## New Anti-Sub Weapon—the Sea Skimmer

Newest weapon to combat the submarine menace is the sea-skimmer sub-chaser, which hops the waves at 50 miles per hour. It is armed with four depth charges, which can be replaced by torpedoes. Except for the engine and propeller, it is built entirely with non-strategic material—plywood plastic—and can be molded out by the thousands in a short time. As it is not driven by a water propeller it cannot be detected by submarines. Top photo shows the two-man crew at the guns. Bottom photo shows the sub-chaser skimming over the water.

## Grass and Hay

Grass and hay produce such beef and brawn as horses and bullocks possess and yet are unsuitable for humans because the digestive apparatus of the herbivorous animals has become specially adjusted to deal with the coarse fibers of grass, and specially enlarged to cope with the great bulk that must be taken daily in order to secure adequate nourishment. Humans can eat young, tender shoots of some kinds of grass without ill effects, but the hard stalks that cause no inconvenience to a horse would be as damaging to us as the grit a chicken swallows.

Many grass-eating animals like cows and camels have multiple stomachs to help them.
