- Q. What is the beginning of sickness?
- Constipation. What is Constipation? A. Failure of the bowels to carry off the waste matter which lies in the alimentary canal where it decays and poisons the entire system. Eventually the results are death under the name of some other disease. Note the death from typhoid fever and appendicitis, stomac; and bowel trouble at the present time.
- Q. What causes Constipation? A. Neglect to respond to the call of nature promptly. Lack of exercise. Excessive brain work. Mental emotion and improper diet.

A. Constipation causes more suffering than any other disease. It causes rheumatism, colds, fevers, stomach, bowel, kidney, lung and heart troubles, etc. It is the one disease that starss all others. Indigestion, dyspepsia, diarrhea, loss of sleep and strength are its symptoms—piles, appendictis and fistula, are caused by Constipation. Its consequences are known to all physicians, but few sufferers realize their condition until it is too late. Women become confirmed invalids as a result of Constipation.

Q. Do physicians recognize this? A. Yes. The first question your doctor asks you is "are you constipated?" That is the secret.

Q. Can'it be cured?

A. Yes, with proper treatment. The common error is to resort to physics such as pills, salts, mineral water, castor oll, injections, etc., every one of which is injurious. They weaken and increase the malady. You know this by your own experience.

Q. What then should be done to cure it? A. Get a bottle of Mull's Grape Tonic at once.
Mull's Grape Tonic will positively cure Constipation and Stomach Trouble in the shortest
space of time. No other remedy has before been
known to cure Constipation positively and permanently.

Q. What is Mull's Grape Tonic?

A. It is a Compound with 40 per cent of the juice of Concord Grapes. It exerts a peculiar strengthening, healing influence upon the intestines, so that they can do their work unaided. The process is gradual but sure. It is not a physic, but it cures Constipation, Dysentery, Stomach and Bowel Trouble. Having a rich, fruity grape flavor, it is pleasant to take, As a tonic it is unequalled, insuring the system against disease. It strengthens and builds up tonic it is unequalled, insuring the system against disease. It strengthens and builds up Q. Where can Mull's Grape Tonic be had?

A. Your druggist sells it. The dollar bottle contains nearly three times the 50-cent size. Good for Ailing Children and Nursing Mothers.

124 FREE BOTTLE. Send this coupon with your name and ad-dress and your druggist's name, for a free bottle of Mull's Grape Tonic for Stomach and Bowels, to

MULL'S GRAPE TONIC CO.,

Give Pull Address and Write Plainly. The \$1.00 bottle contains nearly three times the 50c size. At drug stores.

The genuine has a date and number stamped on the label—take no other from your druggist.

LAW URGED BY SELF-SEEKERS.

Real Animus of Movement Against

Remedies Deservedly Popular. An adroit but plausible scheme by which it is hoped to prejudice the sale of proprietary medicines is the proposi & n to prohibit the sale of any remedy which "contains poison" unless each package or bottle is expressly labeled "Poison." Such bills are also well designed to impose upon men who have no familiarity with the subject matter. The pretense of protecting the public health put forth in support of such bills is generally the merest Q. What are the results of neglected Conril- subterfuge; and whenever you hear a demand for a law of this kind it of that animal for the parasites is not originates with those who have a great task; but it is far different a direct pecuniary interest to serve by destroying the sale of proprietary rem-

edies. Some of the best and most widely used remedies in the world contain some one ingredient which, if taken in sufficient quantities, might be poisonous, and yet the preparation as a whole is not poisonous at all. Opium. for instance, is used in small quantities in many of the best cures for coughs, coilc, diarrhea, etc., in toothache drops and in almost all liniments. To require such medicines to be falsely labeled "poison" would be merely a cunning device to alarm the public and thus bring about the destruction of the sale of those remedies, and indirectly to compel people to procure the medicine they want by the more expensive method of consulting a physician and getting his prescription. In other words, it is an effort to prevent them from getting cheaply the remedies which they and their fathers before them have used for many years .-Medical exchange.

HEALTHY CHILDREN.

Without good health life is not worth living. Sickly, peevish children are a source of endless trouble A free bottle to all who have never used is and anxiety to their parents, yet the because we know it will cure you. to their parents' ignorance or thoughtlessness, or both.

To make children healthy and to keep them in that condition it is necessary to feed them proper food and to see that they get plenty of exercise and fresh air. Meat is very bad for children. It should be avoided and food rich in phosphates, such as Pillsbury's Vitos, should be given in

This food is truly the "meat of the wheat." It is made by the world's greatest millers and it is free from artificial coloring or adulteration. It is not especially a child's food. Your whole family will enjoy this common sense cereal. It makes a wholesome, substantial breakfast or an appetizing dessert and can be prepared in one hundred different ways.

Every good grocer will supply you with Pillsbury's Vitos. Large package-enough to make twelve pounds of strength-building food, 15c, Rocky Mountain Territory, 20c. Ask your grocer about it to-day.

Cactus Blossoms.

The cactus is coming into fashion in England and Germany. A German writer maintains that cactus blossoms excel all others in variety and in beauty of form and color.

