### The Value of Thrift

"To-day, with our national wealth approximating one hundred and eighty-seven billions and almost one hundred millions of people in the country, we have about four billion seven hundred millions in the savings banks, belonging to ten and a half million depositors. This may seem an amazing sum of capital and number of depositors, but when a comparison is made with other countries and a balance is struck, it is found that the United States is near the end of the list in the percentage of savers to population.

"With the frightful destruction and economic waste throughout Europe, it is evident that after the war these nations will need funds for reconstruction, and the United States will be called upon to supply them; that for some time to come this country will not be able to secure capital, as in the past, from Great Britain and France for the purpose of carrying on new enterprises. The United States must finance itself.
