Synthetic Rubber Industry Achieved Within One Year

Speedy Adoption of Rubber Manufacturing Program Shaves 24 Years From Time Required to Launch New Industry.

By BAUKHAGE

WNU Service, 1343 H Street, N.W., | Washington, D. C.

By the time this is written or shortly thereafter, announcement will be made of the creation of what may become one of the world's greatest industries-synthetic rubber manufacturing. By that time probably ten plants will be assured of operation—the three biggest will make synthetic rubber out of alcohol, which means a market for the farmer's grain.

If the program marches according to schedule, the United States will have achieved within one year what usually takes a quarter of a century to accomplish—the building you can't regiment the American of a new industry.

This is the message that William Jeffers, president of the Union Pacific railway, now rubber administrator in Washington, gave me.

Mr. Jeffers presides at a desk in one of the offices of the War Production board and appears to be one man taken out of the American business world who believes that you can get things done even within the government.

He looks like what he is. A railroad man who came up from the bottom, still carries a union card stocky-bull-necked, slow spoken, a the theoretical, who talks about his "two-fisted" organization of successful "business men" who "know their

I asked him first if he found much difference between working for the gible." government and running a railroad. "Yes," he answered. Then he smiled and took his time before he

went on. "This is a democracy-I suppose looked up. "I make my own decisions. I got that Ford plant overnight." (He engineered the negotiations for the Ford tire manufacturplant in Detroit for shipment to Russia.)

Using What We Have

"I have a top-notch organization of two-fisted businessmen who know we are supposed to do on schedule. On our own schedule. We have the information we want and in a few weeks we'll know just how many plants we are going to have, what their capacity will be and the order in which they will start producing. "My first job," Jeffers went on as

he lifted his 220 pounds and walked around the desk, "is keeping the country on rubber with what we've got. That means reclamation and conservation. Then it's to produce the synthetic rubber we need to keep going for the duration. Meanwhile I watch that stock pile of pure rubber we have, like a hawk.

"Here are the ABC's," he said, motioning me to a chair beside a table on which was standing what looked like an open sample case. It contained a number of bottles and a few other objects properly labeled. He pointed to the first bottle. "This is full of shreds," he said. "It is part of a whole tire, casing and all, cut up." He pointed to the next bottle. "This," he said, "is the same stuff after it has been soaked in oil and acid and the pieces of casing floated out. You can see the pieces of metal in it still." He showed me a screen with pieces of metal on it. "Here is the filter which strains out the metal-a lot of metal gets into a tire." There were a lot of pieces sticking to the bottom of the filter.

"These next bottles," he went on, "show the way the stuff looks after each successive process of refining. And here is the reclaimed rubber," he said as he picked up a black strip. Then he pointed to a new tire leaning against the wall. "This tire is made of reclaimed rubber." I felt it. It seemed normal. I said so. "It isn't as good as the tires you get today," he said, "but it is as good as the ones you got ten years

Rubber Production

two of his job, which is the production of synthetic rubber.

He showed me a yellowish object which felt like rubber. "This is neophrene-synthetic rubber made consumer this year unless more of carbide. It is better than rubber, but it is very expensive."

News Analyst and Commentator. There are two bottles, the contents of which looked just alike to me-a milky substance. One was the pure latex from the rubber tree. The other was a synthetic product made from alcohol of petroleum.

"I am not a chemist," Jeffers said, "and I don't intend to be one. Those are just the ABC's."

He went back to the immediate problem before him, which is to keep America rolling until the synthetic factories start to work. "Are you going to be able to do

that?" I asked. "It is not impossible if everybody plays the game," he said. "I know people and I am not in favor of trying to do it, but when the people understand what we are trying to do for them, I think they will cooperate. I have gotten splendid cooperation already from big business, little business and individuals. It is reassuring to learn how people react when they know what we are doing. I get all kinds of letters-and I answer all of them.

"When the people realize how important it is to help us help them save rubber, they will co-operate. In the last war we had a lot of flags and usually mentions it. He is and parades, went down to the train to see the fellows off with a band. prophet of the practical, skeptical of There doesn't seem to be any of that in this war. It might be a good thing. But when the people realize that the most vital thing in our war effort is saving rubber, we are going to see something tan-

At that point Mr. Jeffers dropped an aside, one of the little human remarks that are typical of him, tinged though it is with a touch of irony-"Maybe if the people didn't the delays are necessary. But I run around so much they could visit haven't had much trouble." He their neighbors and they might make friends and get better friends that way."