Every housekeeper should know that if they will buy Defiance Cold *3.50 & *3.00 SHOES FOR Water Starch for laundry use they will save not only time, because it . Douglas \$4.00 Cilt Edge Line never sticks to the iron, but because each package contains 16 oz .- one full pound-while all other Cold Water Starches are put up in %-pound packages, and the price is the same, 10 cents. Then again because Defiance Starch is free from all injurious chemicals. If your grocer tries to sell you a 12-oz. package it is because he has a stock on hand which he wishes to dispose of before he puts in Defiance. He knows that Defiance Starch has printed on every package in large letters and figures "16 ozs." Demand Defiance and save much time and money and the annovance of the iron stick-

ing. Defiance never sticks. Business in Lhassa. Lhassa, the Forbidden City of Thibet, has ten thousand people, two-thirds of whom are women, who conduct all the business of the city.

To the housewife who has not yet become acquainted with the new things of everyday use in the market, and who is reasonably satisfied with the old, we would suggest that a trial of Defiance Cold water Starch be made at once. Not alone because it is guaranteed by the manufacturers to be superior to any other brand, but because each 10c package contains 16 czs., while all the other kinds contain but 12 ozs. It is safe to say that the lady who once uses Defiance Sarch will use no other. Quality and quantity must win.

Our worst enemies are the friends who have failed to find us profitable.

Fowls are hard to protect from lice largely on account of the number of fowls that must be kept by any one man who expects to make much money out of them. If a thousand-pound steer or horse has lice the treatment if a thousand pounds of chickens have to be treated. That might mean, as many as 200 fowls to be washed, dipped, or otherwise handled and cared

There are several ways of killing lice, but the most thorough way is to wash the fowl with soap and water. A poultry exhibitor said to the writer, "If the man that has lousy hens will wash them as the showman does his birds he will have no trouble with lice, provided he does not again permit them to come into contact with other birds that are lousy." His method of washing was to make a strong lather of soap and water and scrub the birds thoroughly. The lather was worked into the feathers and under all of them and was again and again washed off. This kind of treatment gets rid of the lice and leaves the birds absolutely clean.

The next best thing is perhaps grease put under the wings, under the tail feathers, and on top of the head. Sooner or later the lice on the bird will take refuge in the places mentioned and will become covered with grease, which will in turn cause the stoppage of the breathing pores of the insects and hence strangulation. This is the current opinion, but whether all the lice do thus commit suicide is a queschildren's condition is frequently due tion that is hard to settle. Certain it is that the application of grease does greatly reduce the number of lice infesting the fowls.

Fattening Fowls. It is time to begin thinking of fattening fowls for the fall market and for the Thanksgiving table. When we are getting them ready for market we give them a thorough cleaning, to get rid of all vermin, and then confine where they will have plenty of fresh air, but very little exercise. We pay special attention to see that they are kept free from vermin now, for they have not a fair chance to look out for themselves when confined. Pure air in great abundance is very essential, but exercise will work off the flesh you are trying to lay on them. Corn is one of our best fattening foods, with some oats and buckwheat. A variety in the food tempts their appetite and gives better results. During the last ten days we feed nothing but soft foods and these we feed in great quantities. In confining the fowls for fattening, we separate the cocks and hens, and in case any individual fowl is inclined to be "scrappy" and persists in bothering his neighbors and worrying himself about them, we put him in a coop by himself. Anything which tends to worry the fowls or to work off flesh must be watched for and avoided .- Cora H. Porter, Grant Co., Ind., in Farmers' Review.

Cost of Raising Fowls.

estimate, because the farmer feeds his fowls with material that would be wasted if he did not give it to the poultry. Where men live in the villages and keep poultry, they roughly estimate that it costs one dollar per head to raise a chick and bring it to the laying period. This is about the cost estimated to keep a fowl a year. In making the estimate of one dollar per fowl, one might say that the estimate is too large, but it must be remembered that when the chickens are growing there are invariably losses. and these must be averaged up as part of the cost of raising the ones that survive. It is not a hard matter to make a fowl, after she has begun laying, produce a dollar's worth of eggs a year, or even half a dollar more than that. We doubt if the cost of raising a fowl on the farm is more than a half dollar, and our farm fowls, if rightly handled, should in a year pay for themselves, and pay an extra dollar in the way of profit. We are certain that on many farms they do this, but the owner does not appreciate this because he keeps no account either of receipts or expenditures. More care in the raising of poultry will reduce the cost per head .- Warren Wilson, Union Co., O.

The Marketing of Chickens.

The marketing of chickens requires that all the best methods should be observed, if profit is to be expected from the consignments. It is surprising how much weight people put upon the appearance that goes with any food product. Some commission men. too. make it a point to deduct from the price if the package is not up-to-date in appearances, declaring that they are unable to sell at a certain figure on account of poor appearance of the chickens or the package in which they were sent forward. Sometimes this is based on actual facts. It is often the case that the men that report that they have not been able to make sales at going prices have really repacked the chickens and sold them at the market price for the best goods, but they do not care to give the result of their work to the original consigner. Perhaps they are not to be blamed. Certain it is that the man or woman that goes into the production of poultry with the expectation of making money out of it will have to accept conditions as they are and try to conform to the requirements of the mar-

Meat Cracklings for Fowls. The butchers take the fattest parts animals, especially hogs, boil them to get and out of them. After the fat fat is taken out the remainder goes under the name of cracklings. How much value these have as a poultry feed it is hard to tell. It is doubtful, however, if they are worth paying a very high price for, as fat seems to be their principal component.

