LONG YEARS AT REST

BODY OF ANCIENT EGYPTIAN MANY CENTURIES OLD.

Remains of Prehistoric Man, Who Must Have Lived Ages Before Christ, Have Finally Found Place in British Museum.

The oldest known body of any hu-

man being reposes in the Egyptian gallery of the British museum. All that is known concerning it is taken from the inscription which was found on the case containing the mummy. This says: "Body of a man who was buried in a shallow grave hollowed ized this, the dressmaker's bill might out of the sandstone in the west bank be heavier, but serenity would reign of the Nile in upper Egypt. Before in the household, and many would burial the body was treated with a gladly pay the price. preparation of bitumen and was arranged in the posture in which it now lies, on its left side, with the hands before the face and the knees drawn up nearly on a level with the chin. grees as at 32, and four times as great The grave, which has been roughly at 78 degrees as at the freezing point imitated by the model here exhibited, of water-32 degrees Fahrenheit. was covered with the slabs of unworked stone, and in it, beside the body, were disposed flint knives and a number of vases, partly filled with the remains of funeral offerings. The man probably belonged to a fair skinned, light haired race, which may be regarded as one of the aboriginal stocks of Egypt, whose settlements were usually found on the west bank of the Nile. The style of the flint instruments found in the grave indicates that the man lived in the later neolithic period of Egypt; that is, in remote ages, long before the rule of Menes, the first historical king of Egypt."

A wandering Arab was the first one to see this grave and he reported his find to a British official, who immediately sent a couple of soldlers to guard it day and night. The body is not a mummy of the ordinary historic Egyptian period, such as Rameses, the father of the Pharaoh of the Exodus. It was never bound up in linen or cased in a painted coffin, but was merely coated with a preparation of bitumen, called by the Arabic word mumia, hence our word mummy. This man must have hunted along

the banks of the Nile before the time

of the earliest mummied king which the museums possess-before the time of Menes, who was supposed to have ruled Egypt about 5004 B. C. There were previous to that time two prehistoric races, one the conquerors and the other the conquered, from which sprang the Egyptian race of the earliest dynasties. It is with these remote stocks that this man has to do. Considering the condition in which he was found it is evident that he was associated with a late period of the new stone age of Egypt. He was buried in a characteristically neolithic noble, but made him so .- Seneca. grave and has neolithic pots and instruments of flint about him. They are like all other neolithic pots and chipped flint weapons and knives found in other parts of the world. The fine, thin flint knives were placed in the grave as a part of the funeral ritual. They should be compared with Egyptian flints of a known historic age, and they will be found to be almost identical with them. There is, of course, no inscription of any kind on the pots, knives or graves, all having been made long before the invention of any written language. Certain Egyptian documents of great antiquity mention a race called the Trennennu, who had red hair and blue eyes. This man has hair of a distinct auburn shade.

A glance at the published ingredients on each bottle wrapper, will show that it is made wholly from native, American, medicinal roots, that it contains no poisonous or habit-forming drugs, no narcotics and no alcohol—pure, triple-refined glycerine, of proper strength being used instead of the commonly employed alcohol, both for extracting and preserving the active medicinal properties found in the roots of the American forest plants employed. It is the only medicine for women's pecular diseases, sold by druggists, that does not contain a large percentage of alcohol, which is in the long run so harmful to woman's delicate, nervous system. Now, glycerine is perfectly harmless, and serves a valuable purpose by possessing intrinsic value all its own, and besides it enhances the curative effect of the other ingredients entering into the "Favorite Prescription". Some of the ablest medical writers and teachers endorse these views and praise all the several ingredients of which "Favorite Prescription" is composed—recommending them for the cure of the very same diseases for which this world-famed medicine is advised.
