Of these Mills we manufacture five sizes for corn.

and three expressly for grinding wheat flour. The peculiar novelty of this Mill is, the under stone is the running stone, in all cases. There is no limit to the speed, and as speed is overything in grinding, it will out grind any upper grinder in the world. Secondly; By this arrangement we are enabled to get grain into the Mill with a very small eye, consemently we grind nearer the centre, and of course with less power than any upper runner can be made. Thirdly: Our Mill takes any kind of grain without trouble in all Mills where the upper stone is the run-ner. Of course, we mean small Mills, where the motion must be high to do much busines Fourthly: Our Mills never take unjury by running empty—the under stone not touching the upper one,
