Imagine your Motor

Constantly immersed in Oil

That, in effect, is what happens when you fill your crank case with Conoco Germ Processed Motor Oil—none of its hundreds of moving parts are ever without lubrication.

A MOTOR OIL, to do a 100% job, must lubricate all the time. That means that it should provide a lubricating film at every stage of motor operation including starting when the engine's cold. In other words, the motor should have a perpetual oil bath.

And that's exactly what happens when you use Conoco Germ Processed Motor Oil for the very good reason that this super-lubricant because of the patented germ process by which it is produced, actually combines with the bearing surfaces to form a film which adheres indelibly. It never leaves the bearings—and that means constant lubrication.

Think of the saving this means to the motoring public! Automotive engineers estimate that from 40% to 60% of the destructive wear and tear on a motor is caused in the starting operation because, with ordinary oil in the crankcase, the moving parts have no lubricating film when the engine is cold—and the oil is not distributed until 5 or 10 minutes after starting. Imagine the abuse to the engine during these periods of running with absolutely no lubrication! No wonder Conoco Germ Processed Oil is hailed as the revolutionizing motor lubricant. Its "carry-over" film has solved the greatest lubrication problem of the day. It assures longer life and smoother operation in any motor where it is used.

And never forget that to produce Conoco Germ Processed Oils the exclusive germ essence principle is applied to only carefully selected paraffin base crudes, resulting in a lubricant with greater film strength, greater adhesiveness, greater tenacity, greater stamina and lower friction than any other oil on the American market.

Draw up to the Conoco Red Triangle and give your motor a perpetual oil bath. Ask for Conoco Germ Processed Motor Oil.
