

THE CLOUDS
The engineer of the Star printing establishment soon after starting the steam engine on Tuesday morning noticed a white patch on the inner surface of the fly-wheel, which he thought was a piece of paper caught by one of the spokes in its flight round and round by the wheel. The white patch was noticed by several of the hands during the morning, who accounted for it in the same way, but no attention had been specially given to the matter when the engine was stopped shortly after noon. As the wheel stopped the engineer was surprised to see the white spot fall to the ground and then get up and crawl away. He then for the first time became aware that the white spot which had been whirling on the fly-wheel was a cat, which had been clinging to one of the spokes of the wheel, and had only relaxed its hold when the wheel had come to a standstill. The cat seemed dazed for a while, and was taken into the street for fear it here it remained perfectly still for a considerable time, but an attempt being made to cover it with a paper, it ran off in a zigzag course, but apparently as fully alive as ever.

How Watch Cases are Made.
A plate of solid gold 14-18 karats fine is selected on each side of a plate of hard nickel composition metal, and the three are then pressed between polished steel rollers. From this plate the various parts of the case—backs, centers, bezels, etc.—are cut and shaped by dies and lathes.
