Eye and Eye Glass Care...

LET us pilot you out of the misery and danger of overworked and improperly treated eyesight into the rest and satisfaction of restored vision. We understand **Eyes and Eye Glasses**—our business to fit the one to the other. We know the Eye and its needs—we know the dangers that follow in the wake of defective Eyes and strained vision. Our knowledge of the Eye and practical experience in the fitting of Glasses is at your service. We examine your eyes thoroughly, scientifically; tell you their exact condition, advise you what to do and grant you the privilege of doing as you please.

EYE CARE.
Waiting and hoping never betters ailing vision—procrastination is the thief of good eyesight. The change which comes to the eye are beyond the power of the individual to remedy. Neglect to give eyes proper and timely care is responsible for much of the present day eye trouble.
A very little strain upon this delicate structure soon exhausts its delicate nerve force. When the eye first troubles, the man of sense knows there is need of help, and straightway gets it.
Let us aid you to better vision or the preservation of what remains.

EYE GLASS CARE.
A little way from right is a great way wrong with eye glasses and spectacles. We make a study of individual needs and fit frames and lenses with exactness. Every appliance science has devised is at our command.
Every pair of glasses must precisely suit the wearer and us.
Each lens, each frame, is thoroughly inspected. If there is flaw or blemish it is discarded. Your eye glasses are as important as your eyesight is important. Here the skill, the will and the facilities to make them so.

EYES EXAMINED. GLASSES FITTED.

There has been considerable discussion about the manner of planting alfalfa. Some say to plow deep, while others favor fallow-plowing the ground—that is, 6 inches with each plow, making a total of 12 inches. The writer has experimented with it and finds that any soil in the western country, except sand, will dry out during the fall months as deep as plowed. New land was broken to sow the next spring and it was well rotted. An unbroken square of about one acre was left in the middle, and at sowing time in April part of it was backed and harrowed and the middle square broken and disked, after which it was all sown and harrowed. It all came up alike, and an extra stand, and in one year you could not see the difference in land.
