Mr. Ford Owner, Listen

Seven Reasons Why You Should Have Your Cylinders Rebored and Fitted With Oversize Pistons

1. Removes and trues the walls of the cylinders and leaves them as smooth as a gun bore.
2. The pistons fit closer than in a new block.
3. Stops the loss of compression.
4. Stops the knock and vibration of the engine.
5. Gives the engine more power as the cylinders are larger.
6. Stops the carbonizing, as less lubricating oil is necessary.
7. A rebored block will wear longer than a new one due to the fact that the walls have been seasoned and hardened by the heating and cooling of the engine while in use.

We are fully equipped to rebore Ford Cylinders and to fit them with oversize pistons 4-7

BUT "OLD CROW" DID NOT ARRIVE
A traveling salesman visited Ogalala and vicinity a short time ago selling liquor for a firm in another state, at twelve quarts for ten dollars, money payable in advance. He sold and collected for over \$500.00 worth but now comes the real part of the story—no booze came to the ones who paid their good coin, and after investigations by some of the ones who bit, it develops that there is no such a firm in existence, or it can not be found which this man was supposed to be representing. Some of the boys who expected to fill "the cup that cheers" on Christmas day are mourning the loss of \$10, the purchase price of the "Old Crow."—Keith County News.
