PROCURES SHIRT FROM TREE

Native of New Granada Has Little Trouble Securing Garment Suitable for His Needs.

It is comforting at least to know that the sad "Song of the Shirt" does | Cochrane, two Philadelphia women. not apply to all parts of the world. In the forests of Oronoko, situated on the slope of New Granada, nature has consin provided what serves as a ready-made shirt for the natives. It is obtained was the first woman cab driver in from the marina tree, a species of tropical palm, which has a thin. fibrous red bark. When a native dogs, cats and birds. wants a shirt be simply cuts a piece of one of these trees about 18 inches women in the United States who could in diameter and takes off the bark be divorced, and during the past year managing so as not to cut it in any way, and thus obtains a hollow cylin- were mismated. der of flexible bark somewhat resembling a rough sack without any bottom. He then makes a small slit the age of seventy-three. With the n each side for his arms to go through and puts it on. It is only during the rainy season, however, that her. natives conform to the requirements of civilization sufficiently to wear garments of any description.

"CASCARETS" FOR

For sick headache, bad breath, that what they are thinking is some Sour Stomach and constipation.

Get a 10-cept box now,

No odds how bad your liver, stomach or bowels; how much your head aches, how miserable and uncomfortable you are from constinution, indigestion, billiousness and sluggish bowels -you always get the desired results with Cascarets.

Don't let your stomach, liver and howels make you miserable. Take Cascarets to-night; put an end to the headache, billiousness, dizziness, nervousness, sick, sour, gassy stomach, backache and all other distress; cleanse your inside organs of all the bile, gases and constipated matter which is producing the misery.

A 16-cent box means health, happiness and a clear head for months. No more days of gloom and distress if you will take a Cascaret now and then. All stores sell Cascarets. Don't forget the children-their little insides need a cleansing, too. Adv.

HAT night Nancy returned from the office to find her brother's home. which she shared. full of St. Valentine sentiment. Alian had brought Maude a bracelet and theater tickets Helen, her sister of eighteen, was blushing and bliss-

ful over Jack Harlan's extravagance in violets; even Baby May had come from the kindergarten with her fat hands full of lacepaper hearts. And it was the maid's afternoon off, so Maude asked Nancy if she would mind washing the dinner things. And would she be lonely if they all went out and left her with May, already asleep?

Nancy did not mind the dishes or being alone-she saw too many people downtown to want them at night. She thought of her unfinished book and a quiet place by the sitting room fire. However, as she buttoned Maude's theater waist up the back, and later helped Helen pin her mass of violets to her white party dress, and saw them all off, she felt alone-the odd one. She had caught a glimpse of her rather worn face in the glass over Maude's shoulder, and missing its fine strength, saw only the record of twenty-nine years in it. What had been ailing her lately?

With her characteristic refusal to procrastinate, she sat down in the dusk to think it out. She was not going to permit herself to grow into a state of discontent or unhappiness. Certainly every one was kind to her cently appointed a board of women to at home—and in the office. assume direct control of one of the

Suddenly she frowned. Perhaps she most important reformatory instituwas letting Flossie, the new stenographer, get on her nerves. The girl,

The vioyet Nancy knew that strong men. past their first youth, were prone to ought to be, and, indeed, will be, as make just such a mistake. soon as they all begin to think as we

She shook herself free of the out a lean tongue for it. thought and returned to herself. The plain fact was that her business gave her little time to cultivate her old would let her go. They stood a long friends, mostly married now and epgaged in their own affairs. Her brother was wrapped up in his business and family. She, Nancy, was too much alone growing too introspective. She was losing her individuality and independence, and needed to take more care of herself, mentally and physically.

Still in her black office dress, with Its white collar and cuffs, she stretched out a little in the big chair by the fireplace where the fire was low, and, not wanting the lights, sat thinking She put up her hands in a fashion of her childhood and rumpled her heavy brown hair, usually so trim; her sweet, steady gray eyes filled with tears, which she promptly suppressed. Self-pity, she thought, was the last straw of humiliation! Why should she be sorry for herself? If the office irked her, why not take a rest? Her grandmother had, with the year past, left her a little money. She would resign Why had she not thought of it before? Flossie could take her place, and she would travel and find broader interests.

