best of the larger fall bulbs. This means that it establishes itself as a permanent occupant of the border and comes each spring without being lifted and coddled.

The narcissi are classified by clans, in which the relationship is the same as in human clans. The Barri were developed from certain parents; they have a common ancestry and their name comes from the fancier who started the line, Peter Barr. The Leedsl, Poetaz and Incomparabilis classes are similar clans.

The Poetieus and Leedsi types are perhaps the most successfully naturalized. Under favorable conditions they will multiply if left undisturbed for several years. It is the best practice not to move narcissus bulbs of any type every year. Even in growing for commerce many growers leave the bulbs in the ground two years without lifting. But when they become crowded they should be lifted and given more room.

Narcissus Is Favorite Indoor Bloom

#### Paper-White Narcissus.

The season of gardening for flat dwellers is at hand. Paper-white narcissi, Chinese lilics, hyacinths and daffodils, which are easily brought into flower indoors, are all obtainable. During the winter, flowers may be grown from bulbs with little trouble

Paper-white narcissi will come to flower in six weeks if the bulbs are placed in a shallow bowl with gravel to hold them upright and the bowl is kept full of water. Hyacinths will flower if placed in glasses full of water so modeled that a shoulder holds the bulb at top of the glass, while ample space is left below for roots to develop.
