

### Boy Drowned in Attempt to Save Life of Brother, 6

#### 9-Year-Old Lad Tightens Lips and Plunges Into Water in Attempt to Save Child.

Chicago, Oct. 4.—Under the black waters of a deep quarry at Bolton today was the body of little John Kozmin, 6. On a cold slab in the village morgue lay the body of his 9-year-old brother, Joe.

The boys at Bolton regarded the quarry pit as "bottomless" but Young John was a fearless swimmer. Against the admission of Joe and his other pals, John cringed and dived. Only a few bubbles came up. "Go! I'm scared to go in there," said Joe. His lips tight, he hesitated but an instant as he balanced on the edge of the steep quarry wall and plunged in after his brother.

Rescuers found Joe's body an hour later.

#### An Old Fashioned Boy.

Chicago, Oct. 4.—Walter Tetz, 17, was an old fashioned boy who cared for no companionship except that of his mother and his dog. Walter's mother died last Christmas Eve and he bore his sorrow until last night. Then he carefully locked his dog outside the kitchen and turned on the gas. Physicians said he might recover.

#### Two Poisoned By Corn.

Miles City, Mont., Oct. 4.—Two real devils of the "Cabin Creek" district, north of Baker, Mont., are dead from poisoning believed to have resulted from eating preserved corn.

The dead are Miss Pearl Walden, 20, a school teacher, and Adolph Nitschka, 22, a rancher.

### L. D. S. Membership Passes 100,000 Mark

Independence, Mo., Oct. 4.—(Special)—The report of the department of statistics to the general conference of the Reorganized Church of Jesus Christ of Latter Day Saints, in session here, show the baptism of nearly 1,100 converts since the last conference early in 1920. The total membership of the church is 100,000, which covers 2,000 in Australia, an equal number in the British Isles, and a slighter distribution over other foreign missions.

The business of the conference today was at a standstill because the quorums to whom had been submitted yesterday the "revelation" received by the president of the church, are still debating the document in their private sessions, and are not ready to have it come before the body for endorsement. Before any revelation becomes a law unto the church, it must be approved by the various quorums of ministers, and then by the delegate body in conference assembled.

### Body of Slain Minister Will Be Exhumed Today

New Brunswick, N. J., Oct. 4.—County Prosecutor Stricker was informed late yesterday that an order directing trustees of Greenwood cemetery, Kings county, New York, to allow exhumation of the body of Rev. Edward Wheeler Hall, who with his choir leader, Mrs. Eleanor R. Mills, was murdered September 16, had been signed by Supreme Court Justice O'Malley, in Manhattan.

### Sale of Katy Postponed.

St. Louis, Mo., Oct. 4.—The sale of the Missouri, Kansas & Texas railroad has been postponed, according to unofficial reports of railroad officials both at Dallas and Denison last night. The official announcement of the postponement cannot be made until tomorrow, they said.

### "Lone Rider" Lets Mayor Mount Brown Beauty, 'Pet'

Van Cleef Gulick, "the lone rider," started out from his home at Bensonport, Ia., May 23, 1921, astride his 11-year-old brown mare, "Pet," determined to visit every state capitol in the United States.

He entered into Omaha Monday evening, and Tuesday afternoon rode up for an official visit with Mayor Dahlman.

Now, Gulick is a true horseman and doesn't relish allowing "strangers" the honor of sitting astride his brown beauty, "Pet."

But "Our Jim," the "cowboy mayor," started talking "horse" with Gulick and spun a few yarns about the "good old days" on the range, when the mayor himself was no slouch of a rider.

"That put the mayor 'in good' with Gulick, and the 'lone rider' invited him to 'feel out' 'Pet' 'right pronto.'"

The mayor did, and as Gulick doffed his sombrero and "Pet" pricked up her ears, the staff photographer of The Omaha Bee snapped the shutter of his "box" and the result is before your eyes.

Gulick has visited 31 state capitols in his long ride, and "Pet" has taken him over 5,012 miles since they left the old home "way down in Iowa."

Gulick served in the world war with Company F, Seventh U. S. engineers. He received an official letter of congratulations from Mayor Dahlman and expects to trot out for Lincoln this afternoon.

### RADIO Vacuum Tube Sees Rapid Progress

#### Delicate Device Amplifies Feeble Signals and Generates High Frequency.

There has probably been no development in the art of radio which has been of such great importance or which has contributed to such rapid progress as the development of the vacuum tube. This device in various modifications has found a rather wide application.

