and His MERRY MUSIC MAKERS
Featuring "GANGES"
SHOWS AT—2:30, 7:00, 9:00.

Two Years Ago

Miss Margaret Fedde, chairman of the home economics department, returned from her trip to Washington, D. C., where she attended the Land Grant College meetings, Purdue University and the University of Missouri were also visited by Miss Fedde. A new home economics building was erected at each of these institutions. Mr. W. A. Norris of the University

of Nebraska in 1918 and former assistant in the Geography department was in charge of material testing for the Wyoming Highway Commission at Cheyenne. The commission started the publication of "Wyoming Roads," a very commendable highway magazine setting forth the present road situation of the state. The Exhibit of Geography materials put on display by the department during the meeting of District 1 of the State Teachers association was attended by 500 visitors.

Just where do the styles come from anyway?

In England, of course, the matter has been made very simple. The whole thing is left up to the Prince of Wales.

You can see at once how easy that makes the clothes question for the Britishers—

When the Prince takes a quiet stroll about London, accompanied by a regiment or two of cavalry and six military bands, all the villagers take careful note of the royal costume.

Then each loyal subject rushes overt to Bond Street and buys one exactly like it.

Over here, we have no Prince worth putting in the saddle, and the movie heroes are too jealous of each other for any one of them to take the lead. There's nothing to do—when it comes to college clothes at least—but let the styles be decided by the men who are going to wear them. Sounds rather reasonable, at that. Our college men know clothes and they have their own ideas as to what they want to wear. We'd back their judgment against that of royalty any day!

P. S. We carry Society Brand college clothes because they are designed exactly as college men have said they should be. You'll not find any more distinctive clothes anywhere.

Moro Weapons Are In Kansas Museum

Lawrence, Kansas, Nov. 30.—A collection of Moro weapons has been received by H. T. Martin, curator of the anthropology and paleontology collections in Dyche museum at the University of Kansas, and has been added to the growing collection of native Philippine articles.

The Moro collection was made by Henderson Martin, former vice-governor of the Philippines, during his term in the islands, and was sent by him to the University. The collection consists of two machetes or "barongs," two swords, and a long spear, with scabbards.

"These weapons are especially valuable to the University," Mr. Martin, the curator, said, "for we know they are genuine ones, having seen use in battle. In a few more years it will be difficult to get such specimens, for they will have gone out of use, and will be manufactured solely for sale to collectors."

However, their very genuine nature makes the curator nervous in handling them, for, as he expressed it, "one never knows what kind of virulent poison has been put on their blades, nor when one will get cut."

South Dakota Selects Womens Debate Team

Vermillion, S. D., Nov. 29.—Selection of the debating teams which will meet the women's debate organizations of Dakota Wesleyan and South Dakota State college, December 2, was announced today by Harry G. Barnes, debate coach at the University of South Dakota.

The question for the triangular debate is the adoption of uniform marriage and divorce laws in the United States. The debates will be of the open-forum type without judges' decisions.

Indiana Coeds Have Better Health
Coeds at the University of Indiana are losing "that graceful silhouette" according to the women's physician at the school. She says that fewer girls are deliberately starving themselves to keep down their weight and as a result the health average has been raised materially.

Waddell Criticizes Engineering Education in Blue Print Article

Constructive criticism of engineering education is given in J. A. L. Waddell's article entitled, "In What and Why Does Engineering Education Fall to Attain Its Greatest Possibilities?" the second of a series, in the November number of the "Nebraska Blue Print" published by the student chapter of the Nebraska Engineering Society.

Improvement should be made, according to Mr. Waddell, along three chief lines, namely better instruction, more thorough and simple courses, and students of higher class. All frills such as foreign language, elaborate courses in economics, literature and the like, should be eliminated. Specialization with more complete requirements and the electives restricted, condensing of courses so as to cover as short a time as possible; thorough knowledge of the use of mathematics as required in practice; a working knowledge of the English language; good knowledge of the fundamentals of physics and chemistry; training in mechanical drawing and the rudiments of surveying and measuring, and a descriptive course of engineering materials and general business methods are among the writer's recommendations.

More care should be exercised in the selection of entrants to the schools of engineering, Mr. Waddell believes, so that only those of high caliber, sound basic education, and large futures may be trained as far as possible. Carrying of incompetents is unfair to themselves and to the competent. A constant supply of high caliber applicants might be insured by establishments of preparatory schools in connection with the higher schools.

Bethany Circle Pledges Named

Theta chapter of the National Bethany circle, an organization of university women who belong to the Christian church, held a pledging service recently, at which the following girls were pledged: Lolita McNeal, Velma Wood, Frances Boomer, Helen Knapp, Ruby Stansted, Bernice Pardee, Elva Erickson, Esther White, Olive Seymore, Faye Martin, Helen Anglis, Lucille Hac, Arvella Hanson.

