Sugar Causes Brilliant Leaf Colors of Autumn

It's not an early frost, as commonly supposed, that produces the most colorful autumn leaves, says the United States Forest Service. It's a late frost—and the sugar in the leaf—that gives us the brilliant colors. Just the right combination of temperature and moisture is needed. The best colors come when the thermometer doesn't quite reach the freezing point for several weeks during the latter part of September and through October.

Silviculturists explain that before the leaves fall a layer of cells forms at the base of the leaf, which ultimately loosens the leaf and, when it drops off, forms a scar. If frost doesn't arrive too soon, this layer forms early and quickly. It holds more sugar in the leaf and the sweet sap causes the brilliant reds and oranges and yellows that delight the eye. This is not only true of the gorgeous sugar maples in the north, but of most of the colorful hardwood trees—the oaks, elms, birches, other maples, sweet gum, black gum, hickory, dogwood, and many others. When frost comes too early the leaves dry and lose their sugar before they have time to take on high color.

Work Started on One Will Rogers Memorial

Here, on a promontory of Cheyenne mountain near Colorado Springs, Colo., is being erected a memorial to the late Will Rogers. It will be a 120-foot tower of native pink-gray rock from which visitors may look across rangelands of Colorado, Kansas and Oklahoma. A sodium process light from the tower will be visible for 100 miles. The shrine is the gift of Spencer Penrose, multi-millionaire Colorado Springs capitalist and sportsman, a brother of the late United States Senator Boise Penrose of Pennsylvania.
