

Making the Fur Seal Abundant

by Hugh M. Smith
United States Deputy
Commissioner of
Fisheries

THE fifteenth of December, 1911, was the time set for the formal adoption of one of the most important international conservation measures that has ever been effected. Pursuant to a convention or treaty concluded at Washington on July 7, 1911, by the United States, Great Britain, Russia, and Japan, the fur seals of the north Pacific Ocean will receive for the first time a form of protection that has been shown to be absolutely necessary, and is guaranteed by these four great powers for a term of 15 years.

The agreement prohibits absolutely pelagic sealing, or the killing of fur seals while in the water, and places the legitimate killing of surplus male seals on land under the direct control of the governments interested.

This convention insures the rescue of the depleted fur seal herds from commercial extinction; prohibits the citizens or subjects of the contracting powers from engaging in a wasteful, cruel occupation, and removes a long-standing disturbance of international goodwill.

Fur seals inhabit certain parts of both the northern and southern hemispheres, but the most important herds live in the north Pacific, represent three distinct but closely related species, and are known as the Alaskan, Russian and Japanese fur seals, respectively. Although the northern seals roam widely on the high seas, they always resort for breeding purposes to certain definite bits of land, and it is this habit which gives particular nations property rights in them and has created several international complications.

The Japanese seals visit no land except Robben Island and certain islands of the Kurile chain; the Russian seals never go to other shores than those of the Commander Islands, off the coast of Kamchatka; and the Alaskan seals, after distributing themselves over the eastern part of the Pacific Ocean as far south as southern California, make an annual pilgrimage to islands in Bering Sea.

Of all the fur seals, the most numerous and important are those of Alaska, which came to the United States with all the other resources of the territory when Russia ceded her jurisdiction. The Alaskan fur seals have for many years been the subject of protracted national and international discussion, and during the years 1910 and 1911 came in for an unusual amount of attention. In addition to the consideration received during the diplomatic negotiations resulting in the treaty already mentioned, Congress has enacted a new law relating to the seal islands, a new dispensation has come in the administration of the islands, and the government as represented by the Bureau of Fisheries has for the first time engaged in the business of taking and marketing seal skins.

The "new dispensation" includes permanent scientific observation and control of the herd, discretionary authority to suspend all killing, and discretionary power to lease the sealing privileges or to exploit them as a government monopoly.

The only land to which the Alaskan fur seals ever resort is the group of small, rocky islands lying in Bering Sea 215 miles north of Unalaska Island, the nearest land. These bits of beach land have come to be popularly known as the Seal Islands, from their most conspicuous feature; but among geographers they are called the Pribilof Islands, in honor of the Russian navigator who, in 1786, while in the employ of a Kamchatkan trading company, followed the migrating seals and ascertained for the first time where they resorted.

At the time of the discovery of the Pribilofs there were no human inhabitants. As soon as the Russians began to take sea skins they transferred thereto from the Aleutian Islands a number of natives to do the manual labor, and from time to time established small colonies at various convenient points.

The present population numbers about 300 on the two islands. When the seal islands came into our custody the fur seals there constituted the most valuable aquatic resource that any government ever possessed. Owing to the immense body of animals present and the difficulty of counting with any degree of accuracy, estimates of the size of the herd at that time necessarily differ widely, the extremes being two million and seven million. It is safe to assume that the number was between two and a half and four million, distributed on 29 to 30 rookeries.

At the close of the season of 1911 the Alaskan seal herd consists of not more than 150,000 individuals of all ages.

This appalling dwindling of the herd has occasioned much concern and has subjected the government to much unfavorable criticism, because the government has exercised full and continuous control during all the intervening years up to the present date. It will be seen, however, that the criticism is not justified, for the herd came through causes operating when the seals were on the high seas and beyond the protecting care of their foster father.

It is furthermore a fact that the government took active steps to secure adequate protection for the seals when away from the Pribilofs, and that its efforts were frustrated chiefly by the results of an unfortunate international arbitration.

