

Value of Evergreens with Windbreaks Demonstrated During Past Winter

The tree planting season is here, and Earl G. Maxwell, extension forester at the University of Nebraska, has advised Holt county farmers to plant a row of evergreens 75- to 100-feet North of their windbreaks as additional protection from snow and wind.

Maxwell said the severe blizzards of the past winter demonstrated the value of evergreens with windbreaks. Windbreaks too close to buildings, he said, allowed too much snow around the farmstead and windbreaks without the block of evergreens were not as effective as they could be.

The forester said a good supply of broadleaf trees still are available through the Clarke-McNary program. A planting of only broadleaf trees, if it is wide enough, he said, will keep snow from piling up around buildings.

Trees of several varieties that can be used for the plantings include the Russian mulberry. It grows to a medium height, bushy, limbing close to the ground and is suitable for an outside row in a windbreak. If the trees are planted about six feet apart in a row, Maxwell said, they will in a short time form a dense hedge. He said the Russian mulberry is all right for a single row field windbreak in central and eastern Nebraska.

Other trees available include: Boxelder, Chinese elm, honey locust, black locust, ash, wild plum, soft maple, hackberry and Russian olive.

The only evergreen now available through the Clarke-McNary program is the ponderosa or Western yellow pine.

People wouldn't believe it but it's a wonderful demonstration of what trees will do on the Joe Turay farm, seven miles East and one mile South of O'Neill.

"You ought to see it," says Fred Drayton, who lives across the road. Joe has good grazing land now and there isn't another quarter within five miles that will anywhere near graze cattle at this time.

There was more snow out there than in O'Neill, yet the quarter was clear, while the rest all around it was snow.

It shows that shelter belts need to be wider to do a good job and also need to be back from buildings and roads to

protect them, according to A. L. McMaster, Holt soil conservationist. Fred believes more people ought to plant more trees, and he was in to see the soil conservation service about getting more trees.

Other ranchers and farmers wanting to plant trees this Spring should see the soil conservation service soon about working up a plan for the kind of shelter belt they need. The trees and shrubs should be adapted to the type of soil where the planting is to be made. Some trees will grow on very poor soil where gravel is near the surface while other varieties require better soil. The soil conservation service will help plan a shelterbelt that will give protection in the future.

Fabrics Studied in Extension Club Meet

PAGE — The Page extension club met Wednesday, March 16, at the home of Mrs. J. R. Russell. Five guests, Mrs. H. Farnsworth, Mrs. Neil Asher, Mrs. Dave Bowen, Mrs. George Rost and Mrs. L. C. Rakow, and eight members answered the roll call by reading helpful thoughts, written by the hostess, which were folded and tied with green ribbon, honoring St. Patrick.

The lesson, "Fabrics Old and New," was given by Mrs. Edgar Stauffer and Mrs. Harry Harper. They explained and demonstrated the different fabrics from which all materials are made, such as the natural and synthetic fibers, also fabric finishes such as those that are water repellent, waterproof or grazed and moire finishes. The lesson also dealt on shrinkage, crease resistance, permanent crispness and flame resistant materials.

At the close of the program, Mrs. Russell and Mrs. Jennie Holloway served lunch which carried out the theme of St. Patrick's day.

INMAN LOCALS
Mr. and Mrs. Harry Snyder, of Norfolk, spent Mar. 20 with their daughter and son-in-law, Mr. and Mrs. Lewis F. Kopecny, sr.

Mr. and Mrs. Harvey Tompkins, Linelle and Roger were guests March 20 in the home of Rev. and Mrs. Kenneth Ayres, at Royal.
