> Inherited Diseases. No fact of nature is more pregnant

with awful meaning than the fact of the inheritance of disease.

Modern science, which has illuminated so many dark corners of nature, has shed a new light on the ominous words of the Scriptures, "The sins of the fathers, shall be visited upon the children unto the third and fourth generation." unto the third and fourth generation."
Fifty per cent. of cases of consumption, cancer and scrofula, run in families through inheritance. Insanity is hereditary in a marked degree, but, fortunately, like many other hereditary diseases, tends to wear itself out, the stock becoming extinct. A distinguished scientist truly says: "No organ or texture of the body is exempt from the chance of being the subject of hereditary disease." Probably more chronic diseases, which permanently chronic diseases, which permanently modify the structure and functions of the body, are more or less liable to be inherited. The important and far-reaching practical deductions from such facts— are obvious to reflecting minds, and the best means for preventing or curing these diseases is a subject of intense in-terest to all. Fortunately nature has provided a remedy, which experience has attested as infallible, and the remedy is the world-famous Swift's Specific, a pure vegetable compound—nature's antidete for all blood poisons. To the afflicted it is a blessing of inestimable value. An interesting treatise on "Blood and Skin Diseases" will be mailed free by addressing mailed free by addressing
