YOU ARE AS OLD AS YOUR NERVES
All the functions and activities of the body are dependent upon the nerve-force. Your functional organs, your circulation and that elimination of wastes which keeps your body clean, are all dependent upon your nervous energies, and your nervous energies are primarily dependent upon the condition of your spine.

The first and most serious process indicative of old age is the deterioration of the spine. If you can keep your spine straight and strong and flexible, then you can maintain in perfect health and vigor the great central nervous system upon which the vitality and energy of the human body are dependent.

Keep the spinal vertebrae in alignment—less they impinge the spinal cord and spinal nerves. Keep the spine straight, as in youth. And keep the spine strong so that it may be kept straight and flexible.

The Wings of the Aeroplane
What is the New Romance to us groundlings, who crane our necks to watch the air feats?
There is the mystery of a new element, with adventure and discovery ahead; the white wings of the galleons of Columbus lend a similar magic to the imagination—
There is the vision of loveliness in light and distance and the beauty of the great bird monsters themselves, gripping the heart even as the triangle of wild geese in their flight—
And through all and above it all, there is the romance of power—the man-driven flight, with its young courage, its possibilities, its promises.
