On the N. P. Nielson farm is the best wheat on route two. The reason for it seems to be, while Mr. Nielson was alive was a great believer in summer followed land and always had a field each year. It was not on level ground but very hilly and wheat grown on this same land will not produce more than ten bushels on an average each year.

The past week has been dry and windy. The ground is very dry on top. The subsoil is in good shape. Winter wheat has suffered bad on the upland. Some corn cannot even sprout until it rains. Some potatoes are up and others in the same field have not even sprouted. One inch of rain would put the ground in good shape. Old alfalfa is dried up in spots in the fields but with a good rain this crop would come right back as strong as ever. Most of the wild plums were killed by the frost.

Patrons on route two, nearly all of you have plum and cherry patches on your farms. Don't let the worms get all this fine fruit, when a few minutes work at different times would save them. Put a drop of coal oil in the top of the white nests that forms between the branches. The oil kills everything in the nest. Last year some orchards were completely covered with these white nests. Some of these trees never get over from the effects and some of them are killed right away. Even large trees fall in the wake of the worms. Another good way is to take a long pole drive a piece of small rod in the end then get a corn cob and push it on as far as you can then dip it in coal oil and touch a match to it and hold it under the nests a few seconds when all will be well with the worms.
