NEW COURSE IS OPEN TO FARM OPERATORS

Young Men From All Parts Of State Express Wish To Be Enrolled

Keen interest is being shown in the first Farm Operators course to open in about a month at the agriultural college, according to H. E. Bradford, principal of the school of griculture, who has charge of the ew course.

young men from all parts of the tate have written that they would ike to come in as soon as the fall work is done and the corn is out. The first term starts November 26, he second term January 28. Each erm is eight weeks long.

A second year's work is planned, but will not be offered until next year, when the men who come in this year will be ready for it. Those who complete four terms will be given a certificate by the college. Extremely practical courses regarding livestock, crops and soils, farm engineering, livestock disuses and pests, poultry, dairying, erchards and gardens, farm mangement, record keeping, and marseting will be offered in the two Instruction is to be given by the regular college faculty and il the facilities of the institution will be availabe to the short course students.

Must Have Experience

sithout an eighth grade education her end of the production well, will be admitted under special arrangements. Everyone who enters nust have had at least a year of practical experience on a farm beore enrolling.

All subjects given are intended o help the young men on the farm with the problems they now have starting their farm operations, good share of the teaching will

MAN MAY BE ABLE TO DIVE LIKE A WHALE

Anatomist Is Making Study Of Aquatic Breathing Apparatus

Baltimore-(IP)-To prepare the way for the discovery of an appliance by which man will be enabled to remain under water and survive, Dr. A. Brazler Howell, anatomist. who has just joined the faculty of Johns Hopkins university, is making a study of the whale.

The whale, he says, possesses a secret which, if it could be comprehended, might be of incalculable benefit to mankind. That is the method of disposing of the carbon dioxide which he generates in his blood during long periods under water, sometimes exceeding an

Some chemical adjustment takes place in his body which makes it possible for him to consume his own poisons or dispose of them. An understanding of this process. Dr. Howell explains, might lead to the invention of an appliance which would have a definite bearing on aubmarine and mine disasters and

th work of relieve If the chemical formula by which the whale "consumes his own smoke" so to speak, could be found. be able to reproduce the condition in the humar body. That is only one reason which has turned Dr. Howell to studying the whale, which he says, is the only one of the higher mammals that can stand the water pressure at the depth of a mile:
