# Stanton Wins

If you are a motor enthusiast you will hugely enjoy the new serial we have arranged to print, "Stanton Wins," by Eleanor M. Ingram. If you know nothing about motoring or care nothing about the sport you will be captivated by the sheer pitch of excitement and skill of the plot. The author has woven a clever love story around a hair-raising speed contest and through it all there runs a most pleasant glow of mystery and expectation.

A soft trickle of rain for an hour and a half of a Friday night, a mere two-fifths of an inch, and a whole town rises up refreshed and with renewed confidence in the steadiness of the universe. We decide not to sell the farm and move to Saskatchewan or Chihuahua. We order the auto we had decided to forego, subscribe to the minister's salary, and decide to take a vacation trip in August.—State Journal.

#### Clocks Worked by Air

Fans actuated by currents of air have from time to time been used as motors for running clocks. One, by Lepaute, is in the Louvre, Paris. Benjamin Hanks of Litchfield county, Connecticut, patented one in 1783. In a more recent patent the weight is wound up by the current of air in a chimney which is stopped by a self-acting brake as the weight nears the top of its course.

#### The Labor of Baking

In many times reduced if you use the right kind of Flour, and if the question, "What is the best Flour?" was put to vote among the bakers and housekeepers in this part of the country, the unanimous reply would be:

Luck of a Windfall.  
The harsh forest laws of William the Conqueror are responsible for the meaning of good luck now so often associated with the term windfall. Under the Norman it was a criminal offense to cut down timber in the forests; but as the peasants were allowed to gather whatever wood the wind had blown down they always hailed a storm as an omen of good luck.

Substitute for Rubber.  
One of the many proposed substitutes for rubber is obtained from the soya or Manchurian bean, and is being sown in the kidney bean, and is being introduced from Japan and the East Indies into other countries. A rubber-like product that can be vulcanized is obtained by treating the bean with nitric acid, alkalies and great heat.