Rubber and Economics

"Rubber affects the social life of the people, no doubt-the whole sidestepped the oncoming Axis jug-American economy, rightly or gernaut. He was president of the wrongly, is built on rubber and we League of Nations council in 1935, can't change it. Look at the farm- and in that year voted with the oper. We have to have food. The their stuff. We are going to do what farmer can't go back to the horse throw a switch on Mussolini, en and wagon. If he could get the route to Ethiopia. He is a veteran horses, we couldn't build the wagons of Argentinian statesmanship, pronow. He has to get the crops to foundly learned in International law, market—it all comes back to trans- and political theory, for several Change of Life portation.

rationing is rough justice. It works hardships on some. Some take ad- at last on record-for "the safevantage of it-it's the man who has three gallons more than he needs and uses them to ride around the country that is the waster. But I think we'll get co-operation."

I went back to problem two: the building of the synthetic industry.

"The government will own the plants," I said, "won't that make post-war problems?" He said to me, 'Yes, the government will own the plants and the product will be manufactured on what amounts to a 'management fee' basis. A lot of other things," he said, "will be made under the same conditions."

"But I'm not interested in postwar problems." Jeffers went on, "my job is to help win the war. Unless bugs develop that we can't take care of, we'll do it. And if we do, we'll accomplish in a year and a half what it usually takes 25 years to do."

Co-operation will do that-and keep the country on rubber meanwhile-and co-operation means big business, little business and the folks "who eat in the kitchen" as Mr. Jeffers puts it. "They have the balance of power," he says.

About Wasted Coal

According to the United States Office of the Bituminous Coal Consumers' Counsel bituminous or "soft" coal is the backbone of America. It supplies industry with more than one-half of the power and energy required to produce the weapons of war. Creates nearly 55 per cent of the electricity used in our nation. Heats more than 50 per cent of the homes of America. Four Then we came to part two-part out of five of all the railroad locomotives of the country get their power from bituminous coal. Twenty-five million tons of "soft"

coal will be wasted by the domestic than usual care is exercised in the operation of home heating furnaces.

cisco. The Psychological By-Products of North brought Africa Mount Daily him a lob-

one claw missing. Jack wanted to know about that. The waiter explained that two lobsters had been brought together in a crate from Martinez; that they had a fight and this one lost its claw.

"Take this bum away and bring me the winner!" bellowed Jack.

The quite human desire to string with a winner is manifesting itself in Latin-American countries, and perhaps elsewhere, since the U. S. A. cut loose and started swinging in North Africa. Dispatches from several countries tell of sentiment shifting to the Allies, and away from the Axis. More specifically, Argentina's distinguished hair-splitting legalist, Sr. Enrique Ruiz Guinazu, is caught off dead-center for just about the first time in his long and amiably noncommittal career. As foreign minister of Argentina, he cables to the U. S. A. his felicitations and his expression of Argentina's "solidarity" behind our North African campaign. There is the rumble of the band-wagon as well as of guns throughout the

During the Pan-American conference at Rio de Janeiro last January, gleaners among the senor's learned and bland evasions could not find so much as a straw in the wind. Seven months earlier, he had been elaborately feed at Washington, with state dinners and a big, jovial stag party by the President, and as time passed it appeared that we might not even get our bait back. Our later cultural phalanxes moving on Argentina, seemed equally ineffective. Argentina remained our hardest nut to crack. Perhaps General Eisenhower has cracked it.

Representing Argentina at the League of Nations for many years, Sr. Ruiz Guinazu was an eminent personage in the great academic tournaments which deplored but position when it was proposed to years ambassador to Switzerland. "We'll keep them on rubber. Gas | Cautious and cryptic, although always gracious and smiling, he is guarding and security of the Americas." as he cables Secretary Hull.

> IT WAS nearly two years ago that Robert D. Murphy, then counsel-

Africa, in-Lawrence of North our con- necessary. Africa on the Job sulates," as the cautious little newspaper handouts of the time would have it.

