They found the water rather too deep for comfort in town but as they got out toward the higher ground they found that the heaviest of the rain was only local as while it rained in the country and at Murray it was light compared with that in town.

A delicious and much enjoyed luncheon featured the day.

TIRES MAY LOOK ALIKE ON THE OUTSIDE ON THE INSIDE THEY ARE DIFFERENT

HEAT on the inside created by friction is the main cause of blowouts. Firestone Tires are different on the inside—they are built with the patented extra process of Gum-Dipping that soaks every cord and insulates every strand with pure liquid rubber, preventing internal friction and heat. No other make of tire is Gum-Dipped.

When you realize that there were 382,000 automobile accidents in 1934, injuring 954,000 people and killing 36,000, and that 43,000 of these accidents were caused by blowouts, punctures and skidding, you will be more interested in the make of tires you use on your car.

Firestone performance records again emphasize the undisputed evidence that Firestone Tires are not only blowout-proof, but give greatest protection against skidding. There are three questions and answers that will solve the problem of what tires to buy:

QUESTION 1—"Will the tread give me the greatest traction and protection against skidding?"

ANSWER—Recent tests by a leading University show that Firestone High Speed Non-Skid Tires stop a car 15% quicker than any other of the leading makes. For eight consecutive years Firestone Tires have been on the winning car in the dangerous Pike's Peak Race where a skid means death. This is undisputed evidence that Firestone gives car owners greatest protection against skidding.

QUESTION 2—"Are they blowout-proof?"

ANSWER—Firestone Gum-Dipped Tires have the most amazing records for being blowout-proof of any tires ever built. In the grueling 500-Mile Race at Indianapolis, May 30th, every one of the 33 cars was equipped with Firestone Gum-Dipped Tires. Kelly Perillo won the race and broke the record over this 26-year-old rough brick track without tire trouble—in fact, not one of the 33 drivers had tire trouble of any kind.

Ab Jenkins drove his 5,000 pound car on Firestone Gum-Dipped Tires over the hot salt beds of Utah, 3,000 miles in 23½ hours, at an average speed of 127.2 miles per hour, with temperatures as high as 120°, without tire trouble of any kind. These are most amazing proofs of blowout protection ever known.

QUESTION 3—"Without sacrificing these two important safety features will they give me longer mileage, thus making them the most economical tires I can buy?"

ANSWER—Firestone High Speed Tires not only give you more than 50% longer wear, but also lowest cost per mile. This is made possible by the tough, wear-resisting tread built with higher shoulders and a wider, flatter contour. This thick, rugged, scientifically designed tread is held securely to the Gum-Dipped cord body by Firestone's patented construction of two extra layers of cords under the tread. This is a special construction feature not used in any other tire. Unequaled mileage records by thousands of car owners add undisputed evidence of the longer wear and greater economy of Firestone High Speed Tires.

You Always Get Better Quality at No Higher Price when You Buy a Firestone Tire with the Firestone Name and Guarantee

1 University tests show Firestone tires stop cars 15 to 25% quicker.

2 Gum-Dipped cords give greater blowout protection. Gum-Dipping is not used in other tires.

3 Wider, flatter tread gives more than 50% longer non-skid wear.

Her Secret Romance Revealed

Harriet Sebastian

Her romance with a West Point cadet four years ago ended in the divorce courts when Harriet Sebastian, former Vanities dancer, brought suit for separation against Lieut. Henry A. Sebastian, former Army football star. The action resulted in court-martial of Sebastian, who was charged with making false statements to conceal his marriage in 1931 while still at West Point where it is a military rule that cadets cannot have wives.
