Efforts of the Government to Make the Dry West Put on a New Face.

PLANS OF THE AGRICULTURAL DEPARTMENT

Glowing and Picturesque Prospects Promised by Officials in Charge of the Work of Reclamation.

A great inland conquest is being waged by the Department of Agriculture which is advances this novel theory declares that completely overturning the time-honored theory that the wast areas in the west added a record of his patients' hair or lack which cannot be irrigated can never be of it his case cards have failed to show a made to produce anything but a scant natural growth of grass. The engineer and upon the card of a consumptive. the ditch builder will bring under cultivation many millions of highly productive acres, but the water supply of the west is that in a census of more than 5,000 tuberlimited, and there will remain perhaps half billion acres of the arid region for which there is no water. The aggressive work of Secretary Wilson's department, however, promises fair to make a very large proportion of this land, heretofore supposed to be entirely unfit for agriculture, into farms through scientific methods of soil culture of a bald-headed consumptive coming under and the introduction of exceedingly drouthresisting plants.

"There are no had acres," said Secretary "We have no useless American acres. We will make them all productive.

lands, for the growing of special arid land crops requiring but a fraction of the motature necessary for the growth of ordinary plants such as corn and wheat. "We are table lands of Turkestan and the stoppes of Russia and Siberia, which grow luxuriantly under such conditions of aridity that the crops of the Mississippi valley farms would wither and die as though scorched by a

Macarchi wheat affords a good instance of a crop which is capable of revolutioniz-

of arid land.

"The macaroni wheat belt," said Mark A. Carleton, cereal specialist of the Bureau of Plant Industry, "extends, on an average, the width of the United States and from the 98th to well beyond the 102d meridian, with a general yielding capacity for half of this vast area of thirty bushels an acre, and of the other half of fifteen bushels.

inches of rainfall and yield fifteen bushels to the acre, where ordinary wheat is an bsolute failure. This is two bushels more United States. There are many other crops with as great possibilities and which thrive on but slight moisture, including splendid forage plants. I might mention kuffir corn, he sorghums, millet, brome grass, as well as new kinds of oats and barleys of wonderful drouth-resisting powers, the emmer or speitz, and a long line of others. ere constantly finding new grains and forage plants in the Caucasus, in Algeria, furkestan and other dry countries which will bring under cultivation amazing areas of the great American desert, now looked upon as absolutely unfit for agriculture. It is a somewhat singular thing that no men are as skeptical of the reality of these facts as the residents of this region, but our experiments have already proved what I have said to be actual facts, not theo

Dr. Harvey Wiley, the agricultural chief chemist, says that the sorghums form a very fine stock feed and that their cultivation, along with the millets and other of the desert crops, where corn is an entire failure, insures a vast future development

for that great section. Improved methods of culture and tillage in connection with the planting of these hardy drouth crops will change the face of nature throughout entire states. By what is known as the Campbell system of soil culture, the lands of western Kansas, Nebraska, Colorado, and, in fact, wherever there is a deep loam, but where the rainfall is only fourteen or fifteen inches, can be made to produce heavy crops of grain, while forage plants and orchards and vegetables can be very successfully grown. By sub-surface packing of the soli and continual surface cultivation all of the meager rainfall is conserved in the soil for plant use. Prof. Campbell states, and has demonstrated, that by this method "dry farming" can be carried "to the foot of the Rockies," while the semiarid farm lands to the east can be made

to produce double crops. All in all, if but a portion of the remarkable work which the Department of Agriculture is carrying on bears the fruit which the men working upon it predict, the country will see, in the next decade or two, a development of the one-time supposed useless and fearful great American desert, which will be a source of in creasing astonishment to the conservative agricultural student .- Guy E. Mitchell in

No room for argument. Sheboygan Splits

Forced thereto by the fear of consequences in the next decade, three papermaking companies of New York have

adopted a system of referestation. Hun-

REDEEMING THE ARID BELT dreds of trees, furnishing wood pulp and from Germany and thousands upon thousands of acres denuded of their forests are to be replanted and care taken that the reforestation proceed rapidly and generally.-Cleveland Leader.

