Why a Washer Having Two Tubs is More Convenient Than ANY Single-Tub Washer

1. Even for a SMALL washing Dexter 'Fastwin' saves handling at least one tub of water, and saves considerable time and work as compared with ANY single-tub washer properly used.
2. Only by the "two-successive-suds" washing METHOD (which is advocated by Good Housekeeping Magazine and which is thoroughly CONVENIENT only with the Dexter "Fastwin") can "grayness" and "harshness" be kept out of clothes week after week without soaking and boiling, or the use of caustics.
3. The Dexter "Fastwin" will wash thoroughly clean at least twice as many pounds of clothing per hour (including all operations from hamper to line) as ANY single-tub washer made.
4. With the Dexter "Fastwin" washing is a CONTINUOUS operation (what business men call "straight line production")—no lost motion. Once the operation is started, the operator of the Dexter "Fastwin" is CONTINUOUSLY occupied with wringing until all of the wash is ready for the line.
5. The Dexter "Fastwin" with its detachable roller-castered tub rack (standard equipment) is a COMPLETE Laundry Unit. The two washing tubs, the rinse tub and basket can be moved as a complete unit by the push of a finger. The operator never has to move more than a step or two between any two operations.
6. NO CHANGING OF WATER DURING WASHING. The first suds in Dexter "Fastwin" takes out all heavy dirt so that even the sixth batch gets its second washing in comparatively CLEAN suds in the second tub of the "Fastwin"—without changing any water.