The permanent pasture may be made one of the most profitable pieces of land on the farm.

farms are as expert as the men. Nomenclature of Apples

Many a man tries to make himself familiar with the apples that are grown in this country. The skilled horticulturist feels a pride in recognizonly certain monthly regulator. Cures female weaknesses, Backache, Kidney and Urinary troubles. At all Druggists or by mall 50 cts. Sample mailed FREE. Address, The Mother Gray Co., LeRoy, N. Y. ing the different varieties of apples at sight, and this is pardonable, for it is one of the things the public supposes him to know. It is always a humiliation to him to be unable to tell the name of an apple that is brought to him or to misname it. But those that have made a careful investigation of companied by a friend. As they the matter have come to the conclusion that no matter how much a man ing. The friend excitedly exclaimed. may study apples, it is practically impossible for him to know all the varieties so well that he can tell each one at sight and not make a mistake. There are over 2,000 varieties in general cultivation at the present time. may be sure he is afraid to keep it until his stock of 12 oz. packages are It would be a difficult task to learn the names of these and their descrip-

But what is worse, these apples have among them over 14,000 names, as W. H. Ragan of the United States Department of Agriculture assured the writer. Mr. Ragan is the author of a large bulletin that has recently been issued by the government on this matter. Mr. Ragan is the government expert on pomological nomenclature, and we doubt if any man in the country has put as many years of work on this subject as has he. Yet we doubt very much if even Mr. Ragan would be able to recognize some of the old varieties that appear at our fairs and winter horticultural meetings. If an apple always held its form and color it would be different, but the forms and colors change in accordance with varying conditions

One of the best known growers of apples in Illinois was showing the writer through his orchard when he came to a Wealthy tree that hore exceptionally large apples. The fruit looked much more like the Wolf River than like the Wealthy, yet there was no doubt about them being Wealthies. Mr. Soverhill said that for some time after the tree came into bearing he held to the belief that the tree was the Wolf River. This illustrates the way in which fruits change under varying conditions. Mr. Soverhill also related a little incident that occurred several years ago. There was a dispute among some fruit judges at a fair as to certain plates that were supposed to be Wealthies. They were in fact Wealthies, but the best judges did not believe some of them to be so. Mr. Soverhill picked apples from three parts of the same Wealthy tree and brought them to the judges. Some had grown in open sunshine, some in the shade and others varied in size. He asked the experts to name the apples, and they promptly gave them three different names. He surprised them by telling them that the apples were all taken from the same tree and that it was a Wealthy.

The man that tries to learn all about apples is engaged in a laudible undertaking, but he has taken upon himself a task without end, especially so as new varieties are being continually brought out by nurserymen as well as by enthusiasts that are ambitious to make a record as originators of popu-

Fortunes Lost by Forest Fires. J. H. Bissell of Michigan Academy of Sciences been making a close study of forestry in Michigan. What he says about forest fires should set every man to thinking. The lumber product of Michigan is of immense value. Mr. Bissell claims that the value of pine and hardwood lumber that has already been cut in that state amounts to \$2,649,175,000. In addition to this, since lumbering in the state began, forest fires have de stroyed pine and hardwood to the value of \$859,000,000. This is a sum about equal to our national debt. It is a loss sustained in a single state of the union. Is it any wonder, therefore, that students of public economics are asking our legislators everywhere to pass laws that will prevent forest fires?

Plum Seedlings. Frederic Cranefield of Wisconsin

says that 90 per cent of the seedlings of any variety of plums will fruit earlier than the parent. The best varieties produce the best seedlings, but show a great difference in the uniformity of their seedlings, or in their varietal differences. Thus the seedlings from the Quaker differ but little from their parent, while the seedlings from the Wild Goose show a multitude of types.

Get Ready to Graft. At this time of year the farmer should select the trees that he wishes to propagate on his trees of less useful variety. The grafting will not be done until spring, but now the wood that is to be used for the grafting should be marked, that it may be cut and laid away after the leaves have fallen. Why do we allow our trees to produce inferior fruits when we can so readily control the matter by grafting?

Pruning and Size of Fruit. An Australian orchardist last year pruned seven varieties apple trees with the idea of affecting the fruit. The average diameter of the seven varieties of apples from the unpruned trees was 1.5 inches, while from pruned trees in the same vicinity the average diameter was 3 inches.

Skim Milk and Water. the feeding of skim milk to fowls, it should be remembered that it is a food rather than a drink. It should not be allowed to take the place of water. While it is composed largely of water, yet its combination as a food makes the system crave pure water to satisfy the thirst.
