

ARM, GARDEN AND HOUSEHOLD

A Great Field of Wheat. Mr. W. R. Shelby, of this city, Vice-President and Treasurer of the Grand Rapids & Indiana Railroad Company has gone to Dakota Territory to superintend the harvesting of a field containing 5,000 acres of wheat...

Apples, and the Way to Keep Them. Use great care in picking them from the trees, and when transferring them from the basket to the barrel handle like eggs. Get the best granulated sugar barrels to keep them in, and when the barrels are full cover them with a thick paper to keep them from the air...

The Characteristics of Wheat. Mr. W. R. Shelby received a small package from the Agricultural Department, which he found to be wheat. It was growing in a field that was not irrigated, and when the grain was cut it was found to be of a different type from the rest, and when the heads were examined they were found to be of a different shape...

Tight Barns for Hay. The general opinion among farmers probably is that barns with air spaces between the boarding are better adapted to cure and preserve hay than barns with very tight boarding and a tight bottom. But this opinion is founded upon the supposed fact that free access of air will assist in carrying off surplus moisture, and prevent heat and fermentation, which supposed fact is not a fact at all, when applied to a body of uncured hay...

Artificial Coloring for Butter. We have tried various preparations for coloring butter, including the ordinary annatto, as kept in the drug stores, and several of the liquids put up ready for use, by different manufacturers. While customers insist on a high color, it is necessary for dairymen to use artificial coloring, and the butter of some cows is so devoid of tint, that it is unsalable without coloring, although the flavor may be faultless. Some people taste with the eye, and for them appearance must be considered. While artificially colored butter brings 7 or 10 cents per pound more in the market, than butter from the cow, coloring material will be used. Carrot juice is objectionable; most of the preparations of annatto are made with potash, and the unprepared paste is difficult to manage properly, although we have procured the finest tints by its use. We have recently tried a preparation made in oil, by Mrs. Smith, of Arch street, Philadelphia, an experienced dairy manager, which gives an unexceptionable tint, and being free from alkali, will be the best preparation those who object to the alkali use.

Artificial Coloring for Butter. We have tried various preparations for coloring butter, including the ordinary annatto, as kept in the drug stores, and several of the liquids put up ready for use, by different manufacturers. While customers insist on a high color, it is necessary for dairymen to use artificial coloring, and the butter of some cows is so devoid of tint, that it is unsalable without coloring, although the flavor may be faultless. We have recently tried a preparation made in oil, by Mrs. Smith, of Arch street, Philadelphia, an experienced dairy manager, which gives an unexceptionable tint, and being free from alkali, will be the best preparation those who object to the alkali use.

House Plants. The time is fast approaching when amateur florists begin to think of their winter window gardens, than which nothing can afford more pleasure to the eye than the display of flowers. Even if you are not much of a grower, you need not despair. Give up flowering plants and vines, depending on leaf foliage. There is that graceful Madeira vine. Start a plant each corner of the window-sill. In the spring, suspend a variety of plants...

—a hanging pot with a little of several things in it. Put in a little "money," or "Tom Thumb ivy," one of the hardier members of the Coleus family, and then add "Dusty Miller." Hang another pot below it in the same way. Indeed, put in as many as you can tastily. On the window-sill below range a file of Florida's knights, anything pretty for its leaves. Put there a sweet-scented geranium. Begonias are pretty for leaf effect, and are reasonably sure to blossom without large doses of sunshine to stimulate them. Your fuchsia won't be likely to flower, but it will run, and its drooping branches will have all the effect of vines. You may do something with the periwinkle, the variegated leaves of which have a fine effect. It will be easy though, to secure a busy base for your pyramid. An ivy going about and over the window will make a rich frame for this pretty picture, while as the side-tendrils of the Madeira vine shoot out, you can swing them in festoons across the window.

"THE ORIGIN OF MAN"

CHAPTER I. "Twas a lovely summer morning, in the year 901 B. C. The woods of Senegambia were clothed in their festive costume, the lovely birds were chirping and singing their morning lays; the sky was one vast sheet of blue—everything, in short, was full of sweetness and light, except the lovely Lady Adaliza de Chimpanzee. She was in the dumps. Moodily she rubbed her shoulders against a huge palm tree, and, while performing this act, heaved a vast sigh. Just at that moment her mamma dropped from the tree above her.

"My daughter," said the Duchess de Chimpanzee, "why that sigh?" "Ah, mamma, look at me," said Lady Adaliza. "See how different I am from the rest of our tribe. See how white I am becoming."

"My daughter," said the Duchess, languidly, as she seated herself on a convenient boulder, "you should be proud of the difference. It is a distinction we are a higher race."

"I little know, mamma, See what little caudal appendages we have. All the other folks can hang from the trees by their tails, but we are compelled to sit on the limbs."

"We are advancing, my dear. You are whiter than I am. You can talk in your mouth; I could not until middle age. Your grandmother, as you know, can only grunt it. You are moving to a higher sphere."

"Well, mamma, none of our folks will marry me," said Lady Adaliza, pouting.

"No, my child; it has been decreed that there should be a selection of the fittest in marriage. We have offered you to the Prince d'Orang Outang, who is even whiter than you are, as his wife."

"Oh, mamma," gushed the Lady Adaliza, "that's splendid! Will he come soon?"

"Restrain yourself. People of high blood and short caudal appendages never get excited. He will be here in a short time."

Gems of Thought.

Women never truly command till they have given their promise to obey; and they are never in more danger of being made slaves than when the men are at their feet.—Farragut.

Talents give a man superiority far more agreeable than that which proceeds from riches, birth, or employment, which are all external. Talents constitute our very essence.—Rollin.

