### THE CITY OF COLOR.

#### NEW YORK A PICTURE OF PLEASING CONTRASTS IN HUES.

**The American Metropolis In This Respect Surpasses All the Great Monotone Tinted Capitals of the Occidental World.**

New York has been written about from almost every possible point of view—architectural, commercial, political and social. Yet so far as we know it has never been properly appreciated for the one thing in which it surpasses all the other great capitals of the occidental world, and that is for its color. Those of us who live here all our lives or who absent ourselves for only brief and inconsiderable periods of time never know how extraordinary is the environment in which we have been placed. It is only the stranger with an artistic sense or the native who has been long away who gets the full effect of this city of ours in its unique prismatic floridity of hue such as vivifies no other city of its kind.

If you will think for a moment and visualize from memory the great cities of Europe as a colorist would see them you will be struck by the fact that each one is a monotone. London has the dull, dingy, smoky hue of its own November fogs, and as you pass along its miles and miles of streets, a welter of unvariegated facades and homely chimneys, your impression will be more and more that London is one great smudge, hideous and unreleaved beneath a sky of watery paleness which merely accentuates a little more the dingy hue of everything beneath it. Paris equally represents a monotone, a delicate gray that is neat and clean and that adds to the symmetry and harmoniousness of the whole effect, but that is seldom diversified by warmer tones. Berlin is a monotone in buff, and Rome, like Paris, for the most part, a monotone in gray.

One thinks at first of Naples as a city brilliant with the hues of the south, but a little reflection will show that it is not the city itself which can be rightly so regarded, but rather the setting of the city as one perceives it from the ship on which he enters the glorious bay or from the Capo di Posillipo. The intense blue of the sky, the emerald of the surrounding hills, the sparkle on the waters that lap its crescent shore, the huge dim slope of Vesuvius, with its golden smoke, and Capri in the distance swimming in a golden mist—these things afford an unforgettable dream of perfect coloring. But Naples itself? The place is as commonplace and dirty and depressing as Constantinople, which also from a distance cheats you into thinking it a colorist's paradise.

It is New York alone which, after delighting the eye with the beauty of its harbor, embraced by the long slopes of billowy green, fascinates the eye by the brilliancy and diversity of its color scheme. The sky is as blue as that which is arched above the Mediterranean. Its sunshine is as bright, and it is sifted down upon the city like gold dust scattered by a lavish hand. But the sky and the sunlight merely intensify the vividness of the color contrasts which are visible at every turn. Here is no convention, no conformity, no desire for harmonious effect. The snowy whiteness of marble and the clean gray of granite are everywhere intermingled with the cheerful buff or the warm, rich reds of brick. Patches of green appear at the end of every vista.

The enormous display windows of the shops are a riot of blues and yellows and pale rose and heliotrope and scarlet. Gilding catches and reflects the sunlight at every turn. Flags and streamers
