

**AGRICULTURAL CLUB
FOR COLLEGE SPIRIT**
Meetings Held Every Thursday Evening—Seventy-Five Members Now On the List.

The Agricultural Club is an organization of the men of the Agricultural College for the promotion of college spirit, good fellowship and for the development of interest in general agricultural topics. It is to build up a common interest among the men for the things that concern the welfare of the college, and develops a more intimate acquaintance than can be gained in the class room.

The club meets every other Thursday night at 7:30, and adjourns at 9, so that the meetings do not interfere seriously with the evening's studies, and at the same time are snappy and full of interest. The first part of the hour is usually devoted to an interesting address—along agricultural or other topics—given by some capable and well-informed man. After a short period of general mixing and conversation, any business that may come up is dealt with, after which the meeting adjourns.

At various times during the year the club gives hops to which the University public is at all times cordially invited. Good music is furnished, and

meetings—any meeting is open to all students who may be interested. The increase in membership has steadily kept pace with the growth of the college, and with the further expansion of our college a greater future is in store for the Ag Club. K. C. F.

**SCHOOL OF AGRICULTURE
POWERFUL FACTOR IN STATE**

School of Agriculture Is High School—College of Agriculture Is Part of University

Between the School and College of Agriculture there is a distinction that is not generally known even among university students.

The School of Agriculture is in reality an agricultural high school. It was founded about fifteen years ago with a small enrollment, and has steadily grown until today its enrollment is approximately five hundred. The same progress has been made in buildings and equipment as in enrollment. At present there are five good buildings and several minor ones on the campus. It would be well to mention the fact, however, that these buildings are used by the students of the College of Agriculture as well as by the students in the school.

This institution, with its buildings, equipment and force of instructors, offers splendid opportunities to those

between teams selected from the two societies, and a cup is given to the winners. The spirit of unity in the student body is encouraged by an annual banquet or reception given jointly by the societies. This spirit is further advanced by the work of the Young Men's and Young Women's Christian Associations, the school parties and dances, and last, but not least, athletics. A strong football team has been in evidence for the last two or three years. Their basketball teams have also made a very creditable record, standing out quite prominently, especially during the season of nineteen thirteen and fourteen, when they won the pennant in the city league. The knowledge gained thru these various organizations is considered secondary, but nevertheless an education would be incomplete without it.

Taking everything into consideration, the School of Agriculture has had a great influence in the improvement of agricultural conditions in Nebraska in the last five or ten years, and the prospects seem bright for a still greater influence in the future.

What is protein?

Ans.: Protein is to nourish the animal; but if it was only fed protein, it would soon be so big and fat and have such an appetite that it would be all it would possess, an appetite.

used for the temporary building. Plans are not yet sufficiently developed to determine exactly what buildings will take precedence in this plan after the three buildings above mentioned.

The growth of the work in Home Economics makes it imperative that the Home Economics building shall be modified, permitting new laboratories to take the place of some of the rooms now used for the dormitory. When these are finally equipped, the facilities for the Home Economics work will be greatly increased.

The department of Agricultural Chemistry needs much better provisions for its work. Should funds be available for the erection of a building to house this department, it may follow as the fourth permanent building to be provided for.

Agronomy also needs additional room, which must be provided either by vacating some of the laboratories now in use by other departments or by the erection of a new building.

The new Horse Barn which is likely to be built next year will be located north of the present beef cattle barns and possibly north of the central lane.

These several buildings will require large additions to the boiler plant, and the question of relocating the boiler house has been seriously discussed. If a new boiler house is to be built, it will be located to the northeast of the new campus.

Additional greenhouse facilities are required by several departments, but the permanent location for greenhouses has not yet been determined.

It is proposed, upon the vacation of the present Dairy Hall, to develop this building for a dining room and cafeteria to serve the needs of the Agricultural College. The location of this building does not necessitate its being destroyed in the development of the new campus, and it can readily be fitted up to furnish excellent accommodations for feeding students at a minimum cost.

**TRIBULATIONS OF
AGRICULTURE FROSH**

Many and Confusing Names Embarrass the First Year Agriculturist—Needs Help

It was a day long to be remembered in the life of the lonely freshman. As he stepped out upon the deck of the Noble ship, a brisk breeze from the Lee-ward told him that he was entering the harbor of Agri-Col. The day was still Young; far off before him Loom(i)s up the Beach, upon which was now visible a Pier, which he reached with the Dean at the Helm. In order to Gain time he Hopt quickly ashore and looked for a place in the Avery. This being crowded, he took his Seat-on the Hood. On the way to the farm the car lost a Burr, and he continued his way on a Clyde Filley. Crossing the Bradford, he saw a Baer, which was shambling Woodward, and gave Chase. He was soon lost in the Wood. Now Morr-ill appeared—he was famished, with nothing to eat but a Plum. This was no Love-land for the little Medlar. He soon became downhearted and sobbed, "Dad Burnett, I wish I was home." A. V. K.

