

The Separator that Lasts a Life-Time

BEATRICE Cream Separator

"The man who buys a 'Beatrice' need never buy another Cream Separator."

---Says Farmer Onswon.

It has few parts that can ever wear out. And there's not a single part that can wear out or rust out that is not replaceable.

When the bowl or other part does finally wear out, after many years of use, you don't have to "junk" your machine and buy a new one. You simply buy a new part.

If you should replace every single part that could wear out on your Beatrice, the cost of replacement would be less than \$35.

Isn't that better than paying \$110 or over for a new machine, which is necessary with some separators?

This is just one of the great Beatrice points. The Beatrice is the high-grade, fair-priced separator that you can **CLEAN** in 2 minutes and gets all the cream whether the milk is skimmed hot or cold.

It does not leave even a trace of butterfat in the skimmed milk.

Don't overlook the money saving prices.

600 pounds capacity per hour, or over one gallon of milk per minute,	\$65
800 pounds capacity per hour, or one and one-half gallons per minute,	\$75
1000 pounds capacity per hour, or two gallons of milk per minute,	\$85
