Boss of the Establishment

He Reveals the Secret of Man's Mastery Over Women.

BY AMERE MAN. The Boss of the Establishment, absorbed in his favorite sporting page, was scarcely more conscious of the presence of his wife than he was of the subdued ticking of the French clock in the mantelpiece.

MEN ARE THE EASIEST THINGS IN THE WORLD TO MANAGE.

"What's the matter?" inquired the startled Boss. "There's something so funny in the paper! Oh, so awfully funny!" his wife explained. "It's about a married couple that went to court to ask the judge to divide which was the boss. And the judge told them they should take turns—the man giving orders for the first six months and then the woman having her chance for the same time."

on earth out of your hand than it does to induce a 4-year-old baby girl to swallow her annual! Any woman who manages little children, as you know, tell you that their own greatest talent—can boss any man alive with her eyes shut!

"That's silly enough," returned the Boss ungraciously, "but I fall to see any particular humor in it." "Of course, that's not the funny part," the spouse retorted. "It's what the judge said, 'My darling.' He said if they never came back he'd know the husband had decided to let his wife boss all the time and they would live happy ever after."

"Well," said the Boss, with exasperating tolerance, "if it makes you feel any better, think so, I don't care. But there isn't a woman alive that could make me do anything I don't want to do. Why, I couldn't care very much for a woman unless I could boss her!"

To Keep Rooms Cool in Summer Close Windows and Shut Out Air

Whether you live in town or country, shut your house through the day as soon as hot weather begins, says an office housekeeper, and the theory and practice are excellent. For in the early morning the air is cool after the night, if the windows have been wide open since sundown the day before, and so the house is fresh and the cool air should be kept in, capturing the heat, which comes quickly from pavements or roads.

quarter open. A long hook, going from the window sill to the bottom of the blind, is required to prevent the wind from blowing in both flat. In this way the sun is kept out and a draught is created. Windows and blinds in the country may be open just as soon as the sun goes down, because foliage does not hold heat, and when the sun goes none is left. But in cities pavements and buildings throw off heat in the evening hours after sundown, and so it is well to delay opening the windows, etc., until dark.

When Nelson was still a lad he sailed as coxswain with Captain Ludwidge on an expedition to the North sea. He was then very fat, but so fat of courage and daring that it was difficult to restrain him. One night during midwatch, when the ship was embedded in an ice floe, he and a favorite companion stole away to kill a bear. Armed only with a rusty musket, Nelson scrambled, dappled over yawning ice chasms, and in his courageous companion with jokes and laughter. They were soon missed from the ship, and, as a thick fog had come on, the captain was anxious. About 3 o'clock in the morning it cleared a little and the adventurers were seen through the ship's glasses to be attacking a large bear. Nelson's musket flashed in the pan and his ammunition was exhausted, but he was not daunted.

The Tired Business Man Tells Friend Wife the Committee Reported It Spent the Money.

BY WALTER A. SINCLAIR. "What do you make out of that senate committee which investigated the causes of the increased cost of living reported?" asked Friend Wife. "They reported that they had spent the \$25,000," answered the Tired Business Man. "Oh, that was easy! Ask me something hard," I say, "that it was very slubby and high-minded of those senators to come to the surface at all long enough to gasp the awful news that they had blown the coin and were now ready to go back to the people."

ized mass of people who insist on eating three times a day. So have I. 'We brush elbows with the guilty parties every day. Some of us who assist in barber shops and boot shineries not only brush elbows, but also brush lightly at backs and collars in hopes of tips. But I disagree. It would take no Sherlock Omeuroun Holmes to sleuth on the ones who are responsible for the increased cost of living. Why, even the price of pressing trousers increases right along. They are the great American public who like to eat when they are hungry, like to wear clothes when they get ragged, and occasionally like to go home, although this does not apply to married men.

"If there had only been some report hurried back during those exciting days of the boycott, when we were refusing to 'meat at the beautiful shore dinner!' But no, they slipped it to a senate committee, everybody said 'Good night' and by the time they bobbed up we had 80 many more interesting things to think about. 'You remember the enthusiasm that marked the day when those noble benighted patriots agreed to sacrifice themselves by getting into a bucket and going to the bottom of the well to find the truth. Bands played and women searched the cook book to find a recipe for fricasseed ood shlops. There is faint tinge of the rope became fainter and finally no bubble came to the surface, although it might come to the garage. About that time we got our minds off our stomachs by the record and neck breaking of the aviators, the juicy legislative scandals, the perambulations of the moving picture fighters, the beginning of the base ball season, the rumbling approach through Africa and Europe and finally the grand crash of the Big Noim. We had forgotten entirely about the intrepid investigators until they peered over the edge, pale and tired, but with wan smiles on their faces, for they had found the answer—a good one that nobody can understand. And I suppose the eminent Massachusetts senator will now retire to the woods, as the poem says. 'What poem?' demands Friend Wife, biting ashy.

