You will Find our stock complete in every line, and we will be pleased to serve you in such a manner as to hold your trade in the future.  
Headquarters for Men and Boys Shoes!  
**Chas. Wiener,**  
THE CLOTHIER.

### WEATHER FORECASTS

Furnished Expressly for The Chief for Webster County

(Copyrighted by W. T. Foster.)  
ST. JOSEPH, Mo., Sept. 29.—My last bulletin gave forecasts of the storm wave to cross the continent from October 1st to 5th and the next will reach the Pacific coast about October 6th, cross the western mountains by close of the 7th, the great central valleys from 8th to 10th and the eastern states about the 11th.

This storm will develop its greatest force in the Missouri and Mississippi valleys on the 8th to 9th, and the cool wave following it will bring killing frosts to large portions of the cotton country.  
The warm wave will cross the western mountains about the 6th, the great central valleys about the 8th, and the eastern states about the 10th. The cool wave will cross the western mountains about the 9th, the great central valleys about the 11th and the eastern states about the 13th.

October weather will not be extreme, and winter will not come early. Indian summer will be the rule, and the greatest rainfall will occur from 9th to 21st. The most severe storm will be about the 9th in the Mississippi valley. The last third of the month will average warmer than the middle third.  
The weather conditions for the first half of 1894 will be full of energy, and the crop season will be almost a total change from that of 1893.

**CLOGS TO PROGRESS.**  
The discussion of sun spots involves a basic principle underlying weather changes, and in laying down these principles I must antagonize our great teachers. Progressive minds are seldom found among that class whom the world calls great scholars. Blasting, ruinous, monstrous errors, because of the products of our universities, continue to usurp positions that should belong only to the truth.

Egregious errors could not long continue to rule were it not for the book worms, the fine scholars, that have no independent being, but are mere machines, grinding out the false teachings they have imbibed. That is the powerful class, backed by the more powerful prejudices of custom, which truth must ever meet and slowly overthrow.

Fortune has favored mankind in that Edison never saw the inside of a university, for there he would have been taught that his vague ideas were wholly impracticable. This same remark is often applied to Ben Franklin. R. Heber Newton says: "The scholars of Italy were intolerant of the demonstrations of Galileo, and the professor of philosophy in Padua refused to look into the telescope, lest he be convinced that Galileo was right. When Harvey discovered the circulation of the blood he had to face the reasonless intolerance of the learned brothers of his profession, and during his day the College of Physicians of London ignored his discovery. Almost half a century after his great discovery, the Royal Society of Medicine of Paris listened attentively to a long scholastic argument which attempted to prove the theory of the circulation of blood an impossibility. Shouts of derisive laughter are said to have greeted Benjamin Franklin's report before the Royal Society of Great Britain in which he showed the identity between lightning and other electrical phenomena. Galvani, the original thinker and great electrician, complained that he was as-

sailed by two classes, the scientists and the know-nothings. Both alike ridiculed him.

Napoleon referred the subject of steam navigation to the Academy of Science, and the idea was pronounced a ridiculous notion. The British house of commons refused to listen to a plan for railroad travel.

Prof. Young, the author of our university text books on astronomy, and president of the College of New Jersey, declares that Jupiter has no influence on sun spots, and on the same page gives positive proofs that it does. He sees through the blinding glasses given him in the universities, and therefore cannot see that which is as plainly visible as the noon-day sun.

There is no mystery about the sun spots, and if we can come down to common sense ideas, we can readily see that they result from a universal law. Our astronomers have erred in rejecting planetary influences because the perihelia of Jupiter do not agree with sun spot maxima. They started out with the idea that the sun is in an unnatural condition when it is covered with spots, and therefore the spots are caused by some particular position of the planets. The reverse of this is true. Spottedness is the natural condition of the sun, and the obliteration of the spots is a result of certain position of the planets.

This idea has never entered the mind of one of our university-taught astronomers, has never before been presented to the public. It is a most important point, and I want to impress it on the mind of my readers.  
If there were no planets moving around the sun, it would always be covered with spots, because its atmosphere would be much less expanded than it is now. When our moon is near, or moving towards perigee, we have the least amount of rain, because the atmosphere is then absorbing moisture. This principle can be illustrated by the laws governing electrified bodies.