Then it came upon her how much John Steele had been in her mind, and she fought it out with herself on the spot. She would not, simply because she was lonely, let herself fall in love with the only attractive man near her own age whom she saw much of-and her employer, at that. That was too banal! What would he say when-she resigned? Would he care? He was not so foolish! No: he had showed her every courtesy in the office-the same courtesy he showed to all women, but never the little light attentions he showed even to Flossic. to whom, that very morning, he had, on entering, tossed a smile and a rose as one would a ball to a kitten

The girl was so soft and prettyhe could not be blamed. But she, Nancy, would straightway resign before she made a fool of herself. It was high time.

It had grown dark in the room, and she was still lost in planning for the and forgot all about Flossie. coming year when the doorbell roused her. Flushed and startled, not stopping even to smooth her hair, she went into the hall, where the light burned low. She opened the door. quite cheerfully as long as we know She did not realize that it was John we're at liberty to stay out all night .-Steele till he asked, with an attempt | Exchange

"See-violets! The thought of you FEW PRINCIPLES TREATMENT FOR OF BEE-KEEPING

heart surrounded with doves and Essence of All Profitable Work Is To Eradicate Disease, Affected to Keep the Colonies Strong and Vigorous.

> The importance of scientific apiculture is being slowly but surely recognized. With a wider knowledge of the part bees play in the pollination of fruit blossoms and the spread of rural education generally, bee-keeping cannot any longer be regarded as merely a hobby, but as one of the most important of the minor branches of the science of agriculture.

> Although conditions differ, the principles of bee-keeping are the same the world over. The following axioms should be noted:

1. Bees gorged with boney never volunteer an attack.

2. Bees may always be made peaceable by inducing them to accept liquid sweets.

3. Rees when frightened by smoke fill themselves with honey and lose all disposition to sting, unless they are hurt.

4. Bees dislike any quick movements about their hive, especially any motion which jars their combs.

5. In districts where forage is abundant only for a short period, the largest vield of honey will be secured by a very moderate increase of colonies.

6. A moderate increase in colonies in any one season will, in the long run prove to be the easiest, safest and cheapest mode of managing bees.

7. A queenless colony, unless supplied with a queen, will inevitably dwindle away or be destroyed by the wax moth or by robber bees.

8. The formation of new colonies should ordinarily be confined to the season when bees are accumulating honey, and if this or any other operation must be performed when forage is scarce the greatest precautions should be used to prevent robbing.

The essence of all profitable beekeeping is contained in the one golden rule: "Keep the colonies strong." If anyone cannot succeed in doing this down to talk about it-so many things the more money he invests in bees the heavier will be his losses, while if his colonies are strong he will prove a he finished presently, "that gave me bee-master as well as a bee-keeper, courage. GAPES IN CHICKS

Birds Should Be Isolated-Burn All Dead Fowls.

(By H. L. KEMPSTER, Missour! Experi-

Gapes is a disease affecting certain birds, fowls, and particularly chicks one to four weeks old. It is caused by which attaches itself to the windpipe of its victim.

The symtoms are frequent gaping, sneezing, a whistling cough, with discharge of mucus and worms, dumpishness, weakness and dropping of wings. Dead birds will show forked worms attached to the windpipe.

The adult female gape worm is much larger than the male, her body being filled with eggs and embryos. These embroys appear in the droppings or are coughed up. So the trouble is spread by contamination of runs, feed and drinking water. Embreyos are often found in earthworms.

To eradicate the disease, isolate affected birds, treat drinking water with potassium permanganate; burn dead birds and remove chicks to fresh ground which is not infected. Cultivation of infected ground is said to eradicate the worms in three years.

Individual cases may be treated in one of three ways:

By confining the chick for a short time in a box which has air-slaked lime on the floor. The lime is said to cause the worm to release its grip and the

chick to sneeze it out. Stripping a feather, leaving a small tuft, moistening with turpentine and introducing into the windpipe, care being taken not to lacerate the windripe or suffocate the chick.

Two horse hairs tied together, the knot trimmed, run down the chicken's throat and removing in a twisting manner will also remove the worms. Gape worm extractors are also on the market.

Disposal of Manure. The most important part of the stable sanitation from the other fellow's standpoint is the disposal of manure.

The liquid manure should be ab sorbed by the bedding and the bedding changed every day. The solid manure should be cleaned up morning and evening and "rown in a flyproof box or vault. If possible, have it hauled away daily.

Rye Meal for Cows. The Pennsylvania experiment station has found that rye meal as a

part of properly balanced ration for dairy cows is sufficient in milk and butter production to an equal weight of corn meal
