are very weedy and corn that is up is generally yellow and unhealthy in color; early planted corn has germinated well, but grown slowly. Considerable corn ground in southeastern counties is still unplanted; in northern and western counties planting is about complete. Strawberries are ripening and generally promise a good crop. The outlook is for an unusually good crop.