Although the seals are easily killed by the methods adopted by man for their destruction on sea and land, they are capable of withstanding great privation and of undergoing extraordinary muscular exertion.

To maintain themselves during winter in the tempestuous north Pacific without resorting to

ROOKERY ON ST. PAUL ISLAND

VIEW OF TWO HAREMS

COWS MILLED ON THE BEACH

land is in itself no small accomplishment for air-breathing animals. The females, leaving the islands in November, go further south than any other members of the herd, and in December appear off southern California, where they remain until March. They then begin their long return journey, reaching the islands early in June.

Within two days of their arrival on the rookeries the cows give birth to their pups. Not until ten or twelve days have elapsed do they return to the water or take any food. Then, after washing and playing near the islands, they make their first long trip to the feeding grounds, coming back to the rookeries after three or four days. Thereafter throughout the season the cows make regular feeding trips at intervals of five to ten days.

The seals subsist chiefly on squid, but also on herring, smelt, salmon, pollock, and other kinds of fish, which are caught and eaten in the water. They have prodigious appetites and gorge themselves whenever the opportunity comes.

On the approach of cold weather, the cows and pups leave the islands together. Up to that time the pups have subsisted solely on milk, and they then have to learn to catch their own food, consisting of fish and squid. Inasmuch as the natural mortality among the pups in their first year is fully 50 per cent, it is evident that they experience many vicissitudes in the tempestuous seas to which they commit themselves. The males follow shortly after, but some remain about the islands throughout the winter in mild seasons, and the natives always depend on seals for food in December and January.

Fur seals and hair seals have always been regarded as legitimate objects of exploitation, and all governments having real or assumed property rights in herds of seals have sanctioned their killing, under restriction, for fur, leather, oil, food, etc.

Beginning in 1786 and continuing until the sale of Alaska, Russians were almost continuously engaged in killing fur seals on the Pribilof Islands. In the earlier years there was a promiscuous scramble among rival companies, so that to maintain order and properly regulate the taking of seals the government was forced in 1799 to give the privilege to a single company, created by imperial decree and having among its shareholders members of the imperial family and the nobility. This association, known as the Russian-American company, enjoyed a monopoly of this business as long as Russia had control of Alaska. An ukase issued by Alexander I in 1821 for the regulation of the company had as one of its features the prohibition of foreign vessels within 100 miles of the Russian coasts and

islands. This ukase involved Russia in a dispute with the United States and Great Britain, resulting in the treaties of 1824 and 1825, which recognized Russia's claim to jurisdiction over the whole of Bering Sea, Okhotsk Sea, and other water inclosed by Russian territory.

From the outset the company placed a rational limit on the number of animals killed each year, and in the light of later experience it is evident that the herd would have been fully able to sustain the annual harvest of skins if these had been taken only from the males. But males and females alike were slaughtered in ignorance or disregard of the polygamous character of the seals, and as early as 1806 it was necessary to suspend operations for two years in order to permit the herd to recuperate.

When killing was resumed, however, it was along the same destructive lines, and the mighty fur-seal host continued to dwindle until by 1834 its numbers were reduced to one-fifth or one-twentieth of those present in the first years after the discovery of the islands. The suspension of all killing for a term of years then ensued, and by the time operations were resumed the company officials had come to realize that the females should be protected, and later the sacrifice of old bulls and young pups was stopped.

The result was a remarkable recuperation and increase in the herd that afforded a valid basis for the belief that speedy recovery of the decimated herds of Alaska, Russia, and Japan may follow the elimination of the factor responsible for their present condition, namely, the indiscriminate killing of males and females at sea. When Russia ceded her jurisdiction over Alaska, the Pribilof fur-seal herd had attained a degree of prosperity closely approaching its condition at the time of its discovery, and we thus came into possession of a resource but little impaired and had a knowledge of its significant history to guide us in its treatment.