Earlier pledges were: Dorothy Mercer, Mary Harmon, Sylvia Cole,

Much has been said of lengthening the school period of engineers from two or three years to five years. Better ways of augmenting the output can be found, such as developing in the students a true love and admiration for the profession of engineering and a consequent increase of their capacity, or shortening the useless and interfering holidays which cut down so materially the working hours of the students.

There is much abuse of the lecture system which is one of the fundamental causes of lack of efficiency in engineering education. Principal objections as summarized by Mr. Waddell are: the lecturer does the hard thinking instead of the student; lectures are quickly forgotten unless notes are taken during the discourse; it is not feasible to simultaneously take notes and listen attentively to all the lecturer is saying; numerous mistakes are made in taking lecture notes, and when the records are studied or referred to later, the said mistakes are both misleading and exasperating; any lecture that is worthy of being taken down as notes by the hearers is certainly worth being printed in pamphlet or book form by its author; lectures and lecture notes involve an extravagant use of the student's time and are, therefore, objectionable on the basis of true economy.

The writer recommends the division of the training into three stages of advancement so that each student may find and be taught in his own level. In the lower levels specialization should begin with few elective courses so that discipline could be more severe, training more broadening, and talent more developed as the students get deeper into their professional education.

The board of regents of the University of Colorado has appointed Miss Louise Kienenger of Omaha, Nebraska, superintendent of nurses at the university.

Marguerite Hac, Lois Oberlies, Eloise McAhan.

The officers of the year are: Genevieve Miller, President; Ruth French, Vice-President; Edna Johnson, Secretary; Ariene Sherfy, Treasurer; Dorothy Knowles, Corresponding Secretary.

Theta chapter was installed at Nebraska last spring. The organization was formerly local and was known as the Ecclesia Club.

The board of regents of the University of Colorado has appointed Miss Louise Kienenger of Omaha, Nebraska, superintendent of nurses at the university.

Registrar's Office Keeps All Records

(Continued from Page One.)
In recent years, there have been a number of foreign students whose standing has been determined in this manner.

High School Credits Filled
A complete file of the credits of every graduate of an accredited high school in the state has been kept since 1892. All any Nebraska high school graduate has to do is to notify the registrar's office that he will attend the University and a transcript of his credits will be forwarded to him ready for registration.

A complete record of all students attending the University is kept. The only reports from the instructors are those made at the end of the semester. The grades are recorded from the cards to the registrar's records, checked from the record to see that they agree with the cards, and then the cards are mailed to the students.

Secretary of Faculty
The registrar is the secretary of the faculty of every college. In this capacity, the registrar has to keep the minutes on every faculty meeting. The registrar recommends the seniors to their respective faculties for graduation. The faculty in turn recommends their graduation to the Board of Regents.

Full time for one person is used in checking credits. One person gives half time in the winter to transcripts, that is, just copying the credits for records. Another half person's time is used in compiling statistics which have to be furnished by the registrar. Statistics have to be compiled in regard to all scholarship requirements of the University, eligibility for fraternity or sorority initiation, and for averages for honor fraternities. Full time for two persons is spent checking on seniors' requirements, delinquencies, etc.

Fees are Checked Here
The registrar's office has to check on all fees. The registrar is responsible for seeing that all fees are paid although having nothing to do with collecting them. The enforcing of the military science and physical education requirements also requires constant checking from the registrar's office.

With the increased enrollments of recent years, the identification of students has become quite a problem. Students with identical or very similar names are no longer unusual. It is this difficulty which is responsible for insistence on accurate recording of full name and related data at registration. In several cases confusion has been caused due to similarities in name which more complete information might have avoided. Another trouble has been the tendency of some students to use one name one time and another name another time.

The records of the office are brought completely up to date at the end of each school year. At the beginning of each year, a vast mass of material has to be inserted in the records. It takes two or three weeks to get the records back on a working basis after registration.

Joint Service and Recording Office
The registrar's office is, then, a joint service and recording office. A tremendous amount of records has to be kept in order to have the particular records which may be wanted from time to time. Accuracy and speed are the fundamental aims of the office. The records must be right. And they must be kept up to date.

Balancing the close mechanicalness of the record-keeping of the registrar's office is its miscellaneous information service. Both functions are valuable to the student. The information is a help, a distinct service and one which could be rendered with difficulty by any other office on the campus. The records are a necessity. Both make the registrar's office a spot of prime importance to every student and one whose continued efficiency is to the interest of every student.

Good taste and good health demand sound teeth and sweet breath.

The use of Wrigley's chewing gum after every meal takes care of this important item of personal hygiene in a delightful, refreshing way—by clearing the teeth of food particles and by helping the digestion.

The result is a sweet breath that shows care for one's self and consideration for others—both marks of refinement.