Items of Interest to the Women Folk

Charming scarfs that will be a real protection can be made from wide printed fabric, and made in four yards are necessary. In making the material should be shirred across the width in groups of pin tucks until the goods is only half its width. These groups are set in at intervals, leaving flowing ends. Then the whole is lined with a soft, thin silk, the latter frilled to underlie the ends of the scarf. The edges should be finished with maribou. Though of fragile material, the construction of them results in a really practical and fairly substantial accessory. A new and attractive idea in many instances is the addition of braid or a fold to all edges of a coat that forms part of a suit fashioned from white serge displaying a colored pin stripe. Often a suit of such material is apt to lack character, and this the coat edging supplies. The color of the braid or mold is, of course, chosen to match the stripe in the serge. In the case of the suit being worn by a short or stout woman, it will be better to omit the trimming, using something definite in color for deep collar and cuffs instead for relief.

ordinarily encountered in the washing. Soap, too, if used for washing goods, is vicious to drying should be thoroughly rinsed out of the fabrics. The floating soaps are not satisfactory for cleansing garments before drying. The home-made dress form, fashioned from a cotton filling and a lining that fits, is a well-known device, but a great improvement, to my thinking, is the corset contrivance. To make this a success the corset is first adjusted carefully and accurately to the body, and then a lining is painstakingly fitted over it. The corset is then transferred to a bought jersey covered form and the waist lining stitched. Cotton is used between dummy form and corset as found necessary and padding is placed, if needed, above the bust line. The figure is thus ready to be fitted. A pretty, but inexpensive work basket for use on the veranda or for the bedroom is a specialty at an art store. The basket is open, nine inches in diameter, and is covered and lined with English chintz in a girly floral design, the foundation being light wood. Two handles of self material are attached to each side. The fittings include two spools of silk, two of cotton, a celluloid thimble, two bodkins in different sizes and a pair of embroidery scissors, all of which are held in with self material straps. Thus sewing may be placed in the basket and will not become entangled among threads. The price is \$1.50. Sensible girls whose position when married, will be well advised not to indulge in a long honeymoon. The ideal wedding tour should be short, quiet, and not expensive; it is foolish to tear hurriedly to rather backneyed French or Swiss resorts merely to say, "Oh, we went on the continent." There are many comfortable hosteries in the quiet spots where a young couple can enjoy each other's society undisturbed by the quizzing glances usually leveled at a nervous bride when she makes her appearance at a crowded table d'hôte, says Home Notes. A wise hostess said: "As to long honeymoons, they are a waste of money at a moment when every shilling is wanted for much more pressing objects; they are at a loss of time, which soon come to be dreary and weary. Six days, by all means, and then, oh, happy friends, go straight home; and the sooner you are at home the sooner you will find out what married happiness means."

RARE IN JUNE. "Have you any eggs you can sell me, madam?" "I'm sorry, sir; but I sold this week's egg this morning to the hotel!"

Things You Want to Know

Cost of the Celebration.

Today is the "danger mark" on the year's calendar for the American boy. For the one hundred and thirty-fourth time the signing of the Declaration of Independence will be celebrated, and ever since the youth of the country began to give expression to its patriotism the fourth of July has been a day of dread for parents. It is only within very recent years, however, that any active steps have been taken to check the exuberance of spirit which manifests itself with toy pistols, firecrackers, cannon and dynamites. The toll which the unsafe and unsafe Fourth has exacted from the millions of the land never has been computed, but it is safe to say that the total cost of the celebration in human blood, is so enormous as almost to discredit any person who would hazard a conservative estimate. The Washington Post declared recently that the number of dead and wounded as a result of the Fourth of July celebrations for the last seven years was more than thirty times as great as the number of Americans killed and wounded in seven battles of the revolutionary war: Lexington, Bunker Hill, Fort Mifflin, White Plains, Fort Washington, Monmouth and Cowpens.

Figures compiled by the Journal of the American Medical Association show much larger totals than those of the Tribune, largely because more time is taken in preparing them and many cases that are reported as injuries at the time are actually fatal. These figures show that in the last six years there have been 1,022 deaths and 27,860 serious injuries. Of course, the vast majority of these were children. Of 228 persons injured last year it was found that the following weapons shared the responsibility: Fireworks, 132; cannon, 27; firearms, 43; gunpowder, 43; torpedoes, 6; toy pistols, 46; bombones, 5; runaways, 14. While the toy pistol ranked fourth in the number of injuries caused, it leads the list by a wide margin in the fatalities. In fact, it is this implement of destruction which is the chief cause of the most serious fatalities. These figures show that in the last six years there have been 1,022 deaths and 27,860 serious injuries. Of course, the vast majority of these were children.
