**DR. CONDRA CHECKS SURVEY
OF STATE POTASH FIELDS**

Several Plants in Northwest Have
Total Daily Output of Nearly
Four Tons

Dr. G. E. Condra, geography and conservation department, and party returned Sunday from a trip to the potash fields in the northwestern part of the state. The object was to check the survey of the fields and to visit a few potash plants in western Nebraska.

This survey of the potash fields was made this summer. The work done this year consisted for the most part of mapping the locations of the various lakes, and collecting samples. The work was by no means easy. Sometimes it was necessary to run a line for a distance of four miles to get accurate results.

In all, the survey covered about 350 lakes, located in southern Sheridan, northeastern Morrill, northern Garden and southwestern Cherry counties. There are thousands of the lakes in this district. Some of them are no larger than a mere pond, while others cover a quarter section of land. They range in depth from a few inches to a few feet. Some potash is found in the lakes, but the most of it comes from below the lake beds. It is pumped up from a depth of from ten to thirty feet. There may be as many as 200 pumps in a single lake.

The potash is reduced from the alkali waters in the lakes. It is pumped through pipes to the plants where it is boiled down to a high degree of concentration and brought through different processes to a solid state. It is finally ground and placed in bags for shipment to all parts of the country. The southern states use more of it than any other district.

There are now four big companies producing potash. Two of the plants are at Antioch, and one each at Hoffman and Lakeside. These are located along the Burlington, from fourteen to twenty-eight miles east of Alliance. A large plant is now being built a Antioch, and plans are being made for the erection of two or three more. The total output is three or four tons daily. About twenty per cent of this is potash.

The survey work on hand will be finished by November. The next thing will be the chemical work, to be done in the laboratories of the University. Next year some more detailed studies of this work will be undertaken by the department.

**PHARMACY DEPARTMENT
RECEIVES DRUGS**

Some Are From Asiatic Countries
—Cost Has Advanced One
Thousand Per Cent

The department of pharmacy received a shipment of chemicals and drugs yesterday from Chicago. The shipment was delayed six weeks as the Chicago firm had difficulty obtaining the supplies.

"It is getting to be quite an event to receive an order of such chemicals," Dean R. A. Lyman, head of the department of pharmacy, said, pointing to the boxes and barrels that were being unpacked.

Most of the carefully wrapped packages come from the Asiatic countries and are valued highly. Their cost has advanced from 100 per cent to 1000 per cent, Dean Lyman estimated. This is caused by uncertain trade conditions.

**WILL TAKE MOTION
PICTURES OF UNIVERSITY**

Geography Department Will Film
Farm Views and Football
Games for High Schools

The department of geography and conservation is planning to complete the University motion picture films this fall. To date, two large reels have been made, showing the various departments and their work, in the University proper. The department plans to make two reels of the same nature showing the farm, and one reel showing the complete story of the Boys' Corn club organized by the University. It is also planned to take two reels of pictures of football games here this fall, and to take some general views of interest about the campus. This will make a total of over 6,000 feet of films owned by the University. When completed, these reels will be released under the direction of Prof. A. A. Reed, head of the University extension department. They will be used principally in the high schools throughout the state.

Art Club Wiener Roast.—The Art club held a wiener roast picnic last Friday evening at Antelope park. Songs were sung and ukuleles played and later in the evening readings were given by Marguerite Polk, Earl Starboard and Herbert Yenne.

Think Ahead!

These are the days when care
of your figure will count as the
years go by.

For your figure the corset is
responsible.

*Reform

THE UKULELE

THE languorous charm of the
Hawaiian native instruments—so
moving in appeal, so observably
in vogue—is strikingly character-
istic of the Ukulele. Its tone possesses that
curiously beautiful timbre, that exotic
charm of tonal quality which has
made these instruments so sensation-
ally popular.

The Ukulele has a pleasing grace of
form. The finer models are made
of genuine Hawaiian Koa wood. It
is much in request today among the
smarter college and other musical
organizations.

It is easy to learn. Its price includes an
Instruction Book.

Hawaiian Steel Guitar

Every chord struck upon this typically rep-
resentative Hawaiian instrument is marked
by a weird, plaintive harmony and strangely
beautiful qualities of tone. It brings, to any
music, qualities full of vivid color and var-
ied charm.

Price \$8.00 and upwards, including Steel and Set of Three
Thumbies for playing, and Instruction Book.

Catalogs on application.