Of all passions jealousy is that which exacts the hardest service, and pays the bitterest wages. It is service to watch the success of our enemy; it's wages, to be sure of it.—Colton.

If rich, it is easy enough to conceal our wealth; but if poor, it is not quite so easy to conceal our poverty. We shall find that it is less difficult to hide 1,000 guineas than one hole in our coat.—Colton.

We live in deeds, not years; in thoughts, not breaths; in feelings, not in figures on a dial. We should count time by heart-throbs. He most lives who thinks most, feels the noblest, acts the best.—Baley.

Misfortune sprinkles ashes on the head of the man, but falls like dew on the head of the woman, and brings forth germs of strength of which she herself had no conscious possession.—Anna Cora Mowatt.

To revenge a wrong is easy, usual, and natural, and as the world thinks, savors of nobleness of the mind; but religion teaches the contrary, and tells us it is better to neglect than to requite it.—J. Beaumont.

It is very singular how the fact of a man's death often seems to give people a truer idea of his character, whether for good or evil, than they have ever possessed while he was living and acting among them.—Hawthorne.

There is no funeral so sad to follow as the funeral of our own youth, which we have been pampering with fond desires, ambitious hopes, and all the bright berries that hang in poisonous clusters over the path of life.—Lander.

Love may exist without jealousy, although this is rare. If a knave knows one, he tells it wherever it is his interest to tell it. But women and young men and young men are very apt to tell whatever secrets they know, from the vanity of having been trusted.—Chastellier.

When clergymen assemble to oppose the introduction of feminine preachers, why do not women also assemble and determine whether in future they will give their sanction to masculine preachers?

That insidious Fox to Wealth. An atmosphere impregnated with the seeds of malaria, is rendered harmless by the timely use of Hostetter's Stomach Bitters; and if a report to this benign protective agent has not been made, the fever it has developed, it will have the effect of checking them and preventing their return. This state of mind is corroborated by thousands who have used this medicine for fever and ague and bilious remittent fever, besides affections of the stomach, liver and bowels, peculiarly characteristic of the West.

Sanitary Influence of Trees. The value of trees in a sanitary point of view in large and overcrowded cities can scarcely be over-estimated. Apart from the sense of relief and coolness which they impart, their influence as purifiers of the atmosphere is almost incredible. It has been calculated that a good-sized elm, plane or lime tree will produce 500,000 leaves, having a united area of 200,000 square feet. The competent authority above quoted proceeds to show that not only do the leaves absorb deleterious gases, but they exhale oxygen. They must, therefore, be of immense benefit in overcrowded and unhealthy districts. When to this is added that trees modify temperature, promoting coolness in summer and warmth in winter; also that they purify the soil below as well as the atmosphere above, we have a very powerful sanitary argument in favor of tree planting.

Brigham Young—Biographical Sketch. The telegraph announces the death of Brigham Young at Salt Lake City, Aug. 29th, 1877.

Brigham Young was born in Vermont, June 1, 1801. He was the son of a farmer; received but little education, and learned the trade of a painter and glazier. He was a member of the Baptist church, and is said to have preached occasionally. In 1827 he joined the Mormons at Kirtland, Ohio; was ordained elder; became one of the twelve apostles, and was sent to the Eastern States in 1835 to make proselytes, in which he was very successful. After the death of Joseph Smith, in 1844, Young was one of the four aspirants for the Presidency, and was unanimously chosen to that office. His choice met general approval, and soon after his rival, Sidney Hedges, was excommunicated. After the tragedy at Nauvoo, Young set out with his followers in 1846 for Salt Lake, which he persuaded them to be the promised land. He founded Salt Lake City, organized the State of Deseret, and applied for admission into the Union. This was denied by Congress, but the Territory of Utah was organized in 1850, and Young was appointed Governor. In 1854, on the appointment of a Governor who was not a Mormon, he defied the authority of the Federal Government, and in 1857 President Buchanan sent Alfred Cumming, whom he had appointed Governor, to Salt Lake, brought by a force of 25,000 men. This brought matters to a crisis, and the Mormons submitted. In 1852 Young proclaimed the celestial law of marriage sanctioning polygamy, which he declared had been revealed to Joseph Smith in 1843. Smith's widow and her four sons at once denounced this as a forgery and headed a schism. But the personal power of Young was such that he had little difficulty in establishing polygamy as an institution of the church.

Always to take the part of an absent person, who is censured in company, so far as truth and propriety will allow.

Never to think worse of another on account of his differing with me in

Convulsions in Children.

Accompanied by want of appetite, slow countenance, and headache, it is indicative of the necessity of using Dr. Williams' Pink Pills. As a general rule, the bowels should be kept regular, and the diet should be simple, and the air pure, and the child should be kept cool.

The Peace of a Household. Is often dependent on the culinary and domestic skill of the housewife. Ladies know this, and in using Dr. Williams' Pink Pills, insure themselves the most perfect health and every possible. Its use is economy, also, and every case is absolutely full weight, and it is strong and pure as to demand the use of a purgative.

Perry Davis' Vegetable Pain Killer possesses a virtue which no other remedy has. It instantly relieves the stomach, gives strength, tone and vigor to the system. It is one of those medicines which is worth more than gold. We advise the good people not to try experiments by using the many new remedies and patent medicines, but to use the Davis Pain Killer. Sold by all druggists.

It is not to be regarded as a trifling ailment, and it is one of the most dangerous of all diseases. It is a disease which is often overlooked, and it is one of the most common of all diseases. It is a disease which is often overlooked, and it is one of the most common of all diseases.
