SOCIAL CONFLICT.

row's dawn." A ferment spreading from this source, has vitalized this, the great progressive race of human kind, penetrating from individual to individual, and producing results according to its hidden and latent genius. One makes a fund. amental error in supposing that men in general conduct themselves according to the impulse of their passions or desires, rather than obey the dictates of reason. Reason is an uncontrollable faculty, recognizing the ultimate end of humanity, fostering the impulse to action in providing the means to the end. And while the efforts of individuais to accomplish that end, which some secret motive has cherished into a passionate desire, assumes a defiant or ostentatious appearance and the attempt to exalt prerogative above the prevailing principles of the times, clothes this social warfare in a garb apparently unfavorable and sullied with enmity, as the schemes of some, more unfortunate, are inverted, and the world arrogates a cold and partial demeanor,

Yet since not every good they can devide; Reason bids them, for their own to provide.

The independent principle of "common sense" is the true basis of individuality, the proper conception of one's own being, and although many of the changes perfected by the advance of time have had some individual motive, as their propagatory right and justice must have been conspic uous elements, upon which they based their claims, to have received the univer. sal acknowledgement, as necessary and expedient mutations in the affairs of life-Just but a short while ago, the woman, a component part of this human structure was thought to be needless of improve ment, for the fulfillment of her sphere, and the attempt to develop the powers so long dormant, under the potent authority of ages, was thought an inordinate imposition on the rights of man, and as her human nature revolts, as the light of freedom casts its rays over her dwarfish powers, it was thought, even in our me-

mory her imperfections and defects, and now, as her feeble voice appeals to justice, for that right which an assumed authority has so long suppressed, we await with anxious anticipation for the approach of that revolution, beraing, within its folds, peace, virtue and purity, foretelling the deliverence of woman, from out the cloister of her long retire. ment; and as nature aroused her lethargic mind, little did she realize, and not fully does she realize now, the splendor of her unparalleled career, and the grandeur of her destiny, that this social conflict now prepares. The principle, "let well enough alone," is not totaily disregared, notwithstanding the avaricious tendency common to the Americans, a popular fervor is ever prevalent that clings with a tena. cious grasp, to the customs, laws and institutions of the day, viewing these changes which time necessitates, auspicious innovations, ns. making the steps of progress sure and decided made not by the advocation of a few but by the demand of the many, and while the authors of these institutional mutations are compensated with the ingratitude of an unfriendly people, and considered as hostile to social freedom, yet at the consumation of their designs,

"These are they, the world pronounces wise; The world which cancels nature's right and wrong.

And new casts wisdom."

And now, as the contention between the dogmas of creed and theory, revolves into an irrepressible warfare, demanding judgement from every thinking being, and retribution for their struggle, for ordaining the destiny of coming people, let us that our Lachesis, will weave into this web of life, silken threads of wisdom that will hasten the conjunction of science and religion, the two compartments of one great fabrick, and rear the mighty structure to the everlasting glory of man.
