

THE DAILY NEBRASKAN

Published Sunday, Tuesday, Wednesday, Thursday and Friday of each week by the University of Nebraska.

Acceptance for mailing at special rate of postage provided for in section 1103, act of October 3, 1917, authorized, January 28, 1922.

OFFICIAL UNIVERSITY PUBLICATION

Under the direction of the Student Publications Board.

Entered as second class matter at the postoffice in Lincoln, Nebraska, under act of Congress, March 3, 1879.

Subscription rate, \$2.00 per year \$1.00 per semester

Single copy 5 cents

Night Editor for this issue, CHARLES A. MITCHELL.

ANOTHER AWGWAN

Old Man Awgwan is on the campus again, brim full of spicy wit and humor, laughable from cover to cover. It is his Flapper Number and he more than does justice to the subject. His comparison of the flapper to the month of March is clever and timely.

Get your copy of the Flapper Number and read it from beginning to end. It is a dandy. It carries a big kick.

We are reprinting here Old Man Awgwan's editorial, "Speaking of Flappers." We agree heart and soul with it in every detail. Don't you? Here it is:

Speaking of Flappers

Where the name Flapper originated is a matter of conjecture. Possibly the name came from the uncouth galosh and its activities during a stroll or again possibly it is from the general maxillary activity attributed to the sex to which the name has been applied. Be that as it may the co-ed of today is a Flapper.

Pretty name isn't it girls? We like it, NOT. Think it's nice, Want to keep it? If you do, just keep up the line that has been gradually growing worse each year until co-ed became to demure an appellation for the college girl.

Galoshes, rolled hose, cigarets, general feminine attire, and the indifference of college girls has at last thrown this name upon them as a curse. The press of the nation is, today, engaged in trying to define, describe and explain the Flapper. Those descriptions are anything but complimentary. What are you going to do, girls?

The general impression given by the name Flapper and the definition usually promulgated by the person who attempts to enlighten the world on the meaning of the Flapper gives an impression that college girls are slapsly, big blue-eyed babies, brainless to the Nth power, indifferent, cigaret smoking creatures who make poor couch covers at the best. The world is gradually beginning to think they are right. What are you going to do about it girls?

VACATION

All thoughts of books and classes, instructors and examinations, are tossed to the four winds tomorrow—spring vacation begins. For one week school will be forgotten. All students will concentrate on eating, sleeping, and having a good time—except those foolish virgins who have not taken advantage of the past nine weeks and are not ready for the joys of vacation. They must use the recess period to do what they should have done before.

Many of us are going home. We haven't been there since Christmas and it will be great to see the folks again and push our feet under the family table landed with our favorite dishes.

And after the week of vacation is ended, we are coming back and hit the old stride with renewed vigor and push through to a Garrison finish next June.

Have a good time, everybody.

Contemporary Opinion

WATCH YOUR HEALTH

This is the time of the year when colds are common, when the vagaries of the weather bear watching. During a warm spell in the winter one is tempted to discard heavy overcoats and underwear and throw caution to the winds. It is not uncommon just now to see some reckless spirits walk down the avenue overcoated as though it were mid-summer. This is unwise because the temperature of the body when not sufficiently pro-

ected is lowered below the point of health and comfort. The body is chilled and rendered less immune to the invasion of cold-producing germs.

Insufficient sleep also plays a part in diminishing the power of resistance to colds. One should get his quota of sleep every night. Eight hours for sleep is a good slogan to adopt. The brain of the student cannot be clear or his nerves steady if he has denied himself sufficient sleep which Shakespeare calls nature's chief restorer.—Marquette Tribune.

Ruth Norris, '25, and Dorothy Van Vranken, '25, will be guests of Helen Spellman, '24, and Lucille High, '25.

MASSACHUSETTS CONCERN CONDUCTS ESSAY CONTEST ON INTERESTING SUBJECTS

Three prizes of \$500, \$250 and \$100 respectively have been offered by Babson's Statistical Bureau for essays on any of the following subjects: Effect of Religion on the Business Cycle; Relation Between Labor and the Business Cycle; Why Business Men Study Business Cycles; Forecasting the Purchasing Power of a Sales Territory; Analyzing an Industry to Forecast its Activity; Analyzing Commodities to Forecast their Price Trends.

The contest is open to any under graduate student officially registered in any college or university, the essay must contain at least 3500 and not more than 5000 words and must be typewritten on one side of the paper only, and must be in the hands of the company by May 15. No statistical information will be given out by the company during the contest to persons entering. Graphic illustrations are permissible.

Further information concerning the contest may be obtained from Professor E. D. Strong or by writing the Contest Editor, Babson's Statistics Organization, Wellesley Hills 52, Massachusetts.

Y. M. C. A. IS REQUESTED FOR COPIES OF "N" BOOK TO BE USED AS MODEL

Bill Day, secretary of the University Y. M. C. A. has recently received letters from several different colleges requesting him to send them copies of the 1921-22 N book to be used as models for like books in their respective schools. This shows that old N. U. is well known over the country and that she is looked up to as a leader.

