Winter Puts Heavy Strains on Every Auto Battery

At zero, Fahrenheit, a fully charged storage battery has only a little more than half its normal power, and a rundown battery will freeze.

And in winter there are fewer long drives to restore the battery's power. When the car stands, the engine and transmission oil congeals and thus more current is used each time the engine is started.

In winter, nothing less than a full powered battery can be satisfactory. Have your battery inspected today. And if you do need a new one, by all means get your Ford battery now —for safety, comfort and economy.
