

**Conservation** stands sentinel over the natural resources of our country, and forbids wanton destruction of forests, mines and animal life.

Conservation multiplies the by-products of industry, and changes waste into profit. It is conservation that turns rags into miladi's dainty note paper.

It is conservation that gathers together worn out garments, discarded sheets, carpets, and similar objects which have served their useful purposes. In the General's big roofing mills, these are macerated, saturated, sterilized and beaten into pulp, which finally comes out of the rollers in one continuous sheet of clean, strong roofing felt.

It is then thoroughly saturated with the General's own blend of soft asphalt and coated with a blend of harder asphalt, which keeps the inner saturation soft and prevents the drying-out process so destructive to the ordinary roofing. This explains why

## Certain-teed Roofing

out-lasts other roofing; also why the General can safely guarantee it for 5, 10 or 15 years, according to ply. Experience has proved that CERTAIN-TEED will out last the period of guarantee.

The General makes one third of all the rolls of roofing made in America. Because of this enormous production, and the economies due to cheap power, modern machinery and favorably located mills, the General is able to make the best roofing at the lowest cost.

CERTAIN-TEED is made in rolls; also in slate-surfaced shingles. There is a type of CERTAIN-TEED for every kind of building, with flat or pitched roofs, from the largest sky-scraper to the smallest residence or out-building.

CERTAIN-TEED is sold by responsible dealers all over the world, at reasonable prices. Investigate it before you decide on any type of roof.

footing was pretty good and as you know this is leap year Pete got home all right.

The box social and program, held at district No. 24 last Saturday was a success in every respect. The boxes sold for good prices. The receipts from the social was \$30.85. There will be added to the school a set of the new Practical Reference Library and also some pictures with the proceeds from the entertainment. The school house was crowded full and all spent an enjoyable evening.

## WESTERN NEBRASKA and COLORADO FARMS

are fast increasing in value. Their 1915 yield of from 25 to 45 bushels of wheat per acre will exceed the present price of similar and adjoining lands. Indication point to the greatest demand for these deeded Western lands that the West has yet seen. The incoming inquiries show already the movement to get hold of one of these farms before it is too late; if you can buy these lands at from \$15 to \$35 an acre you can make up your mind that they will be 50 per cent higher in the near future. Dairymen are making money. The silo has revolutionized farming on these lands and insures a return value that has never been known. All farm improvements on adjacent lands bear testimony to their worth. Yuma County Colorado, last year produced \$1,275,000 worth of wheat, \$600,000 worth of corn and \$1,280,000 worth of stock. This was about the production of other counties where these lands lie in Western Nebraska and Eastern Colorado.

Let me send you maps, folders, and place you in touch with land agents and otherwise help you. I am employed by the Burlington to do this.