It is a cause for congratulation that no country has dealt with its seal life in a more intelligent, humane, and zealous manner than the United States, and it was a cruel fate that for so many years rendered our efforts futile. The only occasion when there was any laxity in our administration of the seal islands was during the first years of our possession, when the government was still unorganized anywhere in the territory and various private companies landed parties on the Pribilofs and took seal skins without any government supervision or restriction. It was in that year that the largest killing in the history of the islands was made; the number of skins obtained was probably not less than 300,000, and may have reached 375,000; but this take was not indis-

A MOTHER SEAL AND HER NEW-BORN PUP

A MALE VIEW OF A SLEEPING BACHELOR

criminate, was confined to bachelors, and had no effect on the permanence of the herd.

Although the indiscriminate killing of seals in the sea had been going on from very early times, this business was not extensive, was conducted by natives using spears in their canoes, and had no appreciable effect on the herd.

Special inquiry made by the government showed that in different years from 70 to over 90 per cent of the seals killed at sea, either on the northwest coast or in Bering Sea, were females.

What pelagic hunting then meant to the seal herd when so large a fleet was engaged, and what it has meant recently when the fleet was larger in proportion to the number of seals, may be appreciated when it is stated (1) that for every seal killed and secured by the hunters not less than two seals were killed and lost because they sank before the hunters could lay hold of them, while many that were wounded and escaped died later; (2) that for every adult female killed on the way to the islands in spring an unborn pup was sacrificed; (3) that for every female killed after the herd had reached the islands a pup on shore was left to die a lingering death by starvation, and a pup to be born the next season was likewise sacrificed.

The government was not slow to realize the damage done to the seal herd by pelagic sealing, and was led to assume jurisdiction over the entire American side of Bering Sea and to regard as poachers any persons found hunting seals therein. The seizure of vessels flying the United States and British flags followed, and there arose a controversy with Great Britain, which culminated in the reference of the case to an international tribunal of arbitration that met in Paris in 1893. The award of the arbitration court was against the United States on both of the main contentions, namely, the Bering Sea is a closed sea, and that the property right in the seal herd warranted the government in protecting the seals while on the high seas.

Since the award of the Paris tribunal the case of the fur-seal herd has gone from bad to worse. The United States government early showed its good faith by prohibiting its citizens from engaging in the lucrative industry of pelagic sealing; but the subjects of all other countries were permitted to do so, and it was the injection of a new factor, Japan, that contributed more than any other cause to the decimation of our seal herd.

The fur-seal problem with which the United States government now has to deal presents several phases. The most important duty the responsible officials have to perform is to conserve and increase the seal herd. This involves continuous care, study, and observation; the determination of the actual condition and needs of the herd, and the application of the results of scientific and economic investigation to the welfare of the seals.

A scarcely less important duty, and one that is in no respect antagonistic to the first, is to provide a revenue and to utilize a highly useful resource at the time when that resource possesses the greatest market value. This involves the judicious killing of the male seals when they are two or three years old and the disposal of their pelts to the best advantage. A third duty is to ascertain what are the real needs of the helpless native inhabitants of the seal islands, and to give them the air that is best suited for their mental, moral and physical natures.

Recent criticism of the government's policy of taking the skins of seals in view of the depleted condition of the herd is based on deficient knowledge. The fur seal being a highly polygamous animal, and males and females being born in equal numbers, it follows that under the conditions that have prevailed and still continue the number of males produced is far in excess of the requirements of nature for the perpetuation of the species.

The preservation and increase of the seal herd is entirely compatible with judicious sacrifice of a limited number of young male seals each year, and this is quite as true when the herd is depleted as when the rookeries are crowded to their full capacity. When the presence of a sufficient reserve is determined by responsible officers of the government, the utilization of the surplus males for their pelts and incidentally for native food is justified and demanded by common sense, and fulfills the utmost demands of both the spirit and the letter of genuine conservation.

If not a single male seal were to be killed on the islands or at sea during the next five years, not a single additional seal would be produced as a result of that course. If not a single male seal were to be killed on the islands or at sea during the next 20 years, not a single seal would be added to the herd that will not be added if the present policy of restricted killing of surplus males is continued.

