

Chronic Nervousness

Could Not Sleep, Nervous Headaches.

Gentlemen: I have been taking your Restorative Nerve for the past three months and I cannot say enough in its praise.

Saved My Life.

For I had almost given up hope of ever being well again. I was a chronic sufferer from nervousness and could not sleep.

Dr. Miles' Nervine Cures.

Dr. Miles' Nervine is sold on a positive guarantee that the first bottle will benefit.

OLDEST AND ORIGINAL Dr. WHITTIER

10 WEST NINTH STREET, (NEAR JUNCTION.)

KANSAS CITY, MISSOURI.

Nervous Debility

With its Many Uloomy Symptoms Cured.

Lost Vitality

Perfectly and Permanently Restored.

Syphilis

Cured for Life Without Mercury.

Urinary Diseases

Quickly Relieved and Thoroughly Cured.

Why

Is Dr. H. J. Whittier invariably successful? Because he makes no promises that he cannot fulfill.

FREE CONSULTATION.

Office hours—9 to 4 and 7 to 8, Sunday 10 to 12.

Guide

To Health and Emergencies for 6 cts.—stamps to prepay.

Call or address in strict confidence.

DR. H. J. WHITTIER,

10 West Ninth Street, Kansas City, Mo.

What He Was Afraid Of.

He was from the back counties of Virginia, and he had made his first trip away from home with a lot of cattle to New York.

"Where's the boss of this boat?" inquired he of the first officer he saw.

"Not very."

"Air we safe?"

"Perfectly."

"They ain't no danger of a tree blowin' in down and mashin' in the roof, is they?"

The officer laughed, but he saw the man was serious.

"That's all right," he said, humoring him.

"Much obliged, mister," responded the passenger in the most grateful way.

"You see, I wuzn't shore, and it makes me kind of squirmy not knowin' how it wuz in these parts."

"Ain't the wind blowin' mighty hard?"

"Not very."

"Air we safe?"

"Perfectly."

Weather Bulletin.

(Copyrighted, 1895, by W. T. Foster.)

ST. JOSEPH, Mo., June 15.—My last bulletin gave forecasts of the storm waves to cross the continent from 19th to 23d.

This storm wave will be preceded by a very warm period, excessive evaporation and drouth, and following it will come very much cooler weather with a large increase of rain and good crop growing weather in numerous and extensive parts of the United States.

This and the preceding storm will be above the average in force and high winds may be expected.

The warm wave will cross the west of Rockies country about 24th, great central valleys 26th, and the eastern states 27th.

Cool wave will cross the west of Rockies country about 27th, great central valleys 29th and eastern states July 1st.

Indications favor sufficient rain in most parts of the corn belt to make a fair corn crop, and the only probable drawback is the expected low average in the temperatures.

Indications are that the last part of June will be warmer than the first part, but altogether the temperature will average below in the great corn producing section.

The same conditions of temperature are expected for July and August, averaging very cool in the Missouri, Ohio and upper Mississippi valleys with a fair amount of rain.

The drouth and hot weather of April and May were correctly foretold and an average of cool weather, though accompanied by some very hot days, and an average rainfall for the three principal corn months may be relied on with a reasonable degree of certainty.

Killing frosts will come early, not long after September 16th, in large portions of the corn producing country, and farmers should finish their plowing early in order that the corn may mature early.

The above, in reference to the corn crop, applies only to the north part of the country drained by the Mississippi river and its tributaries.

In his new book, Holley says that light is reflected magnetism and electricity is condensed magnetism, identical with the light during the passage of the latter through the dark ether of space.

The history of scientific progress shows us that the paths of learning are not always the paths of knowledge.

Electric lighting has so far advanced that light can be made without heat, and this again illustrates the fact that sunlight is not heat.

Tesla has succeeded in lighting a room without an electric lamp, without a wire and without a conductor other than the atmosphere, and has fairly proven the electro-magnetic theory of light.

Oxygen and nitrogen are the principal gases that constitute our atmosphere, the former being greatest in proportion near the earth's surface and the latter increasing as we ascend into the atmosphere.

Oxygen, Faraday says, is a magnetic substance, its magnetism being in proportion to its density. Reduced to a solid it would be a powerful lodestone.

Faraday says: "If a copper disk, suspended by a long string, is set whirling and is then introduced into the field of an electro-magnet, its motion will be instantly arrested and it cannot be further rotated in the field."