As you know, these handbooks are edited by the University Y. M. C. A. and these letters are proof of its efficient work. In view of the much talked of theme of "selling the university", can you ask for a better means of publicity. In addition to and of greater importance than this good reputation this organization is giving to the University it is doing a commendable work on the campus such as working with the foreign students and giving free employment bureau service. Therefore it is obvious that every loyal Cornhusker should be an enthusiastic supporter of the Uni. Y. M. C. A.

PROF. CANDY RECEIVES INVITATION TO ATTEND NATIONAL MATH MEETING

Professor A. L. Candy, Dean of the Department of Mathematics recently received an invitation to attend a national mathematical meeting to be held at Bryn Mawr College, Philadelphia.

This meeting will be given by the former students of Bryn Mawr College in honor of Professor Charlotte Angus Scott, D.Sc., who has just completed her thirty seventh year as head of the Department of Mathematics at Bryn Mawr. An address of welcome will be given by President M. Carey Thomas Ph. D. L.H.D., and an introductory address by Miss Marion Reilly, A.B. The speaker will be Professor Alfred North Whitehead, Sc. D., F.R.S., Professor of applied Mathematics in the Imperial College of Science, South Kensington. His subject will be, Relativity of Gravitation. Group Tensors and their applications to the Formulation of Physical Laws.

ACTIVITIES BEING KEPT DARK AND MYSTERIOUS ABOUT ENGINEERS WEEK

Ye reporter thought that he might secure some advance dope on what the various engineering departments were going to show to the inquisitive public this coming engineers week and thus hid himself to the sacred domain of the engineers and inquired of the powers that be there what they might have up their sleeve for this noted affair. However the goings on for this night seem to be of great secrecy as though they promised that the engineers were going to put on such a show that the like had never before been seen in Lincoln, no hint of what this might be could be ob-

tained. Dark hits have been made that the engineers were fashioning monstrous animals in their laboratories, with which they were going to invade the Law College and put the followers of Blackstone to flight and while this was not denied neither was it confirmed.

Without doubt the celebration is going to be of such splendor and magnificence that the engineers are loath to impart to a mere journalist what their plans are going to be, but from our past experience we know that when the engineers set out to do a thing and are as secretive as this it must be very good indeed.

Let us wait with patience until April 27th, and then our highest expectations will be realized.

FRED H. RINGE TALKS ON HUMAN ENGINEERING

(Continued from Page One.) By diagram, Mr. Ringe showed how there were five requisites for successful industrial growth. They all begin with the letter M and are as follows: Money, Materials, Machinery, Merchandizing, and Men. The chief difficulty with so many of the European countries at the present time is that they lack one or more of these factors.

The success of industry was also shown to depend upon five factors as shown by chart beginning with the letter C, Commerce, Capital, Credit, Confidence, and Character.

The last items in these two lists are sometimes considered the most important. By many employers, the character of an employee carries much more weight than the Technique.

As stated before the engineer serves as an intermediary between capital and labor and Mr. Ringe stated that the labor situation could be much more easily solved if they worked face to face instead of back to back as they so often do. The turnover of labor, which is due in a great measure to misunderstandings, may be greatly decreased by this method, and when a person understands that from one hundred million to one billion dollars are lost annually in the United States from this cause alone he will understand the importance of the question. All this is within the scope of the engineer's work.

Definition of an Engineer The definition of an engineer was given as follows:

Engineering is the art of organizing men and utilizing the materials and forces of nature for the benefit

of the human race.

The engineer often serves in the capacity of a manager and the duty of a manager is to make men as well as profits.

Welfare work is a term which has often been misused but when it is understood and the correct methods applied the results are very beneficial. The more democratic methods the better the results. The best progress made along this line recently is industrial representation. The more authority and control given to the workers the more conservative they have been found to become. The government of the industry is often patterned after our national government with a house and senate and they make the regulations for the working conditions.

College men should and are preparing themselves for the proper carrying on of this work. The engineering curriculum in many colleges are including courses for individual study. Sherwood Eddy in his recent talks here mentioned several works and Mr. Ringe gave a short list of articles which had appeared recently in some technical magazines.

Personal Touch Needed

The engineer needs the personal touch of feeling to be truly successful. This might be learned on the campus but it is invaluable and if it could be learned here the graduate would be that much better off. The engineers have here in conjunction with the Y. M. C. A. a chance to teach Americanization and many other subjects to the workers who are here in Lincoln, and thus not only be a service to the workers but also a distinct advantage to the student. If an engineer cannot handle five men in a study group like this he will not be able to handle a piece of engineering work when he graduates.

Working men should swear with and not at their employer and they will do so if the man under whom they are working is thought to have an interest in their well being and not treat them as a piece of machinery, to be discarded when useless.

At the close of the talk Mr. Ringe presented all with some copies of short poems which presented very vividly the attitude working men akes to the right kind of an employer or foreman.

STUDENTS desiring work next week should see Mr. Gilbert 12 to 3 p.m. this week at the Grand Hotel.

"What's the charge this time, officer?" asked the Judge

as a well known character was brought before him.

"Impersonating a gentleman; 'How's that?'," queried the judge

"He was wearing a Kuppenheimer suit, sor," explained the officer