WHO WHO and Why

HELEN GOULD TO THE RESCUE

Miss Helen Gould, philanthropist, one of the best loved among American women and possessor of millions, has come forward to save the family fortunes from possible wreckage and to restore the prestige of the family name.

At the very moment when the financial downfall of the family is impending she has offered to cast her personal fortune into the breach to stay the threatened calamity.

In so doing she has chosen to forget and to forgive all that has occurred to alienate one member of the family from the others. She is inspired by her own bounty of heart and by the deep reverence in which she holds her father's memory.

Miss Gould left New York the other day in her private car for San Francisco, for it is there that the arrangements will be made by which the family finances will be straightened out. She is going to look over things for herself, and is accompanied by some prominent financiers.

She will see and study for the first time the great Gould properties that have their center in San Francisco. With her are a number of eastern financiers and railroad men, with whom she will advise.

On her trip to the coast Miss Helen Gould is accompanied by the men at the head of the Gould properties. In the party are B. F. Bush, president of the Missouri Pacific and the Denver & Rio Grande and future president of the Western Pacific; E. T. Jeffery, president of the Western Pacific, chairman of the financial board of the Rio Grande and chief financial adviser to the Goulds; Charles H. Schlacks, first vice-president of the Western Pacific and of the Denver & Rio Grande.

Until now Miss Gould has remained free of the financial enterprises in which her family has been involved. Her chief concern has been her philanthropic work.

When it looked as though the Missouri Pacific would be lost to George Gould, he was able to interest Speyer & Co., and they raised \$23,000,000 to put into the property. Then attention was turned to the Denver & Rio Grande. A system of financing has just been completed by which from \$10,000,000 to \$25,000,000 will be available.

The Western Pacific remains to be financed and it will be done through the assistance of Miss Gould. She has practically agreed to use her entire personal fortune, estimated at \$20,000,000, to help restore the family credit.

Miss Gould is credited with having said that she will give every cent, if necessary, to preserve the heritage that her father bequeathed them.

HEAD OF VERY SMARTEST SET

Sadness and gloom have been the portion of a large section of the American Society (be careful of the large S!), since the publication of that remarkable book "The 469 Ultra-Fashionables of America," compiled by Charles Wilbur de Lyon Nichols, on whose shoulders has fallen the mantle of Ward McAllister, inventor of New York's "400." The cream of the cream of American society have now been segregated, corralled, re-concentrated or otherwise abstracted from the common herd and seated on high in the splendor and dazzling radiance of Mr. de Lyon Nichols, august approval. There appears to be, however, a remarkable lack of invention displayed in the New York list of 300 notables. It is confined practically to the guests who were invited to meet the Connaughts and Princess Patricia on their recent visit. Surely New York is going to the dogs when it can only muster a beggarly 300.

Even Ward McAllister, in an earlier and less enlightened period, permitted the metropolis to have a sacred circle of 400. The reason may be that only the superfine ultra-fashionables are included in Beau Nichols' arbitrary selection, and that those unfortunates who are at all tainted with the stigma of slowness, who do not fully subscribe to the modern doctrine of "eat, drink and be merry, for tomorrow we die," are dropped relentlessly. Possibly the compiler's wisdom did not wholly desert him and he hesitated to embark on the stormy waters of the next stratum below, being assured of countenance and support by the precedent already established.

KING PETER IS IN TROUBLE

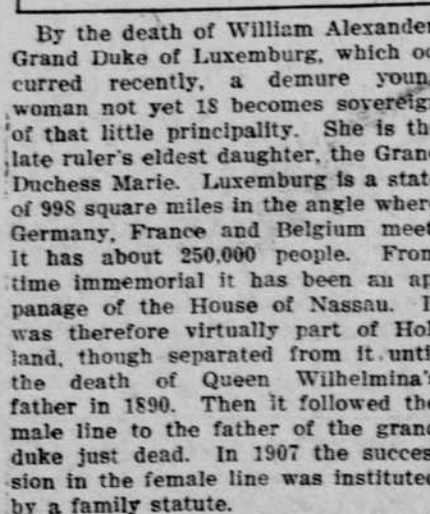

Is the bloody drama of 1903 about to be repeated in Belgrade? That is a question that all Europe, including Serbian people themselves, are asking. For weeks reports have emanated from Belgrade that a conspiracy has been formed among the officers of the army having for its purpose the dethronement of King Peter, if necessary, by as violent means as those of the terrible night nine years ago, when King Alexander and Queen Draga were murdered in the palace.