These laws of magnetism must be understood and applied to our earth, planets, sun and moon as magnets, if we would know the laws that govern our weather changes.

Remarkable statements are made in the New Science Review, published in London and New York and among the most ably edited scientific periodicals.

Here are the statements: "When the iron bridge at Coalbrookdale was in course of construction a wandering musician, who had been refused alms by the workmen, threatened to 'fiddle their bridge down' unless they gave him money."

At first the men only laughed, but in less than a quarter of an hour the player had found the particular note with which the bridge was harmonically in sympathy, and

Do You Catch the Idea? Climax Plug It's Lorillard's. A chewing tobacco made to please a universal taste, must be prepared from the highest grade leaf, with a skill that can only be acquired by the longest experience.

Dismal Hollow, Missouri.

Beautiful rain and lots of it. Wheat harvest is the order of the day; winter wheat is good.

Ruben Bunch was looking over his farm yesterday.

A. Calmes has the finest piece of corn in Howell county this year.

W. Street will have over 200 bushels of peaches and about the same amount of apples.

Laura Mossgrove was visiting at Mr. Edmond's one evening this week.

Jack Wilson of Buckhart was in this neighborhood on the 3d.

A Valuable Find. After years of study an labor, there has at last been discovered a rare and never-failing remedy.

Major General Drayson of England, who stands high in scientific circles as an authority, has offered a theory, backed up by substantial proof.

It explains many heretofore unexplainable facts in geology and astronomy. It accounts for the apparent places occupied by stars which heretofore could not be calculated.

For the rise and fall of continents and the waters of the oceans, the precession or falling back in the dates of the equinoxes and the slowly changing plane of the earth's equator.

Without the aid of this discovery astronomers could not take the position of a star as recorded one hundred years ago and correctly calculate its position today.

There was an irregular unknown movement among the stars, supposed to be caused by the movement of our sun and its attendant system through space.

Which was so degrading the position of these bodies as to defy correct calculations.

This discovery explains the ice age satisfactorily, while all the theories of scientists on that question have been untenable.

This discovery of General Drayson was published twenty-two years ago, but was generally discredited till recently.

Orthodox scientists would have nothing to do with it because their theories would not permit.

But a large number of funerals began to let in light, and General Drayson's discovery is attracting wide attention.

The earth has a second rotation around an axis six degrees south of the geographical north, and six degrees north of the geographical south poles.

In which time the north pole vibrates twelve degrees north and south, causing an ice age about the north pole when the vibration is north and about the south pole when the vibration is south.

This is a most interesting subject and will be further explained in these scientific notes.

While in Topeka last March, E. T. Barber, a prominent newspaper man of La Crosse, Kan., was taken with cholera morbus very severely.

THE BOOK OF "THE FAIR."

By H. H. Bancroft, "The Historian."

A work of One Thousand Imperial Folio pages, twelve by sixteen inches, printed on the finest enameled paper, on the Miehle press, as exhibited in Machinery Hall.

This work contains Twenty-five Parts Forty Pages Each.

There will be over 2,500 SUPERB PICTURES of all sizes up to a full page. A chapter on Fairs of the Past

From the Crystal Palace of 1852 to the Paris Exposition of 1889. The Exposition was but for a moment while the book is for all time, and

Should be in Every Home

Sold by subscription only, on easy payments of 6 1/2 cents a day. For further particulars apply to

WHY "No. 9" ARE HEELER & WILSON'S SEWING MACHINES POPULAR? BECAUSE LADIES BUY THEM LIKE THEM AND TELL THEIR FRIENDS.

Many ladies have used our machines twenty to thirty years in their family work, and are still using the original machines we furnished them a generation ago.

Many of our machines have run more than twenty years without repairs, other than needles. With proper care they never wear out, and seldom need repair.

We have built sewing machines for more than forty years and have constantly improved them. We build our machines on honor, and they are recognized everywhere as the most accurately fitted and finely finished sewing machines in the world.

Our latest, the "No. 9," is the result of our long experience. In competition with the leading machines of the world, it received the Grand Prize at the Paris Exposition of 1889, as the best other machines receiving only complimentary medals of gold, silver and bronze.

The Grand Prize was what all sought for, and our machine was awarded it.

Send for our illustrated catalogue. We want dealers in all unoccupied territory.
