Teare not if her eyes be black, reached an inhabitable condition. Some of the reasons, however, which lead us to think that Saturn is not an Or blue, or gray, or green, sir,
Or blue, or gray, or green, sir,
Nor if a horrid length of none
Ftick out a feet between, sir.
Enough for me to know that she
Has sot the pilewf tin, sir;
Por each, like charity, will hide
A multitude of sins, sir.

Don't talk to me of ruby lips.

Nor checks like lilies fair, ser.

Nor snowy brow, nor pearly toeth,

Nor flowing golden bair, sir.

The only gold that takes my eye—

For it my spirit bankers—

Is that which jingles in the purse,

And passes at the lankers.

Give me the girl that's got the cash,
A fifty thousand cool, sir;
I eare not if she's young or old,
A Port's or a fool, sir.
Be she as meek as any saint,
Or as the dickens bold, sir,
I'll shut my eyes to every fault,
If she has got the gold, sir.

A NIGHT WITH SATURY.

When the reporter entered the obcervatory of his friend the astronomer our earth. The sun is carrying these on Tuesday night he was surprised to worlds along with it in its flight through hear the man of science, who had leaned back in his observing chair, and was carefully wiping the field lens of an eye-piece, repeating, with an air of ab-

Par from the heart of a vale,

Far from the healthy breath of
morn.

Far from the flery noon and eve's one star, Sat gray-heir d Saturn, white as a stone "Are you going to drop science for poetry?" asked the reporter.

"Oh, no!" the astronomer replied. laughing; "but I should be sorry, in-deed, to be obliged to banish poetry. separate ourselves from these other I'd almost as willingly shut up the observatory and use the telescope for a a world, but of a system of worlds, all stove-pipe. I am not a mathematical machine, and I find as much romance as calculus in the beavens. I don't mean romance as contrasted with reality, but the romance that surrounds the most amazing realities that the haman mind ever grasped. It just occurred to me how strikingly those lines of Keats, intended to describe the old god Saturn in his lonely retirement, represent the actual condition of the us in our illimitable voyage."-N. Y. planet Saturn in its relations with the solar system. There, look at him with his pale, leaden, unflickering light-a star without its twinklings, an almost banished world in its solitude and remoteness, Saturn is so far away in the shadowy deeps of space that the sun, which to us presents a disk as big as long been in favor. At day weddings, the moon, blazing with unbearable

"I have heard that Saturn is now

"That is true," the astronomer reers, can now obtain finer views of the iam Herschel ever had even with his in 1782, went with one of his telescopes to King George's house to show him the crowns are easily covered by two or wonders of the heavens, he offset the three lengthwise box pleats, or by disappointment of a cloudy night by cutting a model of Saturn in paste-board, fastening it at the bottom of the garden wall, and having it illumined with lamps. Herschel says of this device, that the effect was very fine and so natural that it might have deceived the best astronomers. Nobody who has ever seen Saturn with a modern telescope could be deceived by any device of that kind.

telescope," the astronomer added, "and ward low on the left side. If the brim I will point out to you some of the is covered smoothly, wider Japanese things for the study of which astrono- silk passes across it, and is lengthened mers all over the world will seize this into strings. Bits of embroidered velfavorable opportunity."

field of the telescope a golden ball sur- crowns, and also for entire bonnets. rounded by two broad concentric rings, The larger bonnets and round hats are inclined to the line of sight so that their banished from the theater, opera or general outline was a long oval. There church, but are seen on the promenade ball, the color around the pole which wife poke, with its high pointed front, was not hidden by the rings being a is found to be very becoming to young faint blue, while the equatorial zone was ladies, as it displays the hair far back light yellow. The rings, too, bore deli-cate markings, the division between in a picturesque way. These are also them appearing as a heavy black line. easily made at home, as the velvet is Circling outside the rings were several irregu'arly puffed in the frame; but if it of the planet's moons.

tronomer, "and you will see another the risk of spoiling good velvet, it is ring, which is one of the most mysteri- better to buy a felt poke of this shape, ous objects in all the heavens. It is not put a velvet puff on its edge, and two bright, like the others, but dark, re- or three bias bands of doubled velvet sembling a strip of gauze stretched around the crown, with a small faceted against the sky; and yet that gauze-like buckle like silver, gilt or bronze on each ring is 8,000 or 9,000 miles broad, and band, and some clustering plumes on

The reporter saw the mysterious ring, and was surprised to perceive that it was partially transparent. The astronomer explained that this had been accounted for on the supposition that the rings are composed of a multitude of little satellites revolving in about the same plane, and that in the gauze ring these satellites are comparatively so few in number that the ring appears travely so few parent. "But." in number that the ring appears trans-parent. "But," he added, "the fact is we don't know what these rings are, and if anybody is able during the present favorable opposition of the planet to throw any light on the question, all astronomers will unite in thanking him. But there is one strange and startling thing about those rings which possesses especial interest. Some thirty years ago the astronomer Struve collected to the content of the conte thing about those rings which possesses in that capacity, and repaired to Court ago the astronomer Struve collected to get excused. On my name being data which seem to show that the rings called, I informed his honor the Judge are rapidly approaching the planet, and that I was not a freeholder, and, there-will touch it or fall in upon it about the fore, not qualified to serve. "I am

witness it."

"Do you suppose Saturn has any inhabitants?" the reporter asked.

