Ammonia and Alum in Baking Powders.-How to detect

In view of what the Minnesota Senate has done, it is hoped that legislative bodies in other states will soon take up the subject of food adulteration. The subjoined list of baking powders containing ammonia and alum, compiled from official reports and published in a recent number of the Scientific American, is given below. "It deals in a direct manner with an exil which must be contained. manner with an evil which must be cut down" said the Chicago Tribune in com-menting on the Scientific American report. Following is the list of

Is wholly in using Dr. Price's Cream Baking Powder. The only pure Cream Tarter Powder sold on the market. Other brands contain either ammonia, alum or some other adulterant. Ammonia or alum powders dry out, make the dough too porous, leaving a bitter taste, etc.

No agency has assisted so much toward perfection in cookery as Price's Cream Baking Powder. Its ingredients are simple and so blended as to exist in exact chemical proportions, so after use there is never any excess of either left in the food. Hence there can be no impurities whatever left in the finished food. No bitter taste, no taint of ammonia, but food raised with Dr. Price's Cream Baking Powder partakes the natural sweet flavor of the flour and keeps moist and fresh for days. This powder possesses qualities peculiar to it alone. No other makes such delicious pastry. No other contains the white of eggs.