King Peter is paying for whatever guilty knowledge he may have had of the regicide plot with uneasy days and sleepless nights. Now in his sixty-eighth year, he is wondering if it is worth while after all, to trade his peace of mind as a private citizen in Switzerland, for the bloody crown of Serbia. Through the palace still stalks the restless ghost of Alexander and the king's ears must still resound the echo of the shrieks of Draga.

At the foreign office and in the war ministry all knowledge of plots and conspiracies are denied, of course. "It is a sensational newspaper lie," said one official, who was most anxious to leave the impression that the best relations existed between Peter and the army and Peter and his people. But talk in the cafes, converse with officers to whom you have been vouched for or ask any representative of the common Serbians, the working people, and one finds little praise for Peter.

"Serbia wants to become a republic," one army officer said. "The army and the people are tired of the dynasty."

RULER OF SMALLEST STATE

By the death of William Alexander, Grand Duke of Luxembourg, which occurred recently, a demure young woman not yet 18 becomes sovereign of that little principality. She is the late ruler's eldest daughter, the Grand Duchess Marie. Luxembourg is a state of 998 square miles in the angle where Germany, France and Belgium meet. It has about 250,000 people. From time immemorial it has been an appanage of the House of Nassau. It was therefore virtually part of Holland, though separated from it until the death of Queen Wilhelmina's father in 1890. Then it followed the male line to the father of the grand duke just dead. In 1907 the succession in the female line was instituted by a family statute.

At a time, some years ago, when it seemed likely that Queen Wilhelmina of Holland, would be childless, she designated this young grand duchess as heir to the throne of the Netherlands and was about to ask the Dutch states general to pass the necessary legislation to do so. Shortly afterward, however, the hopes of the Dutch people for a direct heir to the throne were gratified by the birth of the little Princess Juliana.

The grand duchess is described as an unusually pretty girl, impatient of advice, quick tempered and impulsive—characteristics which greatly displease the royal busy-bodies who are already occupied in selecting for her a suitable husband.

Held Prisoner All Morning

School Teacher's Visitor Long Occupied Undignified, Not to Say Embarrassing, Position.

The village schoolmaster had incurred the wrath of the mother of one of his scholars, and she arrived at the school and insisted on voicing her indignation loudly and interminably. At first the master tried to pacify her with reasoning, but when at the

end of half an hour there was no sign of abatement of the storm he took her gently but firmly by the arm, guided her right out of the porch, and locked the outermost door upon her.

As master and scholars returned to their work, the sound of angry expletions and of knocks and hammering upon the door reached them from the distance, but the much-tried man took no notice, thinking to himself,

"She will go when she is tired of that."

When at the end of the morning the master went to unlock the door, he found his enemy sitting calmly on the ground, waiting for him with an expression on her face that baffles description. He had shut her skirt into the door when he locked it, and kept her a prisoner all the morning!

Strange Reunion of Veterans.

When Maj. George Edwards Montague Hastings of the British army

finished dinner at the Hotel Astor, New York, he was surprised to find a little gray-haired man in the lobby standing at attention with his hand to his forehead as he passed out of the dining-room. He stopped to learn the reason for the salute and found that the man, Peter Farrell, who is a watchman in the hotel, had fought with him in a battle with the Zulus in 1878 when a majority of the English party was killed. It was the first time the two men had met since the battle.

The two men fairly fell upon each other when they had told their names. For more than three hours they discussed the memorable battle. When they parted both agreed that they wanted to see each other again.

Heading Him Off.

"Mamma, why is it that the women never have any secret societies?" "You are too young to understand, darling—but don't ask your papa or I shall not bring home the box of candy I promised you."