"Well, that's a question that has been a good deal debated." was the reply.

"The possibility of such a magnificent planet being ishabited is something that has been has had a powerful churm for the human imagnation ever since the invention of the telescope. Swedenborg mid figure was inhabited by an upright and mediant rase, and his description of low they lived, taking little care for food, or reimant, but subsisting upon the natural productions of their planet, and beholding those wonderful on the natural productions of their garded as emblematical of intemper-planet, and beholding those wonderful ance, because of its seed ness.—The

to very surface reading. The desired in a Bushington of Sancton physical astronomy, as at present un-derstood, seem to indicate that the inhabitants of the solar system are colreached an inhabitable condition. Some of the reasons, however, which lead us to think that Saturn is not an inhabitable world do not apply to his eight moons. If they have inhabitants. eight moons. If they have inhabitants. a celestial scene tamatehed so far as inhabitants, if there are any, behold the great globe of the planet and the be ore their eyes, and covering a large portion of the firmament.

"The truth is we are not very likely to find out whether Saturn supports any inhabitants or not. At test we can only ascertain whether the planet is in a condition which would make it inhabitable according to our ideas. But, inhabited or not, Saturn must possess great interest for us. Distant as it is, it belongs to the same family of worlds with worlds along with it in its flight through space, and, in a large sense, they all have the same destiny. When we attempt to reach out into the universe with our telescopes, we find it so inconceivably immense that even the most distant members of the solar system seem like near neighbors-companions in our journey through space. If the earth is ever to be destroyed. I believe its ruin will only be a small part of a grand catastrophe which will involve the whole system of which the sun is separate ourselves from these other worlds. We are not merely denizens of obeying the gravitating power of one sun. Like sailors on a ship at sea who gladly welcome the sight of other ships pursuing the same course, though they can communicate with them only by signals, we can derive a sense of companionship, amid the vastness of the universe, from the presence within the range of our vision of other worlds which we know are going along with

Dress Bonnets With Flowers.

There is an attempt to restore flow-

ers to favor as a garniture for bonnets

Prof. Pickmore gave the sixth of his series of lectures on zoo'ogy at the lected upon the inner and smaller planets of which the earth is the shiel, and that the outer and larger planets like Jupiter and Saturn have not jet reached an intelligible of the life and growth of the

of peculiarities of common insects we know in the whole universe is opened | which are not generally known. It was to their view. This is par icularly frue asserted that the dragon fly, or "knitof the satellite which is furthest from ting-needle," as it is sometimes called, the planet, for its orbit is so inclined to is not at all dangerous, but is an inoffenthe plane of Saturn's equator that the sive inset, the long tail of which is but a harmles attachment that has no sting. In fact, the dragon fly was shown to be magnificent rings suspended in space a beneficial sort of an insect, because it destroys gnats and other small flies which are ordinarily a pest to humanity. This same fly has a peculiar construction, the lower jaw being a movable or-gan which reaches out when the animal lesires to obtain food, and brings it to the mandibles, and when not in use for the purpose of capturing food, closes back over the head. The head of the dragon-fly, like that of other insects. seems to be mainly a place for the eyes. the brains of the fly being in the chest instead of in the head. The common centipedes of this country were shown to be harmless, as were the so-called ear-wigs. In the class treated of were included the marine mites, whose stomachs are a series of cells attached to their legs. Other insects were shown to the auditors, which have lungs "from their boots to their hats," as the Pro'essor explained. A number of peculiar bugs of the spider class were shown, where the two anterior

lers had developed into long and deli-

move about readily, as they have six

legs left with which to wa'k. Several specimens of the tarantula and scorpion were exhibited and the difference n their method of stinging explained The tarantula bites, as the rattlesnake does, with a pair of fangs, which are in its jaws. The scorpion's sting, however, is an attachment in the form of a fish-hook at the end of its tail. Among the peculiar things described was the way in which the spider builds and uses its web. The nest is in the center of the spiral web woven, and the lines radiating from this center to the exterior edges are really a telegraphic system by which the spider tells when any le itimate prev walks into its parlor, is entangled, and so becomes food for the wily weaver. The scorpion found on the earth in this region, the Profe sor explained, is a sort of aerial lobster, a fals: scorpion, whose appearance is the form of the leaves and twigs on which they live were shown, and excited much curiosity. These are com-monly known as leaf and stick insects. cause of their peculiar character. The and the most peculiar thing about it shown was the method by which it sheds its old coat and takes on a new one. When the grasshopper leaves its coat it change.

A Swiss Hurricane. Pastor Strasser, of Grindelwald bered in the valley for generations. It began to blow at four o'clock in the time they are so employed. There is morning and went on for nearly twen-ty-four hours with a terrific violence of which those who did not witness its offeets can have no conception. There have been fierce 'fonhe' before, but never anything like this. The heaviest roof stones were blown off like chips: lumps of rock weighing one hundred pounds apiece were sent spinning through the air like cannon balls in a battle. Inside the houses there was no safety, outside nobody could live. Windows were blown in, roofs carried away bodily, and many families fled in terror to their cellars. In the afternoon a few brave men, at the risk of their lives, went on the roofs and tried to repair damages. But it was impossible to de anything. As fast as they replaced the stones they were dislodged and several of the men thrown to the ground. By "I believe an but I'd like to know and destroyed the newest and stronghow you came by it.
