Dianne Howard Suffers Broken Collarbone, Broken Shoulder

A hit-and-run driver, believed to have been a young woman driving a 1939 Chevrolet coach, Saturday struck 6-year-old Dianne Howard at the main intersection in the O'Neill business district. The victim, who was knocked flat on the pavement, was removed from the scene to the office of Dr. William M. Finley, where she was treated for a broken collarbone, a broken shoulder, skinned knees, and facial bruises.

The girl is a daughter of Mr. and Mrs. Francis W. Howard, of O'Neill.

The little girl was crossing the south side of the intersection westward with other pedestrians when the vehicle, coming from the west, turned south. The car struck the girl in making the turn. The incident occurred at about 3:45 p. m.

There were several dozen witnesses to the incident, but the car, in which an elderly woman and a child were riding with the unknown driver, left the scene before any identification could be made. Some witnesses said the car was without rear license plates.

The girl is recovering satisfactorily from her injuries and shock.

STUART EDGES O'NEILL 7-6

A weird ninth inning cost the O'Neill Independents their second reversal of the season here Sunday when Stuart towners capitalized on the breaks and won 7-6, avenging an earlier 18-1 defeat.

With two men down and two on in the first half of the ninth, Stuart's shortstop, Kunz, hit the ball to third and reached safely on a hotly contested umpire's decision, tying and winning runs crossed the plate.

UNIQUE COLOR FILM COMING

Vivid, full-color astronomy and natural science scenes are featured in "The God of Creation" sound motion picture to be shown July 23 at the First Presbyterian church, according to an announcement made this week by Rev. Kenneth J. Scott, pastor.

Produced in the West coast laboratory of the Moody Bible Institute by Dr. Irwin A. Moon, "The God of Creation" is the second in a series of evangelistic films. The first film by Dr. Moon was entitled, "They Live Forever."

Early in "The God of Creation" the audience takes a trip to the stars by means of solar photographs taken through the giant 100-inch telescope of Mt. Wilson Observatory in southern California, and views complex gyrations of the solar system, Rev. Scott explained.

Lapse-time photography is utilized later in a study of flower buds developing into full-blown blossoms in a few seconds, the metamorphosis of a caterpillar through the various stages from worm to butterfly, and polination of flowers.

Believed to be the first of their kind are the natural color pictures of photosynthesis, the mysterious food-manufacturing process resulting from the action of sunlight on green leaves. Through photomicrography, the audience peers into the microscopic world of water and observes the complexity of tiny organisms, enlarged more than a million times, Rev. Scott added.