Electricity evaporates all substances. A light charge evaporates water, currents decompose and carry away metals and minerals. Static electricity remains on the outside of spheres, and when two spheres approach each other, the electric charge of each recedes to the opposite side of each, and there becomes more dense, deeper, of greater tension, and therefore of greater effect in evaporating matter.

By this law we see that the sun's atmosphere expands, its cloud belts increase by evaporation, thereby enveloping the sun spots, holding from view the dark body of the sun, when the planets approach the sun at perihelion.

During October Jupiter will rise in the northeast not far from 9 p. m. He is near heliocentric longitude 52 and will be in opposition November 17th, then rising at the same time the sun sets. He is nearing the plane of the sun's equator and will pass through that plane—over the sun's equator—April 3d, 1894. He was at perihelion in 1892, and will be at aphelion in 1898. Jupiter has more influence in obliterating sun spots than do any other two planets. His diameter is about 11 times that of the earth. He has had much to do with the droughts of the last three years.

From March 1st to September 24th the excess of rainfall at Charleston, South Carolina was 15.62 inches; at Savannah, Georgia, 7.89 inches; at Jacksonville, Florida, 7.78 inches; at Cairo, Ill., 7.28; St. Louis, Mo., 5.67; Olympia, Washington, 9.33; Los Angeles, California, 3.64; Springfield,

**Absolutely Pure**  
A cream of tartar baking powder. Highest of all in leavening strength—Latest United States Government Food Report.  
Royal Baking Powder Co.  
106 Wall St., N. Y.

Ill., 3.66. For the week ending September 24th, nearly ten inches of rain fell at Mobile.  
The coming winter is expected to be an average, not extremely cold nor open. There will be enough cold however to make good ice.

From March 1st to September 24th the deficiency of rainfall at Eastport, Maine has been 11.2 inches; at Baltimore, Maryland, 10.91 inches; at Raleigh, N. C. 10.63; Key West, 10.37; New Orleans, 12.80; Corpus Christi, Texas, 11.74; Indianapolis, Ind., 7.25; Toledo, Ohio, 7.85; Chicago, 6.58; Duluth, Minn., 6.30; Dodge City, Kansas, 8.72; Abilene, Texas, 5.59; Rapid City, South Dakota, 8.26.

### See the World's Fair for Fifteen Cents.

Upon receipt of your address and 15 cents in postage stamps, we will mail you prepaid our souvenir portfolio of the world's Columbian exposition, the regular price is fifty cents, but as we want you to have one, we make the price nominal. ### School Report of Dist. 24.

Report of Dist. 24 for the month ending September 24d, 1893.  
Number enrolled 18.  
Those not absent,—Flora and Jessie Godwin, Arthur and Dora Lacy, Dean and Nellie Norris.  
Those not tardy,—Flora and Jessie Godwin, Bessie and Adda Adamson, Edith Edson, Georgia Wilder, Arthur and Dora Lacy.  
Those who did not whisper,—Adda and Georgia Adamson, Flora and Jessie Godwin, Edith Edson, Bessie Wilder, Ethel Brubaker, Nellie Norris.  
Average Attendance 14.  
Mrs. C. C. BORN,  
Teacher.

### A Good Thing to Keep at Hand.

(From the Troy (Kansas) Chief)  
Some years ago we were very much subject to severe spells of cholera morbus; and now when we feel any of the symptoms that usually precede that ailment, such as sickness at the stomach, diarrhoea, etc., we become scared. We have found Chamberlain's colic, cholera and diarrhoea remedy the very thing to straighten one out in such cases, and always keep it about. We are not writing this for a pay testimonial, but to let our readers know what is a good thing to keep in the house. For sale by Devo & Grice.

There can be no such thing as the right use of a wrong thing.

There are always some rare bargains at the meat market.

Polishing a coal's head never makes his heart any whiter.

In an age of fraud and adulteration, it is certainly gratifying to know that such an extensively-used preparation as Ayer's Sarsaparilla may be implicitly relied upon. It never varies either in quality, appearance, or effect, but is always up to the standard.