Some of these applications are—to rectify feeble radio oscillating currents, to amplify very feeble signals, to generate high frequency for radio transmission, and to convert commercial frequency (60-cycle) alternating current to a direct current supply of voltage which may be used in the transmitting equipment or for charging storage batteries.

#### Construction of the Tube.

The vacuum detector tube, as marketed at the present time consists of three elements or electrodes called filament, grid, and plate. These are mounted and sealed in a glass bulb from which the air is exhausted to a relatively low pressure, and are connected by small wires to studs on the base of the bulb which serve as connecting terminals. The filament is a loop of small tungsten wire, each end of which is connected to a base stud. The grid is a rectangular coil of very fine wire close around the filament loop, and is connected by one wire to a base stud. The plate is an oval or

cylindrical form of thin sheet metal spaced uniformly around the grid. Thus the inner element of the group is the filament and the outer element, the plate, and between these is the fine wire grid. A socket is used for mounting the complete vacuum tube in the same manner that a socket is used for an electric light bulb. The vacuum tube socket has four binding posts for connections which are usually designated "plus" and "minus" for the filament, "G" for the grid, and "P" for the plate. The flow of current from the B bat-

tery to the vacuum tube is the operation of the vacuum tube is that the grid potential, or charge with respect to filament, will control the flow of electrons through the telephone receivers and to the plate, and that a feeble change of grid charge will produce an appreciable change of current in the plate circuit.

It is analogous to a rife where the trigger corresponds to the grid and the explosives in the cartridge to the B battery. A slight amount of energy on the trigger controls a large amount of energy stored in the explosive.

#### Sparks

Oakland, Cal.—The Oakland Tribune's radio station K.L.X. was credited today by the Oakland police with bringing about the arrest in

Los Angeles, of Clifford Heaton, and M. Dyke on a charge of stealing the automobile of C. H. Hoyt. Both Heaton and Dyke are from Oakland.

### Widow of Murderer Weds Fifth Husband

Des Moines, Ia., Oct. 4.—Mattie Weeks, wife of Eugene Weeks, hanged for murder at the Fort Madison peni-

tentiary 18 days ago, was married at Adel, Ia., yesterday afternoon to a man who gave his name as George McCouley of Des Moines. According to Mrs. Weeks' testimony at her husband's trial here, McCouley is her fifth husband. She was married at the age of 12, she said during the trial, to Lou Cue, now serving a life term in the Missouri penitentiary for the murder of a child born to them. She divorced her second husband and also a third after he was sent to the penitentiary for 10 years for horse stealing. Weeks was her fourth mate. Wheat loss from black rust is estimated to average 4,000,000 bushels a year.

# THE BRANDEIS STORE

## Thursday—Wonderful Sale of 300 New Fall Suits

# 25<sup>00</sup>

Misses' Sizes 14 to 18  
Women's Sizes 34 to 44

An exceptionally successful purchase enables us to offer these well-made, good-looking suits at this low price. All are new Fall models and show a wide range of styles, including fur trimmed and severely tailored suits.

Black Navy  
Malay  
Zanzibar  
Hawaiian  
Second Floor

Many of the New Fall Fabrics Are Represented:

- Veldyne
- Duvet de Laine
- Tricotine
- Poirot
- Twill

Collars and Trimmings Are:

- Caracul
- Beaver
- Squirrel
- Wolf
- Nutria

The Styles

Severely Tailored Long Coats, Box Coats, Short Jackets, Straight Line Models, Flare or Ripple Models.

The Decorations

Braid, Rich Embroidery, Bright Buttons, Bindings and Luxurious Fur Collars, Cuffs and Bands.

# After Every Meal WRIGLEY'S

helps the stomach. After a hearty meal, try its friendly relief and comfort to the over-burdened stomach. It is the most beneficial and most satisfying sweet for old and young. And the cost is very small.

### New Autumn Frocks for Miss 6 to 16

—Combine Style and Service With Moderate Prices.

Smart little frocks with the distinctive touch of the clever designer are developed from the same materials that grown folks are so fond of. Canton Crepe, Satin Canton, Poirot Twill, Jersey and Velvet are fashioned into individual styles, full of youthful charm. Velvet, soft and silky, is used to make a straight line frock, relieved with side panels lined with rosy silk. Serviceable jersey is used to make smart little school dresses. There are numbers of dainty party frocks, street dresses and school frocks.

Priced From 15.00 to 39.50

Second Floor—West