"N" FOBS TO BE PRESENTED TO TEAM MEN

Thirteen Men Will Be the Proud Wearers of Fobs—List of Candidates Mentioned

The "Ag" Club will present "N" fobs to thirteen men this year. The dairy team contested with teams from fifteen states at the National Dairy Show on October 23. The apple team went to Des Moines this week with the expectation of retaining the loving cup. Due to foot and mouth disease, and consequently the postponing indefinitely of the Chicago and Kansas City shows, the fat stock team had to satisfy its desire for contest in winning first in a local one held November 21. The following men will receive fobs:

Dairy Team—A. C. North, E. W. Kuhn and B. H. Thompson.

Fat Stock Team—C. R. Weber, J. J. Wren, H. R. Harley, J. B. Rice and L. L. Aker.

Apple Team—P. H. Stewart, C. W. Smith, H. A. Jones, O. W. Sjogren and S. H. Whisenand.

**FRUIT JUDGING TEAM
LEAVES ON MONDAY**

Professor Cooper to Accompany the Team—Go to Des Moines—Other States Have Teams

The fruit judging team, accompanied by Prof. J. R. Cooper, left Monday for Des Moines, Iowa, to take part in a fruit judging contest to be held there. Kansas, Missouri, Iowa and Illinois are the other states sending teams. The squad has been putting in some very hard work with the result that a strong team has been developed.

The silver loving cup offered by the Twentieth Century Farmer to the team winning first place three consecutive years is now held by Nebraska. It is to be hoped that the team this year will uphold last year's record. The men who represent Nebraska are: Paul H. Stewart, Henry A. Jones, C. W. Smith, Stephen H. Whisenand and Oscar W. Sjogren.

Prize Cattle at State Farm

they are always managed in a strictly businesslike way, while everybody is treated in the most democratic manner. Tomorrow night the second Ag Hop of the season will be given at Rosewilde Hall. The committee have spared no efforts to make this one of the best hops of the year.

Another activity is the publication of "Agriculture." This little magazine is full of life and is one of the best publications in the University. Each month, for nine months of the year "Agriculture" presents a compilation of Ag student sentiment, and articles of general agricultural interest, submitted by agricultural students. So far this year, under the management of Editor-in-Chief R. J. Posson and Business Manager H. O. Smith, the paper has been a marked success.

Every year the club awards gold "N" watch fobs to the men who have made the fat stock, dairy or fruit judging teams. To become a member of any one of these teams the student is required to try out as he would to make any athletic or debating team. These teams compete with other colleges in contests, and in representing their college they must work alone, for no audience can cheer them on. The wearer of an "N" fob has striven alone.

At present the membership of the club is about seventy-five; however, membership is not necessary to attend

who wish to secure a practical education and return to the farm as well as to those who wish to prepare for college. Credits from an eight grade school are required of a student who wishes to enter. With this credit, the course offered can be finished in four years. Students having high school credits can finish in less time. To secure a diploma a complete course in the agricultural subjects must be taken. Only such high school subjects as the student lacks credit in are required. If registered in the college preparatory group, the graduate is eligible to register as a freshman in the university, and has a good foundation on which to build a higher education; while if a graduate from the practice group, where the course in itself is quite complete, the student may go home well equipped to become one of the most successful farmers in his community.

The social side, which is so necessary to the successful career of a man or woman, both in and out of school, has not been neglected. Within the school are various organizations. Prominent among these are the Davisson and Ophelian literary societies. Every student is urged to become a member of one or the other of these societies, and after becoming a member is expected to take a part in their programs as often as possible. To encourage better work an annual debate is held

NE WAG BUILDINGS

(Continued from Page One)

the building are more advanced than any others under discussion.

The urgent necessity for an Auditorium and for additional library facilities has led to the discussion of a Library and Auditorium building, to be located at the south end of the campus, near the main entrance to the grounds. The architects' plans show a building located across the south end of the main quadrangle, near Holdrege street. If this plan should be finally adopted, the Auditorium and Library would be the building to occupy this site. This building would be developed to furnish additional room for administrative departments and classrooms for the general use of the School and College work.

The need for an athletic building and drill hall for the use of the School of Agriculture has led to the consideration of an Armory and Gymnasium which would satisfy this demand. The location provided by the architect for the Armory is at the north end of the main quadrangle. If a permanent building is erected at this time to take care of physical training and drill, it will be located upon this permanent site. There has been some discussion of the erection of a cheap and temporary building for this purpose, and should this arrangement finally prevail, the permanent site will not be