Bald Heads and Disease,

There are advantages accruing even from oald heads. It is pointed out by a writer in a medical journal that bald-headed men never suffer from consumption and that a tendency to baldness is an assurance that the dreaded scourge will pass over him whose thatch grows thin.

At first glance it would seem absurd to argue that a man's hair is indicative of his immunity from disease, but the writer who in the five years during which he seriously single instance of "bald" being entered

He had under treatment more than 700 cases and he makes the further statement culosts cases he failed to discover a single sufferer who was bald.

He makes no effort to explain his theory upon medical grounds, but simply offers the results of his observation for the benefit of the profession and has invited his brother physicians to write him of any case their observation.

WEATHER IN THE GRAIN BELT Scattered Showers in Upper Valleys and Heavy in South.

OMAHA. May 27, 1906.

Scattered showers occurred throughout the upper Mississippi and Missouri valleys and west within the past twenty-four hours, and rain is falling in the north-west, mountain districts and southwent this morning. The rains are very heavy in Texas and Okiahoma. The weather is generally warmer in the central and eastern portion of the country, but is cooler in the west, and conditions are favorable for continued cool and showery weather throughout the central valleys tonight and Sunday. OMAHA, May 27, 1906.

c The cow and helfer market has suffered to about the same extent as steers and show about the same decline. Good helfers possibly are not as low as this, but the general market is fully 15@25c lower for the week. There has been a fair supply here and trading on most days was more active than on steers, but with prices at the decline noted above.

Euils, veal calves and stags show about the same decline as other estile and are 15@25c lower for the week.

There was an unusually light offering of stockers and feeders this week, and it is on this account that the market has held its own. There was a good demand for the cattle, and as the receipts were light, buyers picked them up at right around

buyers picked them up at right around steady prices all week. Some heavy cattle may look a little lower, but the general market ruled steady.

270 40 3 37% 80 285 ... 6 25 SHEEP—There were no fresh arrivals here today and practically no market. Receipts for the week show an increase as compared with last week of \$800 head and an increase of 15,157 head over the corresponding week of last year. The bulk of the receipts has been lambs, both here and at other points. This increased supply of young stuff caused buyers to pound the market. Monday's market was in good shape, but on Tuesday there was a break and the market on lambs for the week shows a decline of 250,400. Trading on most days was slow, although about everything was bought up. Sheep no not show as much decline as lambs and the supply has not been heavy. The market on this class of stuft has been fairly active all the week, although buyers forced a decline of from logists and the market for the week shows just about this much loss. SHEEP-There were no fresh arrivals 10@Bbc and the market for the week shows just about this much loss.

 Wool Market.

BOSTON, May 27.—WOOL—The Commercial Bulletini today says of the wool market: Speculation among dealers has practically ceased, while there has been more buying for consumption. Foreign crossbreds have moved well and the new territories have been taken up on arrival, with many clips sold to arrive. The finer grades of pulled wools have sold well and stocks are rapidly diminishing, the western states are about cleaned up and the fleece sections are excited, with extravagant prices being demanded. The foreign markets are strong and advancing. The shipments of wool from Boston to date from December 29, 1994, according to the same authority are 101,159,217 pounds, against 88,421,681 pounds at the same time last year. The receipts to date are 117,578,568 pounds, against 83,278,596 for the same period last year.

against \$5,273,696 for the same period last year.
LONDON May 27.—WOOL—The arrivals of wool for the fourth series of auction sales amounts to \$1,21 bales, including \$3,500 bales, forwarded direct to spinners. The imports this week were: New South Wales, 1,741 bales; Queensland, 117 bales; Victoria, 1,330 bales; South Australia, 256 bales; Tasmania, 128 bales; New Zealand, 1,768 bales; Cape of Good Hope and Natal, 4,060 bales; Pinta Arenas, 647 bales; various, 1,020 bales.
ST. LOUIS, May 27.—WOOL—Firm; medium grades, combing and clothing, 260 allege; tub washed, 326424c.

Cotton Market. Cotton Market.
