

The Science of Money; Or The Principles deducible from its History, ancient and modern; By Alex. Del Mar; Third edition; 8vo. pp. 226; cloth, \$1.

"The Science of Money," by Alexander Del Mar, M. E. formerly Director of the Bureau of Statistics of the United States, Mining Commissioner to the United States Monetary Commission of 1876 and author of several books concerning the precious metals, published in large type and handsome dress by the Cambridge Press of New York, is a contribution to this large and intricate subject that demands the closest study. It is written in a style of powerful simplicity and the originality of many of the observations it contains on modern society as affected by monetary mechanisms are of profound interest and convincing value. Taken altogether Mr. Del Mar's book is one that no publicist and no thinker can afford to be without. It pays a large premium on perusal.—NEW YORK PRESS.

MR. WEBSTER DAVIS' BOOK.

This work is the outcome of a visit to the Transvaal, made by Mr. Webster Davis while he was Assistant Secretary of the Interior, under Mr. McKinley's first administration, and as a result of which he broke his relations with the Republican party and affiliated himself with the opposition. The author vehemently arraigns the British government for the Transvaal war. Whether the reader agrees with the author or not, he will be interested in his presentation of the

Boer side of the case. Milton said that truth could not suffer so long as she was left free to combat error. The illustrations were all taken on the spot, either by Mr. Davis or by some of his friends, and they certainly form a unique collection of South African pictures. Cloth, large octavo (6x9), 400 pages altogether, printed on coated paper, beautifully illustrated by over eighty full-page half-tones, attractively bound. Two dollars, carriage prepaid.
