**THE MOST WOODERFUL STOVE IN THE WORLD.**

Read How the Stove Was Tested.

F. & L. KAHN & BROS.  
GENTLEMEN—This is to certify that I have made a series of tests with your Estate Oak Heating Stoves, to determine, first, how long the stove would hold fire; second, how the several parts of the stove would act under a high red heat.  
I fired the stoves repeatedly until they were red hot all over. I heated them to the highest possible temperature and cooled them off as rapidly as possible. Under those most severe tests the expansion and contraction did not affect the plates in the least particular.  
The stoves stood on the third floor of your five-story warehouse, with about fifty feet of flue length, including stovepipe, giving excellent draught. I charged one of them with one and one-half small bucketfuls of coal slack on Tuesday evening, June 30, 1891, at 5 o'clock. When the fire was making large sheets of flame the screw registers in the ash-pit were closed, the poker-hole register in the feed door was closed, and the check register in the pipe collar was opened, and all remained so to the end of the test.  
Until the following Thursday afternoon at 4 o'clock the body of the stove continued to be so warm that a hand could not comfortably be laid upon it. After that time it began to cool off. The live coal from the original charges of slack above referred to were visible until 10 o'clock and 15 minutes of the evening of that day.  
It will therefore be seen that this stove actually held fire continuously for fifty-three hours and fifteen minutes. This is an extraordinary record, and one of which you can well be proud.  
Respectfully submitted,  
HAMILTON, Ont., July 2, 1891.

We control the sale of this stove for Omaha, South Omaha and Council Bluffs, and carry it in all sizes. We guarantee them in every respect, and this Oak Stove is as far ahead of other Oak Stoves as an electric motor is ahead of the old horse car.

**Crockery & China**