There were subsequent trips which made it clear that Mr. Murphy's interests were not confined to consular efficiency. General Eisenhower supplies additional and final proof in leading the greatest sea and air borne invasion of all timestrategically and politically readied by Mr. Murphy's preparation.

As to the bournous and all the other traditionally romantic fixings of such enterprise, it's quite the reverse so far as Mr. Murchy is concerned. He is a trim-rigged diplomat, whose genial and ready smile, as well as his name, suggests his Irish antecedents. He has been correct and dependable in diplomatic punctilio.

Much of Mr. Murphy's activity seems to have been adroitly political. He rallied Free French adherents everywhere and he made strategical use of American food and clothing supplies. The latter was, of course, denounced as appeasement of Vichy, with an insistence that the supplies would find their way into German hands. The Germans put us right on that, if we were reading their Paris newspaper Aujourd 'Hui, of February 10, 1941. They villified Mr. Murphy as a conspirator working with the DeGaulle

Born and reared in Milwaukee, Mr. Murphy attended Marquette academy and George Washington university. He entered the career service of the state department in 1917. Stationed at consular posts in Europe and Africa, he frequently was entrusted with strategic and a serious condition. With pus forscouting missions. For the preparatory work used for many years. It should be along with General Eisenhower.

DENTAL INFECTION

When we read of the great percentage of recruits rejected for army service we are apt to be dis-

young men. When we read further and find that the cause of the greatest number being rejected is infected teeth we are apt to give a sigh of relief because "everybody has some bad teeth." What we are forgetting, however, is

that, while infected teeth are common

and "apparently" cause little or no harm to the body, it is known to physicians and dentists that infected teeth are the cause of a great many symptoms and even diseases and result in pain and a great loss of time from work. In an article "Dental Infections and the Industrial Worker" in the Journal of the American Dental Association Dr. Ernest Goldhorn, Chicago, states: "Statistics reveal that, regardless of age, sex or economic condition, 80 per cent of the people suffer from one or both of the two classes of dental disease, tooth decay and pyorrhea (inflammation of the gums)." Dental infection has long been recognized as a predispos-

Sometimes an industrial worker will have a fall or slight injury to the joint and the pain and disability which follow is considered due entirely to the fall, whereas infection from the teeth or gums is already present in the joints or in the ends of the muscles moving the joint (fibrositis) and, of course, the injury or fall aggravates the condition.

ing cause of rheumatism, arthritis,

lumbago, neuritis, particularly sci-

On the other hand, a joint that has been injured is often the first spot to which infection from teeth and gums is carried by the blood.

"Dental infections may cause ulcers of the stomach and intestines, colitis, appendicitis, gall-bladder infection and even cancer." Most physicians feel that it would be safe to say that there is not an organ or

Common to Men

Physicians are often asked why it is that men do not undergo a change similar to the menopause in women. Women undergo the menopause and in practically all cases there are some symptoms aside from the stoplor for our embassy at Vichy, started ping of the monthly period. In some on a little publicized tour of North | cases the nervous and emotional disturbances are so severe that care in We Have Had a specting an institution for months becomes

As a matter of fact, men pass through a similar period, but as there are few outstanding symptoms, such as with women, the "change" in men is so gradual that it is not suspected by the individual nor perhaps by his family. The average age for the beginning of the change in men is about 50 but may be years later, and may last for years just as with women.

One common symptom in men is the increase in weight, particularly, in lower abdomen and often a loss of fat and muscle also about the chest and shoulders. Instead of wide shoulders and narrow or medium hips, he becomes pear shaped in appearance.

Other symptoms noted are excessive perspiration, nervous instability, failing memory, irritability, gradual lack of interest in business, lodge, sport and other affairs in which he has always been interest-

Just as women at the menopause suffer with more aches and pains than before, so also do men, although there are not as many cases of crippling arthritis as in women. Other symptoms of the "change"

in men are dizziness, headaches, rapid heart beat, increase in blood pressure, chilliness alternating with excessive perspiration, lack of confidence, lack of concentration, anxiety states, insomnia, mental and physical fatigue, disturbance with urine and bladder due to enlarged prostate gland.

QUESTION BOX

Q .- Other than the discomfort occasioned by sinus trouble has it any serious effects?

A .- Sinus trouble with no nus formation and no complications is not
